Legal information

Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

DANGER

indicates that death or severe personal injury will result if proper precautions are not taken.

MARNING

indicates that death or severe personal injury may result if proper precautions are not taken.

▲ CAUTION

indicates that minor personal injury can result if proper precautions are not taken.

NOTICE

indicates that property damage can result if proper precautions are not taken.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified Personnel

The product/system described in this documentation may be operated only by personnel qualified for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions, Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

▲ WARNING

Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens, Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.

Trademarks

All names identified by ® are registered trademarks of Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

Getting started

1.1 Commissioning the device without display

Introduction

In this section, you will learn how to commission the device step-by-step.

Before you start, please read the following safety information:

- General safety information (Page 19)
- Basic safety information: Installing/mounting (Page 23)
- Basic safety information: Connecting (Page 37)
- Basic safety information: Commissioning (Page 45)

Read the entire device manual in order to achieve the optimum performance of the device.

Procedure

- Mount the device.
 Installation (except level) (Page 27)
 Installation (level) (Page 30)
- Connect the device.Connecting the device (Page 41)
- 3. Switch on the power supply.
 Switching on the supply voltage (Page 46)

1.2 Commissioning the device with display

Figure 1-1 Top view

5. Operate the buttons as follows:

Apply lower range value (with pressure applied)	Hold down the button \bigvee for 3 seconds.
Apply upper range value (with pressure applied)	Hold down the button A for 3 seconds.
Zero point adjustment	Hold down the buttons \(\) and \(\) for 3 seconds.
Set Upper fault current	Hold down the button ◀ for 3 seconds.
Set Lower fault current	Hold down the button for 3 seconds.

Further functions are available via remote operation (e.g. SIMATIC PDM).

1.2 Commissioning the device with display

Introduction

In this section, you will learn how to commission the device step-by-step.

Before you start, please read the following safety information:

- General safety information (Page 19)
- Basic safety information: Installing/mounting (Page 23)
- Basic safety information: Connecting (Page 37)
- Basic safety information: Commissioning (Page 45)

Read the entire device manual in order to achieve the optimum performance of the device.

Procedure

- Mount the device.
 Installation (except level) (Page 27)
 Installation (level) (Page 30)
- Connect the device.Connecting the device (Page 41)
- 3. Switch on the power supply.
 Switching on the supply voltage (Page 46)
- 4. Open the cover of the buttons:
- 5. Further functions can be found in the operating instructions.
 - Set the measuring range.
 - Set the pressure unit.
 - Set the application of your device.
 - Set the scaling points.
 - Set the zero point.
 - Lock the device.
 - Enable Functional Safety (for devices with Functional Safety).

1.2 Commissioning the device with display

Introduction

2.1 Purpose of this documentation

These instructions are a brief summary of important features, functions and safety information, and contain all information required for safe use of the device. Read the instructions carefully prior to installation and commissioning. In order to use the device correctly, first review its principle of operation.

The instructions are aimed at persons who install and commission the device.

To realize optimum performance from the device, read the complete operating instructions.

2.2 Document history

The overview below summarizes the most important changes in the documentation when compared to the previous edition.

Edition	Note	
09/2018	Section Getting started (Page 7) added.	
	Basic safety instructions in the sections Use in hazardous areas (Page 21), Installing/mounting (Page 23), Connecting (Page 37) updated.	
	Section Connecting the device (Page 42) updated.	
	Section Vibration resistance (Page 95) updated.	
06/2018	First edition	

2.3 Scope of validity of this document

Variant	SITRANS P320 mA/HART	SITRANS P420 mA/HART
Gauge pressure	7MF0300	7MF0400
Gauge pressure from the differential pressure series	7MF0310	7MF0410
Absolute pressure from the gauge pressure series	7MF0320	7MF0420
Absolute pressure from the differential pressure series	7MF0330	7MF0430
Differential pressure and flow rate, PN 160 (MAWP 2320 psi)	7MF0340	7MF0440
Differential pressure and flow rate, PN 420 (MAWP 6092 psi)	7MF0350	7MF0450
Level	7MF0360	7MF0460

2.4 Intended use

Overview

Depending on the variant, the pressure transmitter measures corrosive, non-corrosive and hazardous gases, vapors and liquids.

You can use the pressure transmitter for the following measuring tasks:

- Gauge pressure
- Absolute pressure
- Differential pressure

With the appropriate configuration and the necessary add-on parts (e.g. limiters and remote seals), you can also use the pressure transmitter for the following measuring tasks:

- Level
- Volume flow
- Mass flow
- Volume
- Customized characteristic curve

The output signal for all measuring tasks is a direct current of 4 to 20 mA.

You can install the "intrinsically-safe" or "flameproof enclosure" version of the pressure transmitter in hazardous areas. The devices have a test certification and comply with the corresponding directives.

Pressure transmitters with remote seals of various shapes can be provided for special applications. For example, measuring high-viscosity substances is a special application.

Operate the device in accordance with the specifications in section Technical data (Page 63).

2.5 Product compatibility

The following table describes the compatibility between the edition of this manual, the device revision, the engineering system and the associated EDD.

Edition	Comments	Product compatibility	Compatibility with device integration package
09/2018	Manual re- vised	HART 7 FW: 1.00.08 or higher HW: 1.00.00 or higher	SIMATIC PDM V9.0 or higher AMS Device Manager V13 or higher or DTM Pactware V4.1 SP4 FC475 V3.9 or higher
06/2018	First edition	HART 7 FW: 1.00.08 or higher HW: 1.00.00 or higher	SIMATIC PDM V9.0 or higher AMS Device Manager V13 or higher er DTM Pactware V4.1 SP4 FC475 V3.9 or higher

2.6 Nameplate layout

Nameplate with general information

The nameplate with the article number and other important information, such as design details and technical data, is located on the cover over the buttons.

- ① Firmware and hardware identification
- ② Article number (MLFB number)
- 3 Order supplement (order code)
- 4 Note operating instructions, certificates and approvals
- Serial number
- 6 Materials, connection, diaphragm, O-ring, oil
- Figure 2-1 Example

- Minimum/maximum measuring span
- Maximum allowable operating pressure / maximum allowable test pressure
- Conformity with country-specific directives
- Permitted ambient temperature for the hazardous area of the corresponding temperature class
- 1 Protection class
- ② QR code to the mobile website with devicespecific information

Nameplate with approval information

The nameplate with approval information is located on the front of the enclosure.

- 1a Characteristics of the hazardous area
- 1b Type of protection
- 1c Group (gas, dust)
- 1d Maximum surface temperature (temperature class)
- 1e Device protection level

Figure 2-2 Example

Measuring point label

The measuring point label is fastened with a wire under the front cover.

Figure 2-3 Example

Nameplate with information on the remote seals

The nameplate with information on the remote seals is located on the back of the enclosure.

- 2 Article number (MLFB number)
- 3 Order supplement (order code)

Example

- 4 Serial number
- Operating temperature
- Vacuum service: No, oxygen ≤ 60 °C; ≤ 50 bar

- Nominal diameter/nominal pressure: 4 inch, 50 mm tube length, CLASS 600
- Filling liquid: Food grade oil (FDA-compliant)
- Wetted materials: Diaphragm duplex, 1,4462
- QR code for mobile website with device-specific information
- Assembly and manufacturing location

2.7 Checking the consignment

Figure 2-4

- 1. Check the packaging and the delivered items for visible damages.
- 2. Report any claims for damages immediately to the shipping company.
- 3. Retain damaged parts for clarification.
- 4. Check the scope of delivery by comparing your order to the shipping documents for correctness and completeness.

WARNING

Using a damaged or incomplete device

Risk of explosion in hazardous areas.

