A PROCESS REFRACTOMETER FOR CONCENTRATION MEASUREMENT OF LIQUIDS

VAISALA

Vaisala K-PATENTS® Process Refractometer PR-23-GP

TYPICAL APPLICATIONS

CHEMICALS

Acetic acid, Acrylate, Amine oxide, Amino acid, Ammonium fluoride, Ammonium hydroxide, Ammonium nitrate, Ammonium sulphate, Caustic soda, Cellulose derivates, Citric acid, Copper chloride, Chromium trioxide (or Chromic acid), Ethylene glycol, Formaldehyde, Formic acid, Glycerol, Hydrogen peroxide, Iron chloride, Lactic acid, Lubricating oils, Nickel chloride, Nitric acid, Oleum, Polyamides, Polycarbonates, Polyethylene, Resins, Sodium bicarbonate, Sodium dichromate, Sodium gluconate, Sodium hydroxide, Styrenes, Sulphuric acid, Urea, etc.

PLASTICS AND FIBERS

Acetate, Acrylics, Adipic acid, Caprolactam, Cyclohexanol, Cyclohexanon, Dimethylterephthalate, Dimethylformamide, Fiberglass, Hexamethylene diamine, Nylon salt, Polyamides, Polyesters, Rayon, Spandex, Vinyls. Finishing, coating and dyeing mediums of textiles.

PULP AND PAPER INDUSTRY

Alum, Black liquor, CMC, Latex, Sizing chemicals and binders, Starch, PVA, Retention chemicals.

SALTS AND SODIUM COMPOUNDS

Brine, Glauber's salt, Sodium carbonate, Sodium chloride, Sodium sulfate, Sodium sulfite, etc.

SOAP AND DETERGENTS

Fatty acids, Fatty alcohols, Caustic potash, Caustic soda, Glycerol, Salt, Soda ash, Sodium bicarbonate

STARCH SWEETENERS

Fructose, high fructose corn syrup, sorbitol, dextrose, glucose, xylose, maltose, mannitol, lactitol, aspartame, flavors. Supersaturation and seeding point control of fructose and dextrose syrups, cooling crystallizer, precrystallizer, main crystallizer.

SUGAR

Sucrose, affination, extraction, press water, thick juice, thin juice, vacuum pan, molasses, mother liquor. Supersaturation and seeding point control, cooling crystallizer, precrystallizer, main crystallizer.

INSTALLATION

MEDIUM AND LARGE PIPES

PIPES 2" OR SMALLER

DUAL CONNECTIVITY

The Process Refractometer PR-23-GP sensor is factory calibrated to measure refractive index $n_{\rm D}$ and temperature T in standard units. Each sensor has identical calibration $n_{\rm D}\!=\!1.32...1.53$ (corresponding to 0-100 Brix). One or two sensors can be connected to one Indicating transmitter.

Because the PR-23 sensors have identical calibration, and each sensor gives Refractive Index $\,\mathrm{n_D}$ and temperature as output, all sensors can be freely interchanged without any inconvenience of optical calibration or parameter changes.

The non-linear conversion from refractive index to concentration units and also temperature compensation are based on standard tables. They are programmed inside the transmitter independently of the sensor.

Our manufacturing process is ISO 9001 certified. We also support the verification within the user's own quality system.

Each sensor is provided with a calibration certificate comparing a set of standard liquids to the actual sensor output. Therefore, the calibration and accuracy can be easily verified on-site with the certified refractive index liquids and our documented verification procedure.

DIGITAL MEASUREMENT PRINCIPLE

The light source emits light at the interface, between a prism and the process solution, where the rays meet the surface at different angles.

Depending on the angle, some rays undergo a total internal reflection. The rest of the light is refracted into the process solution.

Thus an optical image with a dark sector and a light sector is created.

The angle corresponding to the shadow line is called the Critical Angle of Total Reflection. The Critical Angle is a function of the refractive index and therefore the concentration of the solution.

A digital CCD-camera detects the optical image and the shadow line. The camera transforms the optical image point-by-point to an electrical signal. The exact shadow line position is located and the refractive index \mathbf{n}_{D} is determined.

A built-in temperature sensor measures the temperature T on the interface of the process liquid. The indicating transmitter converts the refractive index $\rm n_{\rm D}$ and temperature T to concentration units.

The diagnostics program ensures that the measurement is reliable.

OPERATION

The Process Refractometer PR-23-GP provides truly accurate means for measuring liquid concentrations and Brix in various process applications. The PR-23-GP refractometer determines the concentration of dissolved solids by making an optical measurement of a solution's refractive index.

The measurement accuracy is not influenced by particles, bubbles, sugar crystals, seeds, fibres, colour or temperature changes in the process medium. Refractometer PR-23-GP does not require any recalibration or regular maintenance.

DATA LOGGING VIA ETHERNET

Refractometer PR-23-GP includes an Ethernet based communications solution which allows connection to computer networks (LAN) and to the Internet. Real-time measurement data and diagnostic information may be obtained through this interface, and this makes it also a valuable service tool for parameter changes and software updates.

Only a cross-over cable and data acquisition software are needed for collecting the data from a PR-23 refractometer. The communication is built on standard protocols (UDP/IP) and we offer ready-to-install software for data acquisition.

Our data acquisition software is expandable in case the user wants to modify the program. The program is written in Java and thus system independent. It can be tailored to almost any computing environment.

SPECIFICATIONS

Sensor PR-23-GP with Sandvik coupling L

Sensor PR-23-GP with ANSI/DIN/JIS flange

Indicating transmitter DTR

Repeatability n ₀ ± 0.0001 (corresponds typically to ±0.05% by weight) Speed of response: 1 s undamped, damping time selectable up to 5 min CoRE-Optics: No mechanical adjustments Digital measurement: 3648 pixel CCD element Light source: Light emitting diode (LED), 589 nm wavelength, sodium D-line Temperature sensor: Built-in P-11000, linearization according to IEC 751 Temperature compensation: Instrument verification: With NIST traceable Cargille standard R.I. liquids.
