1 Introduction

1.1 Read the manual

- Please read this manual carefully and completely before using the product.
- This manual is part of the product. Keep it in a safe and easily accessible location.

1.2 This is what operating instructions look like

1. - n. are placed before steps that must be done in sequence.
 - is placed before a step.
 - ▷ describes the result of a step.

1.3 This is what lists look like

- indicates an item in a list.

1.4 This is what menu items and softkeys look like

[] frame menu items and softkeys.

Example:

[Start]- [Applications]- [Excel]

1.5 This is what the safety instructions look like

Signal words indicate the severity of the danger involved when measures for preventing hazards are not followed.

DANGER

Warning of personal injury

DANGER indicates death or severe, irreversible personal injury which will occur if the corresponding safety measures are not observed.

- Take the corresponding safety precautions.

WARNING

Warning of hazardous area and/or personal injury

WARNING indicates that death or severe, irreversible injury may occur if appropriate safety measures are not observed.

- Take the corresponding safety precautions.

CAUTION

Warning of personal injury.

CAUTION indicates that minor, reversible injury may occur if appropriate safety measures are not observed.

- Take the corresponding safety precautions.

NOTICE**Warning of damage to property and/or the environment.**

NOTICE indicates that damage to property and/or the environment may occur if appropriate safety measures are not observed.

- Take the corresponding safety precautions.
-

Note:

User tips, useful information, and notes.

1.6 Hotline

Phone: +49.40.67960.444

Fax: +49.40.67960.474

eMail: help@minebea-intec.com

2 Overview

2.1 General information

These operating instructions describe the configuration and operation of the "Count" application.

For installation, basic configuration, and calibration of the device, please refer to the PR 5900 installation manual and the operating instructions.

2.2 Equipment supplied

2.2.1 Components

The Count product consists of the following components:

- Maxxis 5 basic unit with software "BIOS," "firmware" and application software "Count", including license
- Manuals in PDF format on CD-ROM

The "Count" application requires installation of the following programs in the device:

- BIOS
- Firmware
- Application "Count"

PR 1721/5x or PR 1721/7x fieldbus cards are supported, see Chapter [2.2.3](#).

The application supports Alibi memory, see Chapter [2.2.2](#).

2.2.2 Accessories (not included with the equipment supplied)

- Plug-in cards for Option-1, Option-2, see Chapter [2.2.3](#)
- Software (license):
 - PR 1792/13 OPC server communication
 - Alibi memory
- Scales:

A maximum of 4 scales can be controlled and displayed.

- PR 5900/10 (W1) Internal weighing electronics (max. 2)
- PR 5900/10 (WE1) Internal Ex weighing electronics (max. 1)
- Platform/scale with xBPI protocol (max. 3)

The digital load cells (of type Pendo) are connected over a maximum of 2 serial RS-485 interfaces and a digital connection counter.

Note:

The following weighing functions are **not** supported:

- The totalizing function (tandem scale): WP A + WP B = WP C
-

2.2.3 Plug-in cards

Product	Description	Position
PR 5900/04 2 x RS-485 serial interfaces	The interface can be configured by software. For further information, refer to the PR 5900 installation manual.	Option-1 and/or Option-2
PR 5900/07 1 analog input 1 analog output	Analog input: internal 14 bits binary = 20,000 counts, @ e.g. 0...20 mA/0...10 V Analog output: internal 16 bits = 65,536 counts, resolution of 20,000 @ 20 mA For further information, refer to the PR 5900 installation manual.	Option-1 and/or Option-2
PR 5900/10 (W1) Weighing electronics	Internal weighing electronics for connecting load cells or weighing platforms in non-Ex areas. A maximum of two internal weighing electronics units can be inserted. For further information, refer to the PR 5900 installation manual.	WP A and/or WP B
PR 5900/10 (WE1) Weighing electronics with Ex approval	Internal weighing electronics for connecting load cells or weighing platforms in Ex areas. A maximum of one internal weighing electronics unit can be inserted. For further information, see Option WE1 additional information.	WP A
PR 5900/12 4 digital inputs 4 digital outputs	4 passive opto-decoupled inputs 4 relay outputs with potential-free change-over contacts For further information, refer to the PR 5900 installation manual.	Option-1 and/or Option-2
PR 5900/13 4 digital inputs 4 digital outputs	4 active opto-decoupled inputs 4 relay outputs with potential-free change-over contacts For further information, refer to the PR 5900 installation manual.	Option-1 and/or Option-2
PR 5900/17 6 digital inputs 8 digital outputs	6 passive opto-decoupled inputs 8 passive opto-decoupled outputs For further information, refer to the PR 5900 installation manual.	Option-1 and/or Option-2
PR 5900/32 2 RS-232 serial interfaces	The interface can be configured by software. For further information, refer to the PR 5900 installation manual.	Option-1 and/or Option-2