Do not use damaged or incomplete devices.

Security information 2.8

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines, and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement - and continuously maintain - a holistic, state-of-the-art industrial security concept. Siemens' products and solutions only form one element of such a concept.

2.10 Notes on warranty

Customer is responsible to prevent unauthorized access to its plants, systems, machines and networks. Systems, machines and components should only be connected to the enterprise network or the internet if and to the extent necessary and with appropriate security measures (e.g. use of firewalls and network segmentation) in place.

Additionally, Siemens' guidance on appropriate security measures should be taken into account. You can find more information about industrial security by visiting: https://www.siemens.com/industrialsecurity.

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends you apply product updates as soon as available and always use the latest product versions. Use of product versions that are no longer supported, and failure to apply latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under

https://www.siemens.com/industrialsecurity.

2.9 Transportation and storage

To guarantee sufficient protection during transport and storage, observe the following:

- Keep the original packaging for subsequent transportation.
- Devices/replacement parts should be returned in their original packaging.
- If the original packaging is no longer available, ensure that all shipments are properly
 packaged to provide sufficient protection during transport. Siemens cannot assume liability
 for any costs associated with transportation damages.

NOTICE

Insufficient protection during storage

The packaging only provides limited protection against moisture and infiltration.

Provide additional packaging as necessary.

Special conditions for storage and transportation of the device are listed in Technical data (Page 63).

2.10 Notes on warranty

The contents of this manual shall not become part of or modify any prior or existing agreement, commitment or legal relationship. The sales contract contains all obligations on the part of Siemens as well as the complete and solely applicable warranty conditions. Any statements regarding device versions described in the manual do not create new warranties or modify the existing warranty.

The content reflects the technical status at the time of publishing. Siemens reserves the right to make technical changes in the course of further development.

Safety instructions

3.1 Precondition for use

This device left the factory in good working condition. In order to maintain this status and to ensure safe operation of the device, observe these instructions and all the specifications relevant to safety.

Observe the information and symbols on the device. Do not remove any information or symbols from the device. Always keep the information and symbols in a completely legible state.

3.1.1 Warning symbols on the device

Symbol	Explanation
\triangle	Consult operating instructions

3.1.2 Laws and directives

Observe the safety rules, provisions and laws applicable in your country during connection, assembly and operation. These include, for example:

- National Electrical Code (NEC NFPA 70) (USA)
- Canadian Electrical Code (CEC) (Canada)

Further provisions for hazardous area applications are for example:

- IEC 60079-14 (international)
- EN 60079-14 (EU)

3.1.3 Conformity with European directives

The CE mark on the device is a sign of conformity with the following European directives:

Electromagnetic compatibility EMC Directive of the European Parliament and of the Council on the harmonization

2014/30/EU

of the laws of the Member States relating to electromagnetic compatibility

Atmosphère explosible ATEX 2014/34/EU

Directive of the European Parliament and the Council on the harmonization of

the laws of the Member States concerning equipment and protective systems

intended for use in potentially explosive atmospheres

Pressure Equipment Directive

PED

2014/68/EU

Directive of the European Parliament and of the Council on the harmonization of the laws of the Member States relating to the making available on the market

of pressure equipment

The directives applied can be found in the EU declaration of conformity for the associated device.

WARNING

Improper device modifications

Risk to personnel, system and environment can result from modifications to the device, particularly in hazardous areas.

Only carry out modifications that are described in the instructions for the device. Failure
to observe this requirement cancels the manufacturer's warranty and the product
approvals.

3.2 Requirements for special applications

Due to the large number of possible applications, each detail of the described device versions for each possible scenario during commissioning, operation, maintenance or operation in systems cannot be considered in the instructions. If you need additional information not covered by these instructions, contact your local Siemens office or company representative.

Note

Operation under special ambient conditions

We highly recommend that you contact your Siemens representative or our application department before you operate the device under special ambient conditions as can be encountered in nuclear power plants or when the device is used for research and development purposes.

DANGER

Using equipment with approval-related restrictions

Risk of explosion, damage to property due to operating conditions not in conformity with the approval (e.g. temperature and pressure limits exceeded)

Take note of the approval restrictions before using the device. You can find the information on this in the current certificates.

3.3 Use in hazardous areas

Qualified personnel for hazardous area applications

Persons who install, connect, commission, operate, and service the device in a hazardous area must have the following specific qualifications:

- They are authorized, trained or instructed in operating and maintaining devices and systems according to the safety regulations for electrical circuits, high pressures, aggressive, and hazardous media.
- They are authorized, trained, or instructed in carrying out work on electrical circuits for hazardous systems.
- They are trained or instructed in maintenance and use of appropriate safety equipment according to the pertinent safety regulations.

WARNING

Use in hazardous area

Risk of explosion.

- Only use equipment that is approved for use in the intended hazardous area and labelled accordingly.
- Don't use devices that have been operated outside the conditions secified for hazardous areas. If you have used the device outside the conditions for hazardous areas permanently make all Ex markings unrecognizable on the nameplate.

See also

Technical data (Page 63)

3.3 Use in hazardous areas

MARNING

Loss of safety of device with type of protection "Intrinsic safety Ex i"

If the device has already been operated in non-intrinsically safe circuits or the electrical specifications have not been observed, the safety of the device is no longer ensured for use in hazardous areas. There is a risk of explosion.

- Connect the device with type of protection "Intrinsic safety" solely to an intrinsically safe circuit.
- Observe the specifications for the electrical data on the certificate and/or in Technical data (Page 63).

WARNING

Use of incorrect device parts in potentially explosive environments

Devices and their associated device parts are either approved for different types of protection or they do not have explosion protection. There is a risk of explosion if device parts (such as covers) are used for devices with explosion protection that are not expressly suited for this type of protection. If you do not adhere to these guidelines, the test certificates and the manufacturer warranty will become null and void.

- Use only device parts that have been approved for the respective type of protection in the potentially explosive environment. Covers that are not suited for the "explosion-proof" type of protection are identified as such by a notice label attached to the inside of the cover with "Not Ex d Not SIL".
- Do not swap device parts unless the manufacturer specifically ensures compatibility of these parts.

MARNING

Use of the device with intrinsic safety "Ex i" type of protection in a polluted environment.

If you open the device on the display side, there is a risk of pollution. The safety of the device for use in hazardous areas is therefore no longer guaranteed. There is a danger of explosion.

Ensure that the environment is clean before rotating or replacing the display.

WARNING

Incorrect material for the diaphragm in Zone 0

Risk of explosion in the hazardous area. If operated with intrinsically safe supply devices of category "ib" or devices of the flameproof enclosure version "Ex d" and simultaneous use in Zone 0, pressure transmitter explosion protection depends on the tightness of the diaphragm.

Ensure that the material used for the diaphragm is suitable for the process medium. Refer to the information in the section "Technical data (Page 63)".

Installing/mounting

4.1 **Basic safety instructions**

Pressure applications

Danger to personnel, system and environment will result from improper disassembly.

 Never attempt to loosen, remove, or disassemble process connection while vessel contents are under pressure.

WARNING

Wetted parts unsuitable for the process media

Risk of injury or damage to device.

Hot, toxic and corrosive media could be released if the process medium is unsuitable for the wetted parts.

Ensure that the material of the device parts wetted by the process medium is suitable for the medium. Refer to the information in Technical data (Page 63).

WARNING

Unsuitable connecting parts

Risk of injury or poisoning.

In case of improper mounting, hot, toxic, and corrosive process media could be released at the connections.

Ensure that connecting parts (such as flange gaskets and bolts) are suitable for connection and process media.

WARNING

Exceeded maximum permissible operating pressure

Risk of injury or poisoning.

