FlameTools Software for Desktop Computers
FlameTools Software for Palm™ powered PDA's
Communications Interface Kit

Increase the Possibilities

When used in combination with your Palm™ powered
PDA and IRIS FlameTools Software

WORLD LEADER IN FLAME MONITORING

FlameTools for Desktop Computers

For IRIS Models P520, P522, P531 and P532 Signal Processors.

For Computers running Windows 98, ME, XP, NT4 and Windows 2000 in a remote location such as an office or control room.

The user friendly graphical interface provides intuitive representation and configuration options for settings and outputs.

Features

- Flame Strength display: numeric, graphic or spreadsheet
- Displays multiple devices and channels simultaneously
- Configuration control: easy to use slider controls
- Data logging: saved to spreadsheet
- Filter wizard: automatically save and compare flame readings for all filter settings
- Configuration save: save the configuration of connected devices to spread sheets
- Spread sheet: compatibility is integrated into all aspects of FlameTools
- Automatic device detection: for serial ports and virtual serial ports

FlameTools for Palm™ powered PDA's

For IRIS Models P520, P522, P531, P532 700 and 800 Signal Processors.

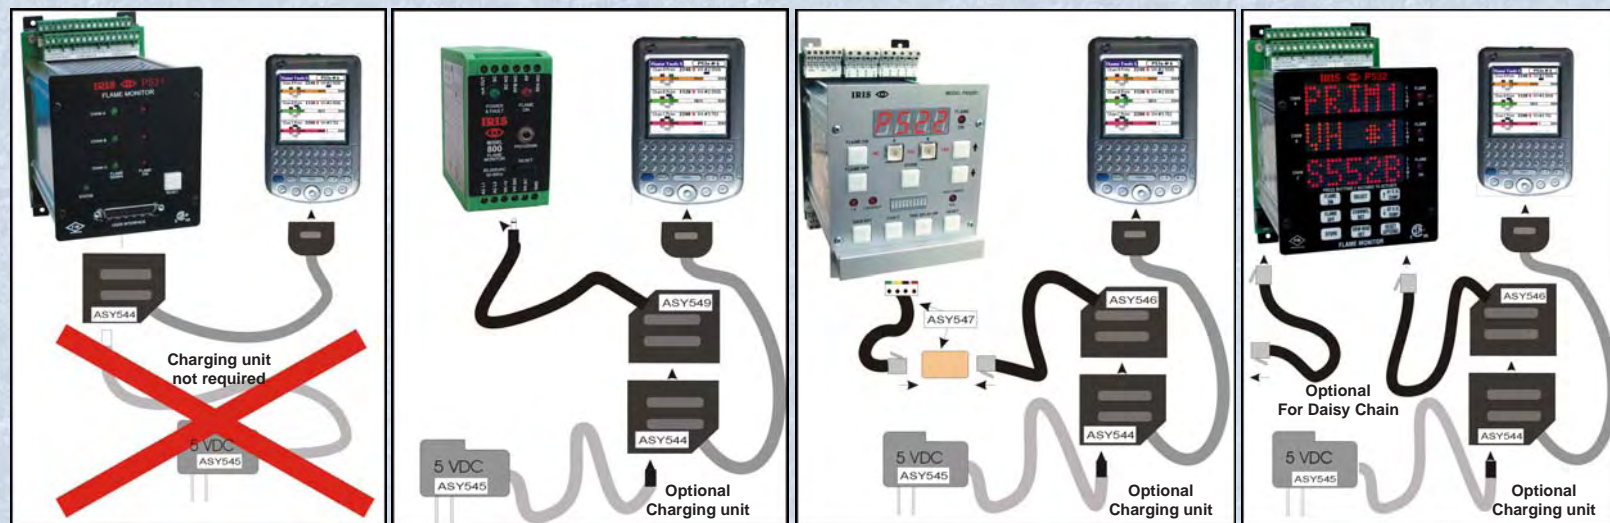

This version of FlameTools software is designed to run on the Palm Powered™ PDA (Personal Data Assistant) with a serial EIA-232 port. The small size and battery power (4 to 6 hours on a full charge) makes this a fully portable alternative.

Features

- Flame strength and characteristics: Proportional representation of UV and IR on dual scanners.
- Displays 3 channels (or 3 devices for single channel devices) simultaneously
- Complete control over device configuration.
- Continuously save maximum and minimum flame readings with time stamps
- Automatic gain adjustment
- Filter wizard: automatically save and compare flame readings for all filter settings.
- Configuration save: save the configuration of connected devices with time stamp included.
- Configuration restore: restore saved configurations to devices
- Restore a single processor or an entire category (loop) of configurations.
- Multiple configurations can be saved, adjusted and restored.
- Global adjust: Set one (or more) parameters to identical values for all units connected to on a loop

IRIS COMMUNICATIONS INTERFACE KIT FOR PALM POWERED™ HANDHELDS

Connects Palm Powered Handheld PDA to IRIS Models P522, P531, P532, 700, and 800 Signal Processors to provide setup and monitoring functions.
