

LEVEL MATTERS

Did you know?

The capabilities of the SITRANS LT500 HydroRanger are superior to the ones offered by the LUT400. The LT500 can log:

- 9 process values
- 81 parameters
- 20 logging intervals (10ms-24hr)

Additionally, we calculated that if we log 9 values every 2 minutes, the LT500 will log for 260 years before filling an 8GB card. Essentially, the microSD card's storage capacity can last several lifetimes before it runs out.

Note that you can even access the manual, either by plugging the microSD card on your laptop or by connecting a USB cable to the LT500.