The maximum permissible operating pressure depends on the device version, pressure limit and temperature rating. The device can be damaged if the operating pressure is exceeded. Hot, toxic and corrosive process media could be released.

Ensure that maximum permissible operating pressure of the device is not exceeded. Refer to the information on the nameplate and/or in Technical data (Page 63).

4.1 Basic safety instructions

MARNING

Incorrect material for the diaphragm in Zone 0

Risk of explosion in the hazardous area. If operated with intrinsically safe supply devices of category "ib" or devices of the flameproof enclosure version "Ex d" and simultaneous use in Zone 0, pressure transmitter explosion protection depends on the tightness of the diaphragm.

Ensure that the material used for the diaphragm is suitable for the process medium. Refer to the information in the section "Technical data (Page 63)".

♠ WARNING

Loss of safety for devices with "flameproof enclosure" type of protection

Risk of explosion in hazardous areas. An explosion may be caused by hot gas escaping from the flameproof enclosure if there is too little space between it and fixed parts (e.g. walls, pipes).

Ensure that there is a minimum clearance of at least 40 mm between the flameproof joints and the fixed parts.

(1)Flameproof joint

WARNING

Vibrations in the plant

Risk of injury or damage to device.

Vibration leads to material fatigue, for example, cracks and weld seams breaks.

Hot, toxic and corrosive process media can emerge.

Make sure that you have mounted the pressure transmitter (including accessories) protected against vibration.

Refer to the information on vibration resistance in the section Technical specifications (Page 63).

CAUTION

Hot surfaces resulting from hot process media

Risk of burns resulting from surface temperatures above 65 °C (149 °F).

- Take appropriate protective measures, for example contact protection.
- Make sure that protective measures do not cause the maximum permissible ambient temperature to be exceeded. Refer to the information in Technical data (Page 63).

CAUTION

External stresses and loads

Damage to device by severe external stresses and loads (e.g. thermal expansion or pipe tension). Process media can be released.

Prevent severe external stresses and loads from acting on the device.

Note

Material compatibility

Siemens can provide you with support concerning selection of sensor components wetted by process media. However, you are responsible for the selection of components. Siemens accepts no liability for faults or failures resulting from incompatible materials.

WARNING

Use in wrong environment

Risk of explosion in hazardous areas.

Use the device only in an area with at least a pollution degree 2 according to IEC 60664-1.

WARNING

Using safety extra-low voltage for devices of the protection type "db", "ec", "time" or "time" Risk of explosion in hazardous areas.

Isolate the non-intrinsically safe circuit safely from ground, e.g.: through a SELV circuit.

4.1 Basic safety instructions

4.1.1 Installation location requirements

MARNING

Insufficient air supply

The device may overheat if there is an insufficient supply of air.

- Install the device so that there is sufficient air supply in the room.
- Observe the maximum permissible ambient temperature. Refer to the information in the section Technical data (Page 63).

CAUTION

Aggressive atmospheres

Damage to device through penetration of aggressive vapors.

• Ensure that the device is suitable for the application.

NOTICE

Direct sunlight

Increased measuring errors.

• Protect the device from direct sunlight.

Make sure that the maximum ambient temperature is not exceeded. Refer to the information in the section Technical data (Page 63).

4.1.1.1 Devices with marine approval

Note

For vibrations in the direction of the measuring cell diaphragm, the measuring accuracy of the pressure transmitter with flush-mounted diaphragm can deviate no more than 0.2% from the respective specification.

- Install the device so that no or almost no vibrations occur in the direction of the diaphragms.
- To avoid measuring values that fluctuate strongly, use the damping function.

For information on vibration resistance, refer to the marine approval certificate.

4.1.2 Proper mounting

WARNING

Incorrect mounting at Zone 0

Risk of explosion in hazardous areas.

- Ensure sufficient tightness at the process connection.
- Observe the standard IEC/EN 60079-14.

CAUTION

Loss of type of protection

Damage to device if the enclosure is open or not properly closed. The type of protection specified on the nameplate or in Technical data (Page 63) is no longer guaranteed.

Make sure that the device is securely closed.

NOTICE

Incorrect mounting

The device can be damaged, destroyed, or its functionality impaired through improper mounting.

- Before installing ensure there is no visible damage to the device.
- Make sure that process connectors are clean, and suitable gaskets and glands are used.
- Mount the device using suitable tools. Refer to the information in Technical data (Page 63).

NOTICE

Use of line and cable entries made of plastic in hazardous areas

Device damage caused by impact at temperatures below -20 °C.

• Make sure that the line and cable entries are protected from impacts.

4.2 Installation (except level)

4.2.1 Installation configuration

The pressure transmitter can be configured above or below the pressure sampling point. The recommended configuration depends on the aggregate state of the process medium.

4.2 Installation (except level)

Installation configuration for gases

Install the pressure transmitter above the pressure sampling point.

Lay the pressure tubing with a constant gradient to the pressure sampling point, so that any condensation produced can drain in the main line and thereby avoid corruption of the measured values.

Installation configuration for vapor and liquid

Install the pressure transmitter below the pressure sampling point.

Lay the pressure tubing with a constant gradient to the pressure sampling point so that any gas pockets can escape in the main line.

4.2.2 Installation (except level)

Mounting location

Verify that the mounting location meets the following conditions:

- Accessible
- Close to the measuring point
- Vibration-free
- Within the permitted ambient temperature values

Protect the pressure transmitter from:

- Direct heat radiation
- Rapid temperature fluctuations
- Heavy contamination
- Mechanical damage
- Direct sunlight

Requirement

- You have compared the desired operating data with the data on the nameplate.
- You have adhered to the information on the remote seal during its installation.

Procedure

- Attach the pressure transmitter to the process connection.
 Use an appropriate tool (e.g. open-ended wrench with width across flats 36). Otherwise, the measuring cell may be damaged.
- Turn only on the key area above the process connection.
 Caution: If you turn the pressure transmitter on the housing, the measuring cell may be damaged.
- 3. To guarantee secure and vibration-free installation of the pressure transmitter, fasten it to a mounting bracket (Page 29).

4.2.3 Fastening with the mounting bracket

Introduction

You mount the pressure transmitter with the mounting bracket as described below:

- On a mounting range
- On a vertical or horizontal pipe (Ø 50 to 60 mm)

When securing, observe the torques in the section Torques (Page 101).

Note

Install the device so that the pressure transmitter and the differential pressure lines are not subject to different vibrations. Otherwise there is a danger that the differential pressure lines will rupture.

Example 1: Pipe mounting of pressure transmitter (gauge pressure series)

The mounting bracket for the gauge pressure series includes, among other things:

- 2 screws
- One pipe clamp with nuts
- Washers

Mount the pressure transmitter as follows:

4.3 Installation (level)

Example 2: Pipe mounting of pressure transmitter (differential pressure series)

The mounting bracket for the differential pressure series includes, among other things:

- 4 screws
- One pipe clamp with nuts
- Washers

You can then mount the pressure transmitter in different positions:

4.3 Installation (level)

Mounting location

Verify that the mounting location meets the following conditions:

- Accessible
- Close to the measuring point
- Vibration-free
- Within the permitted ambient temperature values

Protect the pressure transmitter from:

- Direct heat radiation
- Rapid temperature fluctuations
- Heavy contamination
- Mechanical damage
- Direct sunlight

Note

Select the height of the mounting flange such that the pressure transmitter is always mounted below the lowest fill height to be measured.

Requirement

- You have compared the desired operating data with the data on the nameplate.
- You have adhered to the information on the remote seal during its installation.