Product	Description	Position
CX1 Module with Ex approval	Connection for remote terminal PR 5900/6x, PR 5900/7x For further information, see Option CX1 additional information.	Remote Terminal
PR 1721/51 ProfiBus-DP	ProfiBus DP V0 slave with 9.6 kbit/s...12 Mbit/s, baud rate auto-detection For further information, refer to the PR 5900 installation manual.	Option-FB
PR 1721/54 DeviceNet	DeviceNet master-slave with 125, 250, and 500 kbit/s For further information, refer to the PR 5900 installation manual.	Option-FB
PR 1721/55 CC-Link	CC-Link master-slave with 10 Mbit/s For further information, refer to the PR 5900 installation manual.	Option-FB
PR 1721/56 Profinet I/O	Profinet I/O with 10 Mbit/s and 100 Mbit/s, auto-detection (10/100, HalfDX/FullDX) For further information, refer to the PR 5900 installation manual.	Option-FB
PR 1721/57 EtherNet IP	EtherNet IP with 10 Mbit/s and 100 Mbit/s, auto-detection (10/100, HalfDX/FullDX) For further information, refer to the PR 5900 installation manual.	Option-FB
PR 1721/76 Profinet I/O 2-port	Profinet I/O with 10 Mbit/s and 100 Mbit/s, auto-detection (10/100, HalfDX/FullDX) For further information, refer to the PR 5900 installation manual.	Option-FB
PR 1721/77 EtherNet IP 2-port	EtherNet IP with 10 Mbit/s and 100 Mbit/s, auto-detection (10/100, HalfDX/FullDX) For further information, refer to the PR 5900 installation manual.	Option-FB

2.3 Function of application "Count"

2.3.1 General information

The Count application is used for daily quality control in industry.

It fulfills the highest reliability requirements for weighing results in

- the food industry
- the pharmaceutical industry
- the chemical industry
- the electronics and metal industries.

The following functions are available:

- Counting
- Check weighing
- Totalizing

The master data of products will be collected and can be expanded by so-called "identifiers." These are included on any printouts that are generated.

2.3.2 Counting

The number of parts is determined using this function.

- Features, see Chapter [2.3.2.1](#)
- Single scale, see Chapter [2.3.2.2](#)
- Two scales simultaneously, see Chapter [2.3.2.3](#)
- Calculation, see Chapter [2.3.2.4](#)

2.3.2.1 Characteristics

- Entering the reference sample weight using the keyboard
- Saving the reference sample weight from the weighing platform
- Entering the reference quantity using the keyboard
- Specifying the reference quantity "nRef" via parameters.
- Automatic piece weight optimization
- It is possible to define the level of accuracy applied when a calculated reference sample weight is saved
- Automatic taring of container weight
- When the scale is switched on the last reference quantity used is displayed (factory default setting: 10 pcs) and the last used reference sample weight.
- Switch back and forth between piece and weight using the [Weight] and [Piece] soft keys
- Selection of product data memory
- Defining and configuring the product data memory
- Counting with one or more scales.

A single scale or multiple scales can be used simultaneously for counting.

