GLOSSARY OF TERMS:

Adjustable Set Point	The upper and lower limits between which the set point can be fully (100%) adjusted.
Max Over Range Pressure	The maximum pressure to which a pressure sensor may be continuously subjected without causing damage and maintaining set point repeatability.
Max Working Pressure Range	The pressure range in which two opposing sensors can be safely operated and still maintain set point provided the difference in pressure between the low and high side does not exceed the designated adjustable range.
Display Resolution	The sensor range tables provide the display and set-point decimal point resolution along with units of measure and are specific for each range.

[1] The upper and lower limits between which the set point can be fully (100%) adjusted.

[2] The pressure, differential pressure or temperature value that models will operate up to before indicating an over range pressure, differential pressure or temperature has been reached, and executing the safe shutdown feature.

[3] The maximum pressure or differential pressure to which a sensor may be occasionally subjected which causes no permanent damage to the sensor.

[4] The resolution of the display for set point value and decimal place for standard (psig, psid) and optional ("wc, "wcd, bar, bar d, KPa, KPa d, kg/cm², kg/cm² d) units of measure. Please note units of measure exceptions in the range tables above.