Procedure

To install the pressure transmitter for level, proceed as follows:

- Attach the seal to the container's mating flange.
 Ensure that the seal is centrally positioned and that it does not restrict the movement of the flange's seal diaphragm in any way. Otherwise, the seal of the process connection is not guaranteed to be tight.
- 2. Screw on the pressure transmitter's flange.
- 3. Observe the installation position.

4.3.1 Mounting on the container

Mounting on open container

A line is not required when taking measurements in an open container since the negative side is connected with the atmosphere.

Ensure that no dirt enters the open connection ports.

• Use, for example, threaded plug with vent valve 7MF4997-1CP.

4.3 Installation (level)

Formula:

 $\begin{aligned} & \text{Lower range value: } p_{\text{MA}} = \rho \cdot g \cdot h_{\text{U}} \\ & \text{Upper range value: } p_{\text{ME}} = \rho \cdot g \cdot h_{\text{O}} \end{aligned}$

Measurement assembly on an open container

h_U	Lower filling level	Δp_{MA}	Lower range value
h_{O}	Upper filling level	Δp_{ME}	Upper range value
р	Pressure	ρ	Density of the measured medium in the container
		g	Acceleration due to gravity

Mounting on closed container

When taking measurements in a closed container without or with little condensate formation, the negative pressure line is not filled.

Lay the line in such a way that condensation pockets do not form. If required, you need to install a condensation container below the negative pressure line of the pressure transmitter.

Formula:

Lower range value: $\Delta p_{MA} = \rho \cdot g \cdot h_{U}$ Upper range value: $\Delta p_{ME} = \rho \cdot g \cdot h_{O}$

Measurement assembly on a closed container (no or little condensate separation)

n_{\scriptscriptstyleU}	Lower filling level	Δp_{MA}	Lower range value
h_{O}	Upper filling level	Δp_{ME}	Upper range value
р	Pressure	ρ	Density of the measured medium in the container
		g	Acceleration due to gravity

When taking measurements in a closed container with strong condensate formation, you must fill the negative pressure line (mostly with the condensate of the measured medium) and install a condensate pot. Lock the device using the dual pneumatic block 7MF9017-..A.

4.3 Installation (level)

Formula: Lower range value: $\Delta p_{MA} = g \cdot (h_U \cdot \rho - h_V \cdot \rho')$ Upper range value: $\Delta p_{MA} = g \cdot (h_O \cdot \rho - h_V \cdot \rho')$

Measurement assembly on a closed container (strong condensate formation)

$h_{\rm U}$	Lower filling level	Δp_{MA}	Lower range value
h_{O}	Upper filling level	Δp_{ME}	Upper range value
h_V	Gland distance	ρ	Density of the measured medium in the container
p	Pressure	ρ'	Density of fluid in the negative pressure line corresponds to the prevailing temperature there
		g	Acceleration due to gravity

The process connection on the negative side is a female thread $\frac{1}{4}$ -18 NPT or an oval flange. Lay the line for the negative pressure using a seamless steel tube 12 mm x 1.5 mm.

Removing 4.4

⚠ WARNING

Incorrect disassembly

The following risks may result from incorrect disassembly:

- Injury through electric shock
- Risk through emerging media when connected to the process
- Risk of explosion in hazardous area

In order to disassemble correctly, observe the following:

- Before starting work, make sure that you have switched off all physical variables such as pressure, temperature, electricity etc. or that they have a harmless value.
- If the device contains hazardous media, it must be emptied prior to disassembly. Make sure that no environmentally hazardous media are released.
- Secure the remaining connections so that no damage can result if the process is started unintentionally.

4.4 Removing

Connecting

5.1 **Basic safety instructions**

WARNING

Unsuitable cables, cable glands and/or plugs

Risk of explosion in hazardous areas.

- Use only cable glands/plugs that comply with the requirements for the relevant type of protection.
- Tighten the cable glands in accordance with the torques specified in Technical data (Page 63).
- Close unused cable inlets for the electrical connections.
- When replacing cable, glands use only cable glands of the same type.
- After installation, check that the cables are seated firmly.

WARNING

Incorrect conduit system

Risk of explosion in hazardous areas as result of open cable inlet or incorrect conduit system.

 In the case of a conduit system, mount a spark barrier at a defined distance from the device input. Observe national regulations and the requirements stated in the relevant approvals.

▲ WARNING

Unprotected cable ends

Risk of explosion through unprotected cable ends in hazardous areas.

Protect unused cable ends in accordance with IEC/EN 60079-14.

5.1 Basic safety instructions

MARNING

Lack of equipotential bonding

Danger of explosion through compensating currents or ignition currents through lack of equipotential bonding.

For devices of intrinsic safety "db", "ec", "tb" or "tc" which are operated in a non-intrinsically safe circuit, observe the following:

Connect the device to the system via the equipotential bonding terminal.

Note: For devices of the intrinsic safety "ia", "ib" and "ic" type of protection, which are operated in an intrinsically safe circuit, connection to the system via the equipotential bonding terminal is not required.

WARNING

Improper laying of shielded cables

Risk of explosion through compensating currents between hazardous area and the non-hazardous area.

- Shielded cables that cross into hazardous areas should be grounded only at one end.
- If grounding is required at both ends, use an equipotential bonding conductor.

WARNING

Connecting device in energized state

Risk of explosion in hazardous areas.

• Connect devices in hazardous areas only in a de-energized state.

Exceptions:

- Devices having the type of protection "Intrinsic safety Ex i" may also be connected in energized state in hazardous areas.
- Exceptions for type of protection "Increased safety ec" (Zone 2) are regulated in the relevant certificate.

▲ WARNING

Incorrect selection of type of protection

Risk of explosion in hazardous areas.

This device is approved for various types of protection.

- 1. Select an intrinsic safety type of protection "ia", "ib", "ic" or non-intrinsic safety "db", "tb", "tc", "ec".
- 2. Connect the device according to the selected type of protection.
- 3. When operating with non-intrinsically safe power supplies, make the intrinsically safe types of protection permanently unrecognizable as in the example.

II 1/2G Ex ia IIC T4/T6 Ga/Gb II 1/2G Ex ia/db IIC T4/T6 Ga/Gb-

Figure 5-1 Example: Type 7MF0..0-....-.D..-Z + E20

NOTICE

Ambient temperature too high

Damage to cable sheath.

 At an ambient temperature ≥ 60 °C (140 °F), use heat-resistant cables suitable for an ambient temperature at least 20 °C (36 °F) higher.

NOTICE

Condensation in the device

Damage to device through formation of condensation if the temperature difference between transportation or storage and the mounting location exceeds 20 °C (36 °F).

Before taking the device into operation let the device adapt for several hours in the new environment.

NOTICE

Incorrect measured values with incorrect grounding

The device must not be grounded using the "+" connection. It may otherwise malfunction and be permanently damaged.

If necessary, ground the device using the "-" connection.

5.1 Basic safety instructions

Note

Electromagnetic compatibility (EMC)

You can use this device in industrial environments, households and small businesses.

For metal housings there is an increased electromagnetic compatibility compared to high-frequency radiation. This protection can be increased by grounding the housing, see Technical data (Page 63).

Note

Improvement of interference immunity

- Lay signal cables separate from cables with voltages > 60 V.
- Use cables with twisted wires.
- Keep device and cables at a distance from strong electromagnetic fields.
- Take account of the conditions for communication specified in the Technical data (Page 63).
- Use shielded cables to guarantee the full specification according to HART/PA/FF.

5.2 Connecting the device

5.2.1 Opening the device

Procedure

- Safety catch (optional)
- ② Cover of the electrical cable compartment.

Figure 5-2 Rear view of pressure transmitter

- 1. Use a 3 mm Allen key to loosen the safety catch ①.
- 2. Unscrew the cover of the electrical cable compartment ②.

