

Thank you for selecting Precision Digital's MeterView Pro Software.

NOTICE: This software **requires** the purchase/use of a Precision Digital serial adapter in order to use MeterView Pro with a PROVU meter. Please visit predig.com/mvpro for complete requirements before or after downloading the software.

Installation Instructions:

1. Ensure you have administrative privileges (logged in to Windows as an administrator) before attempting to download or install the program.
2. Download the latest version of MeterView Pro
Note: Download MeterView Pro Version 1.02 for PROVU models with firmware 2.000 and 2.100
Download MeterView Pro Version 2.00 for PROVU models with firmware 2.200 or greater.

To determine the software version of a meter:

- Go to the Diagnostics menu (**D** **▲** **▲**) and press Enter button.
- Press Up arrow button and scroll to Information menu (Info **I** **n** **F** **o**).
- Press Enter to access the software number (**S** **F** **E**), version (**V** **E** **r**), and serial number (**S** **n**) information. Write down the information as it is displayed. Continue pressing Enter until all the information is displayed.
- The meter returns to Run Mode after displaying all the settings.

3. Save the (.zip) package to the location of your choice.
4. Open the saved (.zip) folder and double-click the MeterView Pro (.msi) file to begin the install.
5. Follow the installation steps through to the Finish dialog (at which point you will have the option to launch MeterView Pro, or complete the installation process without program launch).