5.2.2 Connecting the device

Procedure

- 1 Feed separator with integrated load
- 2 Supply voltage
- 3 Cable gland
- 4 Connecting terminals
- 5 Test connector for DC measuring device

- 6 Safety catch
- (7) Process connection
- 8 Protective conductor connector/ equipotential bonding terminal
- Ground terminal
- Figure 5-3 Example: Electrical connection with feed separator
- 1. Connect the device to the system via the existing protective ground connection ⁽⁸⁾ by observing the torques.
 - Use a cable with a diameter of 1 ... 4 mm².
- 2. Insert the connecting cable through the cable gland ③.

- 3. Connect the wires to the connection terminals ④ "+" and "-", observing the polarity and the torques.
 - Use wires with a diameter of 0.5 ... 2.5 mm².
 - If you use stranded wire used, you need a ferrule.
- 4. Apply the shield to the screw of the ground terminal ⑨.

 The screw of the ground terminal is electrically connected to the external protective conductor connection.

NOTICE

Incorrect measured values with incorrect grounding

The device must not be grounded using the "+" connection. It may otherwise malfunction and be permanently damaged.

• If necessary, ground the device using the "-" connection.

Torques (Page 101)

5.2.3 Closing the device

Procedure

- Cover over buttons
- 2 Cable gland
- Safety catch (back)
- 4 Cover (rear) for electrical terminal compartment

7 100 5 6

- ⑤ Blanking plug
- Safety catch (front)
- Over (front), optionally with inspection window

Figure 5-4 View of the pressure transmitter: Left: Back right: Front view

5.2 Connecting the device

- 1. Screw on the cover ④ and ⑦ as far as it will go.

 Make sure that there is no gap between enclosure and cover.
- 2. Secure each cover with the cover catch ③ and ⑥ by removing the screw.
- 3. Close the cover over the buttons ①.
- 4. Tighten the screw for the cover over the buttons.
- 5. Check the tightness of the blanking plug ⑤ and cable gland ② in accordance with the degree of protection.

Commissioning

6.1 **Basic safety instructions**

Toxic gases and liquids

Danger of poisoning when venting the device: if toxic process media are measured, toxic gases and liquids can be released.

Before venting ensure that there are no toxic gases or liquids in the device, or take the appropriate safety measures.

WARNING

Improper commissioning in hazardous areas

Device failure or risk of explosion in hazardous areas.

- Do not commission the device until it has been mounted completely and connected in accordance with the information in Technical data (Page 63).
- Before commissioning take the effect on other devices in the system into account.

▲ WARNING

Commissioning and operation with pending error

If an error message appears, correct operation in the process is no longer guaranteed.

- Check the gravity of the error.
- Correct the error.
- If the error still exists:
 - Take the device out of operation.
 - Prevent renewed commissioning.

▲ WARNING

Loss of explosion protection

Risk of explosion in hazardous areas if the device is open or not properly closed.

Close the device as described in Connecting (Page 35).

6.2 Switching on the supply voltage

MARNING

Opening device in energized state

Risk of explosion in hazardous areas

- Only open the device in a de-energized state.
- Check prior to commissioning that the cover, cover locks, and cable inlets are assembled in accordance with the directives.

Exception: Devices having the type of protection "Intrinsic safety Ex i" may also be opened in energized state in hazardous areas.

WARNING

Hazardous contact voltage

Risk of injury through hazardous contact voltage when the device is open or not completely closed.

The degree of protection specified on the nameplate or in Technical data (Page 63) is no longer guaranteed if the device is open or not properly closed.

Make sure that the device is securely closed.

Note

Hot surfaces

Hot process medium and high ambient temperatures lead to hot surfaces which can cause burns.

• Take corresponding protective measures, for example wear protective gloves.

6.2 Switching on the supply voltage

Requirement

- You have connected the device correctly.
- The terminal voltage on the device is correct. (Page 101)

6.4 gauge pressure, absolute pressure from the differential pressure series and absolute pressure from the gauge pressure series

Procedure

Switch on the power supply.

- Product name and firmware version appear briefly on the display.
- The measured values are shown on the display.
 For a device without a display, you read off the current output as follows:
 - Over the remote control (e.g. SIMATIC PDM).
 - With a DC current measuring device.
 Connecting the device (Page 40)

Result

The device is now ready for operation.

6.3 Commissioning the device

Ensure that the operating data matches the values specified on the nameplate.

The parameters for damping, characteristic curve, start of scale value/full scale value and fault current must agree with the settings of the measuring point.

You can find more detailed information on operation and configuration in the operating instructions.

The following commissioning cases are typical examples. Configurations different from those listed here may be useful depending on the system configuration.

gauge pressure, absolute pressure from the differential pressure series and absolute pressure from the gauge pressure series

6.4.1 Commissioning for gases

Requirement

All valves are closed.

6.4 gauge pressure, absolute pressure from the differential pressure series and absolute pressure from the gauge pressure series

Procedure

Example: Measuring gases above the pressure tapping point

Example: Measuring gases below the pressure tapping point

- Pressure transmitter
- ② Shut-off valve
- 3 Shut-off valve to process
- 4 Shut-off valve for test connection or for bleed screw
- ⑤ Pressure line
- 6 Shut-off valve
- Shut-off valve (optional)
- 8 Condensate vessel (optional)
- Blowout valve

To commission the pressure transmitter for gases, proceed as follows:

- 1. Open the shut-off valve for the test connection 4.
- 2. Via the test connection of the shut-off valve ②, apply the pressure corresponding to the start of scale value to the pressure transmitter.
- 3. Ensure that the lower range value corresponds to the desired value. Otherwise, correct the value.
- 4. Close the shut-off valve for the test connection 4.

6.4 gauge pressure, absolute pressure from the differential pressure series and absolute pressure from the gauge pressure series

- 5. Open the shut-off valve 6 at the pressure tapping point.
- 6. Open the shut-off valve for the process 3.

6.4.2 Commissioning with steam or liquid

Requirement

All valves are closed.

Procedure

- Pressure transmitter
- Shut-off valve
- 3 Shut-off valve to process
- Shut-off valve for test connection or for bleed screw
- Pressure line
- 6 Shut-off valve
- ⑦ Drain valve
- 8 Compensation vessel (steam only)

To commission the pressure transmitter for steam or liquid, proceed as follows:

- 1. Open the shut-off valve for the test connection 4.
- 2. Via the test connection of the shut-off valve ②, apply the pressure corresponding to the start of scale value to the pressure transmitter.
- 3. Ensure that the lower range value corresponds to the desired value. Otherwise, correct the value.
- 4. Close the shut-off valve for the test connection 4.

6.5 Differential pressure and flow rate

- 5. Open the shut-off valve 6 at the pressure tapping point.
- 6. Open the shut-off valve for the process 3.

6.5 Differential pressure and flow rate

♠ WARNING

Incorrect or improper operation

If the lock screws are missing or are not sufficiently tight, and/or if the valves are operated incorrectly or improperly, it could lead to serious physical injuries or considerable damage to property.

Measure

- Make sure that the lock screws and/or the vent valve are screwed in and fully tightened.
- Operate the valves properly.

6.5.1 Commissioning in gaseous environments

Requirement

All shut-off valves are closed.

Procedure

Pressure transmitter above the differential pressure transducer

Pressure transmitter below the differential pressure transducer

1	Pressure transmitter	7	Blowout valves
2	Stabilizing valve	8	Condensate vessels (optional)
3,4	Differential pressure valves	9	Differential pressure transducer
5	Differential pressure lines	100	3-way valve manifold
6	Shut-off valves		

To commission the pressure transmitter for gases, proceed as follows:

- 1. Open both the shut-off valves ⑥ at the pressure tapping point.
- 2. Open the stabilizing valve ②.
- 3. Open the differential pressure valve (③ or ④).
- 4. Check and, if necessary, correct the zero point when the start-of-scale value is 0 bar (4 mA).
- 5. Close the stabilizing valve ②.
- 6. Open the other differential pressure valve (③ or ④).

6.5.2 Commissioning for liquids

Requirement

All valves are closed.

Toxic liquids

Danger of poisoning when the device is vented.

If toxic process media are measured with this device, toxic liquids can escape when the device is vented.

• Before venting, make sure there is no liquid in the device or take the necessary safety precautions.

Procedure

Pressure transmitter below the differential pressure transducer

- Pressure transmitter
- ② Stabilizing valve
- ③, ④ Differential pressure valves
- ⑤ Differential pressure lines
- 6 Shut-off valves

Pressure transmitter above the differential pressure transducer

- 7 Drain valves
- 8 Gas collector vessels (optional)
- Differential pressure transducer
- Went valves
- 10 5-way valve manifold

To commission the pressure transmitter for liquids, proceed as follows:

- 1. Open both the shut-off valves 6 at the pressure tapping point.
- 2. Open the stabilizing valve ②.
- 3. With pressure transmitters below the differential pressure transducer, partially open both drain valves ⑦ one after the other until liquid emerges without bubbles. In the case of a pressure transmitter above the differential pressure transducer, partially open both vent valves ⑩ one after the other until liquid emerges without bubbles.
- 4. Close both drain valves 7 or vent valves 10.
- 5. Partially open the differential pressure valve ③ and the vent valve (sealing plug with vent valve) on the positive side of the pressure transmitter until liquid escapes without bubbles.
- 6. Close the vent valve (sealing plug with vent valve).
- 7. Partially open the vent valve (sealing plug with vent valve) on the negative side of the pressure transmitter until liquid escapes without bubbles.
- 8. Close the differential pressure valve ③.
- 9. Partially open the differential pressure valve ④ until liquid escapes without bubbles.
- 10. Close the differential pressure valve.
- 11. Close the vent valve (sealing plug with vent valve) on the negative side of the pressure transmitter.
- 12. Open the differential pressure valve ③ with half a revolution.
- 13. For a lower range value of 0 bar, check the zero point (4 mA) and correct the lower range value if it is different.
- 14. Close the stabilizing valve ②.
- 15. Open the differential pressure valves (3 and 4) completely.

6.5.3 Commissioning with vapor

Requirement

All valves are closed.

WARNING

Hot vapor

Danger of injury or damage to device.

If the shut-off valves 6 and the differential pressure valve 3 are both open and the stabilizing valve 2 is then opened, the pressure transmitter 1 can be damaged by the flow of vapor.

• Follow the specified procedure for commissioning.

6.5 Differential pressure and flow rate

Hot vapor

Danger of injury.

You can briefly open the drain valves ⑦ to clean the line. Hot vapor can escape in the process.

Only open the drain valves briefly, and close them again before vapor escapes.

Procedure

- Pressure transmitter
- Stabilizing valve
- 3, Differential pressure valves
- (4)
- 5 Differential pressure lines
- 6 Shut-off valves

- ⑦ Drain valves
- 8 Condensate pots
- 9 Differential pressure transducer/Orifice plate
- 1 Insulation
- ① 3-way valve manifold

To commission the pressure transmitter for vapor, proceed as follows:

- 1. Open both the shut-off valves 6 at the pressure tapping point.
- 2. Open the stabilizing valve ②.
- 3. Wait until the steam in the differential pressure lines ⑤ and in the equalizing vessels ⑧ has condensed.
- 4. Partially open the differential pressure valve ③ and the vent valve (sealing plug with vent valve) on the positive side of the pressure transmitter until condensate escapes without bubbles.
- 5. Close the vent valve (sealing plug with vent valve).

- 6. Partially open the vent valve (sealing plug with vent valve) on the negative side of the pressure transmitter until condensate escapes without bubbles.
- 7. Close the differential pressure valve ③.
- 8. Partially open the differential pressure valve ④ until condensate escapes without bubbles.
- 9. Close the vent valve with blanking plug on the negative side ①.
- 10. Close the differential pressure valve.
- 11. Open the differential pressure valve ③ by half a revolution.
- 12. For the start of scale value 0 bar, check the zero point (4 mA).

 If the differential pressure lines ⑤ have equally high condensate columns with the same temperature, the measurement result is error-free. Otherwise, repeat the zero-point adjustment.
- 13. Close the stabilizing valve 2.
- 14. Fully open the differential pressure valves 3 and 4.

Cleaning process cable

- 1. To clean the line, briefly open the drain valves ⑦.
- 2. Close the drain valve ⑦ before vapor escapes.

6.5 Differential pressure and flow rate

Service and maintenance

7.1 Basic safety instructions

The device is maintenance-free. However, a periodic inspection according to pertinent directives and regulations must be carried out.

An inspection can include check of:

- Ambient conditions
- Seal integrity of the process connections, cable entries, and cover screws
- Reliability of power supply, lightning protection, and grounds

WARNING

Use of a computer in a hazardous area

If the interface to the computer is used in the hazardous area, there is a risk of explosion.

Ensure that the atmosphere is explosion-free (hot work permit).

WARNING

Dust layers above 5 mm

Risk of explosion in hazardous areas. Device may overheat due to dust build up.

Remove dust layers in excess of 5 mm.

A CAUTION

Releasing button lock

Improper modification of parameters could influence process safety.

 Make sure that only authorized personnel may cancel the button locking of devices for safety-related applications.

NOTICE

Penetration of moisture into the device

Device damage.

Make sure when carrying out cleaning and maintenance work that no moisture penetrates
the inside of the device.

7.2 Cleaning

Cleaning the enclosure

- Clean the outside of the enclosure with the inscriptions and the display window using a cloth moistened with water or a mild detergent.
- Do not use any aggressive cleansing agents or solvents, e.g. acetone. Plastic parts or the painted surface could be damaged. The inscriptions could become unreadable.

NOTICE

Improper cleaning of diaphragm

Device damage. The diaphragm can be damaged.

Do not use sharp or hard objects to clean the diaphragm.

7.2.1 Servicing the remote seal measuring system

The remote seal measuring system usually does not need servicing.

If the mediums are contaminated, viscous or crystallized, it could be necessary to clean the diaphragm from time to time. Use only a suitable solvent to remove the deposits from the diaphragm. Do not use corrosive cleaning agents. Prevent the diaphragm from getting damaged due to sharp-edged tools.

7.3 Maintenance and repair work

WARNING

Impermissible repair and maintenance of the device

Repair and maintenance must be carried out by Siemens authorized personnel only.

WARNING

Impermissible repair of explosion protected devices

Risk of explosion in hazardous areas

Repair must be carried out by Siemens authorized personnel only.

Hot surfaces

Risk of burns during maintenance work on parts having surface temperatures exceeding 70 °C (158 °F).

- Take corresponding protective measures, for example by wearing protective gloves.
- After carrying out maintenance, remount touch protection measures.

7.3.1 Defining the maintenance interval

WARNING

No maintenance interval has been defined

Device failure, device damage, and risk of injury.

- Define a maintenance interval for recurring tests depending on the use of the device and your own experience.
- The maintenance interval will vary from site to site depending on corrosion resistance.

WARNING

Maintenance during continued operation in a hazardous area

There is a risk of explosion when carrying out repairs and maintenance on the device in a hazardous area.

- Isolate the device from power.
- or -
- Ensure that the atmosphere is explosion-free (hot work permit).

▲ WARNING

Impermissible accessories and spare parts

Risk of explosion in areas subject to explosion hazard.

- Only use original accessories or original spare parts.
- · Observe all relevant installation and safety instructions described in the instructions for the device or enclosed with the accessory or spare part.

7.3 Maintenance and repair work

A

MARNING

Hot, toxic or corrosive process media

Risk of injury during maintenance work.

When working on the process connection, hot, toxic or corrosive process media could be released.

- As long as the device is under pressure, do not loosen process connections and do not remove any parts that are pressurized.
- Before opening or removing the device ensure that process media cannot be released.

WARNING

Improper connection after maintenance

Risk of explosion in areas subject to explosion hazard.

- Connect the device correctly after maintenance.
- Close the device after maintenance work.

Refer to Connecting the device (Page 39).

7.3.2 Checking the gaskets

Inspect the seals at regular intervals

Note

Incorrect seal changes

Incorrect measured values will be displayed. Changing the seals in a process flange of a differential pressure measuring cell can alter the start-of-scale value.

 Changing seals in devices with differential pressure measuring cells may only be carried out by personnel authorized by Siemens.

Note

Using the wrong seals

Using the wrong seals with flush-mounted process connections can cause measuring errors and/or damage the diaphragm.

- Always use seals which comply with the process connection standards or are recommended by Siemens.
- 1. Clean the enclosure and seals.
- 2. Check the enclosure and the seals for cracks and damage.
- 3. If necessary, lubricate the seals or replace them.

7.3.3 Diagnostics messages

Diagnostics (e.g. sensor break) detected by the internal self-test are signaled as follows:

- Display: NE107 symbol and diagnostics ID
- Current output (4-20 mA): Fault current
- HART: Diagnostic alarm via the remote operation

For a complete list of diagnostic messages and their meaning, refer to the "Diagnostics and Troubleshooting" section in the detailed operating instructions.

7.4 Return procedure

Enclose the bill of lading, return document and decontamination certificate in a clear plastic pouch and attach it firmly to the outside of the packaging. Any devices/replacement parts which are returned without a decontamination declaration will be cleaned at your expense before further processing. For further details, refer to the operating instructions.

See also

Decontamination declaration (http://www.siemens.com/sc/declarationofdecontamination)

Return document (http://www.siemens.com/processinstrumentation/returngoodsnote)

7.5 Disposal

Devices described in this manual should be recycled. They may not be disposed of in the municipal waste disposal services according to the Directive 2012/19/EC on waste electronic and electrical equipment (WEEE).

Devices can be returned to the supplier within the EC, or to a locally approved disposal service for eco-friendly recycling. Observe the specific regulations valid in your country.

Further information about devices containing batteries can be found at: Information on battery/product return (WEEE) (https://support.industry.siemens.com/cs/document/109479891/)

Note

Special disposal required

The device includes components that require special disposal.

 Dispose of the device properly and environmentally through a local waste disposal contractor. 7.5 Disposal

100 bar a/10 MPa a/1450.3 psi a		

Effect of mounting position - absolute pressure from gauge and differential pressure series

In pressure per change of angle

- For absolute pressure (from the gauge pressure series): ≤ 0.05 mbar/0.005 kPa/ 0.000725 psi per 10° incline
- For absolute pressure (from the differential pressure series): 0.7 mbar/0.07 kPa/ 0.001015 psi per 10° incline

(zero-point correction is possible using the zero point adjustment)

8.2.6 Absolute pressure with front-flush diaphragm

Conformity error at limit point setting, including hyster	esis and repeatability		
Measuring span ratio r (spread, Turn-Down)	r = max. measuring span/set measuring span and nominal measuring range		
Linear characteristic curve	r ≤ 10	10 < r ≤ 30	
All measuring cells	≤ 0.2%	≤ 0.4%	
Effect of ambient temperature			
In percent per 28 °C (50 °F)			
All measuring cells	≤ (0.16 • r + 0.24)		
Long-term stability at ±30 °C (±54 °F)			
All measuring cells	In 5 years ≤ (0.25	• r)%	
Step response time T ₆₃ (without electrical damping)			
Approx. 0.105 s			

8.2 Measuring accuracy of SITRANS P320

Effect of mounting position

In pressure per change of angle 0.04 kPa/0.4 mbar/0.006 psi per 10° incline (zero-point correction is possible with position error compensation)

8.2.7 Gauge pressure with front-flush diaphragm

Conformity error at limit point setting, including hysteresis and repeatability - gauge pressure with front-flush diaphragm

8.6 Construction

C	Construction for gauge pressure and absolute pressure (from the gauge pressure series)	
W	eight	Approx. 1.8 kg (3.9 lb) with aluminum enclosure
		Approx. 3.8 kg (8.3 lb) with stainless steel enclosure
M	aterial	
•	Wetted parts materials	
	Process connection	Stainless steel, material no. 1.4404/316L or Alloy C22, material no. 2.4602
	Oval flange	Stainless steel, mat. no. 1.4404/316L
	Seal diaphragm	Stainless steel, material no. 1.4404/316L or Alloy C276, material no. 2.4819
•	Non-wetted parts materials	
	Electronics housing	 Low-copper die-cast aluminum GD-AlSi 12 or stainless steel precision casting, mat. no. 1.4409/ CF-3M
		 Standard: Powder coating with polyurethane Option: 2 coats: Coat 1: epoxy-based; coat 2: Polyurethane
		Stainless steel nameplate (1.4404/316L)
	Mounting bracket	Steel, galvanized, stainless steel 1.4301/304, stainless steel 1.4404/316L

Construction for gauge pres	ssure and absolute pressure (from the gauge pressure series)
Process connection	 Connection pin G¹/₂A in accordance with DIN EN 837-1
	 Female thread ¹/₂-14 NPT
	 Oval flange (PN 160 (MAWP 2320 psi g)) with fastening screw thread:
	 7/₁₆-20 UNF in accordance with EN 61518
	 M10 in accordance with DIN 19213
	 Oval flange (PN 420 (MAWP 2320 psi g)) with fastening screw thread:
	 7/₁₆-20 UNF in accordance with EN 61518
	 M12 in accordance with DIN 19213
	 Male thread M20 x 1.5 and ¹/₂-14 NPT
Electrical connection	Cable inlet using the following screwed joints:
	• M20 x 1.5
	• ½-14 NPT
	Han 7D/Han 8D connector¹)
	M12 connector

¹⁾ Han 8D is identical to Han 8U.

Construction for gauge pressure, with	flush mounted diaphragm	
Weight (pressure transmitter without	Approx. 1.8 kg (3.9 lb) with aluminum enclosure	
mounting flange)	Approx. 3.8 kg (8.3 lb) with stainless steel enclosure	
Material		
Wetted parts materials		
Process connection	Stainless steel, mat. no. 1.4404/316L	
Seal diaphragm	Stainless steel, material no. 1.4404/316L or Alloy C276, material no. 2.4819	
Non-wetted parts materials		
Electronics housing	 Low-copper die-cast aluminum GD-AlSi 12 or stainless steel precision casting mat. no. 1.4409/CF-3M 	
	 Standard: Powder coating with polyurethane D20 option: 2 coats: Coat 1: epoxy-based; coat 2: Polyurethane 	
	Stainless steel nameplate (1.4404/316L)	
Mounting bracket	Steel, galvanized, stainless steel 1.4301/304, stainless steel 1.4404/316L	
Process connection	Flanges as per EN and ASME	
	F&B and Pharma flange	
	BioConnect/BioControl	
	PMC style	
Electrical connection	Cable inlet using the following screwed joints:	
	• M20x1.5	
	• ½-14 NPTM	
	Han 7D/Han 8D connector¹)	
	M12 connector	

¹⁾ Han 8D is identical to Han 8U.

Weight	Approx. 3.9 kg (8.5 lb) with aluminum enclosure
	Approx. 5.9 kg (13 lb) with stainless steel enclosure
Material	
Wetted parts materials	
Seal diaphragm	Stainless steel, mat. no. 1.4404/316L, Alloy C276, mat. no. 2.4819, Monel 400, mat. no. 2.4360, tantalum or gold
Pressure caps and vents	Stainless steel, mat. no. 1.4408 to PN 160, mat. no. 1.4571/316Ti for PN 420, Alloy C22, 2.4602 or Monel 400, mat. no. 2.4360
O-ring	FKM (Viton) or optionally: PTFE, FEP, FEPM and NBR
Non-wetted parts materials	
Electronics housing	 Low-copper die-cast aluminum GD-AlSi 12 or stainless steel precision casting, mat. no. 1.4409/CF-3M
	 Standard: Powder coating with polyurethane D20 option: 2 coats: Coat 1: epoxy-based; coat 2: Polyurethane
	 Stainless steel nameplate (1.4404/316L)
Pressure cap screws	Stainless steel ISO 3506-1 A4-70
Mounting bracket	Steel, galvanized, stainless steel 1.4301/304, stainless steel 1.4404/316L
Process connection	1 / $_{4}$ -18 NPT female thread and flange connection with 7 / $_{16}$ -20 UNF fastening screw thread in accordance with EN 61518 or M10 fastening screw thread in accordance with DIN 19213 (M12 for PN 420 (MAWP 6092 psi))
Electrical connection	Screw terminals
	Cable inlet using the following screwed joints:
	• M20 x 1.5
	• ½-14 NPT
	 Han 7D/Han 8D connector¹⁾
	M12 connector

¹⁾ Han 8D is identical to Han 8U.

Construction for level		
Weight		
In accordance with EN (pressure	Approx. 11 13 kg (24.2 28.7 lb) with aluminum enclosure	
transmitter with mounting flange, without tube)	Approx. 13 15 kg (28.7 33 lb) with stainless steel enclosure	
In accordance with ASME	Approx. 11 18 kg (24.2 39.7 lb) with aluminum enclosure	
(pressure transmitter with mounting flange, without tube)	Approx. 13 20 kg (28.7 44 lb) with stainless steel enclosure	
Material		
Wetted parts materials		
Plus side		

8.6 Construction

Seal diaphragm on the	Stainless steel, mat. no. 1.4404/316L, Monel 400, mat. no. 2.4360, Alloy B2, mat.
mounting flange	no. 2.4617, Alloy C276, mat. no. 2.4819, Alloy C22, mat. no. 2.4602, tantalum, PTF
Sealing surface	Smooth as per EN 1092-1, form B1 or ASME B16.5 RF 125 250 AA for stainles steel 316L, EN 2092-1 form B2 or ASME B16.5 RFSF for the remaining materials
Sealing material in the pressure caps	
 For standard applications 	FKM (Viton)
For underpressure applications on the mounting flange	Copper
Minus side	
Seal diaphragm	Stainless steel, mat. no. 1.4404/316L
Pressure caps locking screws	Stainless steel, mat. no. 1.4408
Locking screw	Stainless steel ISO 3506-1 A4-70
O-ring	FKM (FKM (Viton))
Non-wetted parts materials	
Electronics housing	 Low-copper die-cast aluminum GD-AlSi 12 or stainless steel precision casting, mat. no. 1.4409/CF-3M
	Standard: Powder coating with polyurethane D20 option: 2 coats: Coat 1: epoxy-based; coat 2: Polyurethane
<u> </u>	• Stainless steel nameplate (1.4404/316L)
Pressure cap screws	Stainless steel ISO 3506-1 A4-70
Measuring cell filling	Silicone oil
Mounting flange fill fluid	Silicon oil or a different design
Process connection	Flance so nor FN and ASME
• Plus side	Flange as per EN and ASME
Minus side	1 / $_{4}$ -18 NPT female thread and flange connection with M10 fastening screw thread in accordance with DIN 19213 (M12 for PN 420 (MAWP 6092 psi)) or 7 / $_{16}$ -20 UNF in accordance with EN 61518
Electrical connection	Screw terminals
	Cable inlet using the following screwed joints:
	• M20 x 1.5
	• ½-14 NPT
	Han 7D/Han 8D connector ¹⁾
	M12 connector

¹⁾ Han 8D is identical to Han 8U.

8.7 Torques

Torques		
Terminal compartment		
Connecting terminals	0.4 to 0.8 Nm (0.3 to 0.6 ft lb)	
Cable glands/blanking plugs		
Screw-in torque for plastic gland in all enclosures	4 Nm (3 ft lb)	
 Screw-in torque for metal/stainless steel glands in aluminum/stainless steel enclosure 	6 Nm (4.4 ft lb)	
Screw-in torque for NPT adapter made of metal/stainless steel in aluminum/stainless steel enclosure	15 Nm (11.1 ft lb)	
Tightening torque for union nut made of plastic	2.5 Nm (1.8 ft lb)	
Tightening torque for union nut made of metal/stainless steel	4 Nm (3 ft lb)	
Screws for mounting bracket (option)		
 Tightening torque for thread M8 or ⁵/₁₆-24 UNF 	18 Nm (13.2 ft lb)	
 Tightening torque for thread M10 or ⁷/₁₆-20 UNF 	36 Nm (26.5 ft lb)	
Retaining screws for rotation of the enclosure		
Tightening torque for aluminum enclosure	3.8 Nm (2.8 ft lb)	
Tightening torque for stainless steel enclosure	3.5 Nm (2.5 ft lb)	

8.8 Display, keyboard and auxiliary power

Display and user interface	
Buttons	4 buttons for operation directly on the device
Display	With or without integrated display (optional)
	Cover with inspection window (optional)

Auxiliary power U _H	
	HART
Terminal voltage on pressure transmitter	• DC 10.5 V 45 V
	 In the case of intrinsically safe operation 10.5 V 30 V DC
Ripple	U _{SS} ≤ 0.2 V (47 125 Hz)
Noise	U _{eff} ≤ 1.2 mV (0.5 10 kHz)
Auxiliary power	
Separate supply voltage	

8.9 Certificates and approvals

Certificates and approvals	
Classification according to pressure equipment directive (PED 2014/68/EU)	 For gases of fluid group 1 and liquids of fluid group 1; complies with requirements of article 4, paragraph 3 (sound engineering practice)
	 Only for flow rate: For gases of Fluid Group 1 and liquids of Fluid Group 1; fulfills the basic safety requirements as per article 3, Para 1 (appendix 1); classified as category III, module H conformity evaluation by TÜV Nord
Drinking water	Available soon

A.1 Technical support

Technical Support

If this documentation does not provide complete answers to any technical questions you may have, contact Technical Support at:

- Support request (http://www.siemens.com/automation/support-request)
- More information about our Technical Support is available at Technical support (http://www.siemens.com/automation/csi/service)

Internet Service & Support

In addition to our documentation, Siemens provides a comprehensive support solution at:

• Service&Support (http://www.siemens.com/automation/service&support)

Personal contact

If you have additional questions about the device, please contact your Siemens personal contact at:

Partner (http://www.automation.siemens.com/partner)

To find the personal contact for your product, go to "All Products and Branches" and select "Products & Services > Industrial Automation > Process Instrumentation".

Documentation

You can find documentation on various products and systems at:

Instructions and manuals (http://www.siemens.com/processinstrumentation/documentation)