- Single scale, see Chapter [2.3.2.2](#)
- Two scales simultaneously, see Chapter [2.3.2.3](#)

2.3.2.2 Single scale

A single scale can be used for counting when the parts to be counted have a piece weight that is nearly equal.

2.3.2.3 Two scales simultaneously

Two scales can be used for counting when the weight difference between the parts to be counted is very high. There are two different operating modes:

- Counting with two platforms of the same type
Use this mode to count different types of sample material with different weights. For example, count the lighter pieces on one platform and the heavier pieces on another.
- Counting with one reference platform and one weighing platform
In this mode, the reference platform is a high-resolution scale with a relatively low maximum capacity. The other platform is used for weighing heavier samples and has a high capacity with a relatively low resolution. This configuration allows you to determine the average piece weight with a high resolution and count very precisely on the weighing platform.

2.3.2.4 Calculation

Before the quantity on the platform can be calculated, the average piece weight (reference piece weight) must be known. The calculation of the piece weight can be carried out in four different ways:

- Placing the number of parts defined as the reference quantity on the scale and calculating the average piece weight by pressing the [Start] soft key and/or [n=10].
- Place any number of parts on the scale, enter the number of parts using the keyboard, and then press the [Start] soft key to calculate the average piece weight.

Note:

How the reference weight is calculated depends on the application setting for resolution. This can be set in the operating menu under [Configuration] - [Applications] - [Counting] - [Accuracy of piece weight calculation].

Selection: Display accuracy, +1 decimal place, +2 decimal places, Internal trigger

- Entering a reference sample weight (i.e., the weight of one piece) using the keyboard and saving it.
- Opening the product memory in which the reference sample weight of the product is saved.

After initialization, you can use the connected weighing platform to count parts. The initialization values are active until deleted or until overwritten by a new value. The non-permanent values for the "0" product are lost after shut-off.

2.3.3 Check weighing

- Task, see Chapter [2.3.3.1](#)
- Features, see Chapter [2.3.3.2](#)
- Set point input, see Chapter [2.3.3.3](#)

2.3.3.1 Task

With this function, you can check whether the sample matches a set point or lies within a given tolerance range. Check weighing also makes it easy to fill sample materials to a specified set point.

2.3.3.2 Characteristics

- Enter the set point and the tolerance range (min. and max. value) or as a percentage deviation via the keyboard, or save the weight value from the weighing platform.
- Enter the tolerance limits as absolute values (min. and max. values) or as percentages of the set point.

This can be set in the operating menu under [Configuration] - [Applications] - [Check weighing] - [Type of control value input].

- Results are output to the main display as a colored bar graph (yellow, green, red) as well as sent to control output ports for further electronic processing.
- The weight value representation is shown in a display window: "LL"(too low) or "HH" (too high). For the limit value, if the weight in the readout is outside the tolerance range, "LL" (too low) or "HH" (too high) is displayed.
- Automatic printout of results.

This can be set in the operating menu under [Configuration] - [Applications] - [Check weighing] - [Automatic printout of results].

- Automatic taring of container weight.

This can be set in the operating menu under [Configuration] - [Parameters] - [Auto. tare 1st weight].

2.3.3.3 Set point entry

Check weighing entails comparing the current weight value to a defined set point. You can enter the value for this set point using the keyboard, or by saving the weight value indicated. You can also define upper and lower tolerance limits based on this set point. You can do this by:

- Entering absolute values using the keypad or placing the desired amounts of weight on the platform and saving the values
 - or
- by entering each value as a percentage deviation of the set point.

The initialization data remains valid until deleted or until overwritten by a new value. They remain saved after switch-off.

2.3.4 Totalizing

This function is used to total weight values.

The device has a totalizing memory for totalizing individual net and gross values. You can save weight values in totalizing memory manually or automatically.

Features, see Chapter [2.3.4.1](#)

2.3.4.1 Characteristics

- Up to 9999 items can be weighed in.
- One totalizing memory for each product memory.
- Simultaneous saving of net values and calculated values (if available).

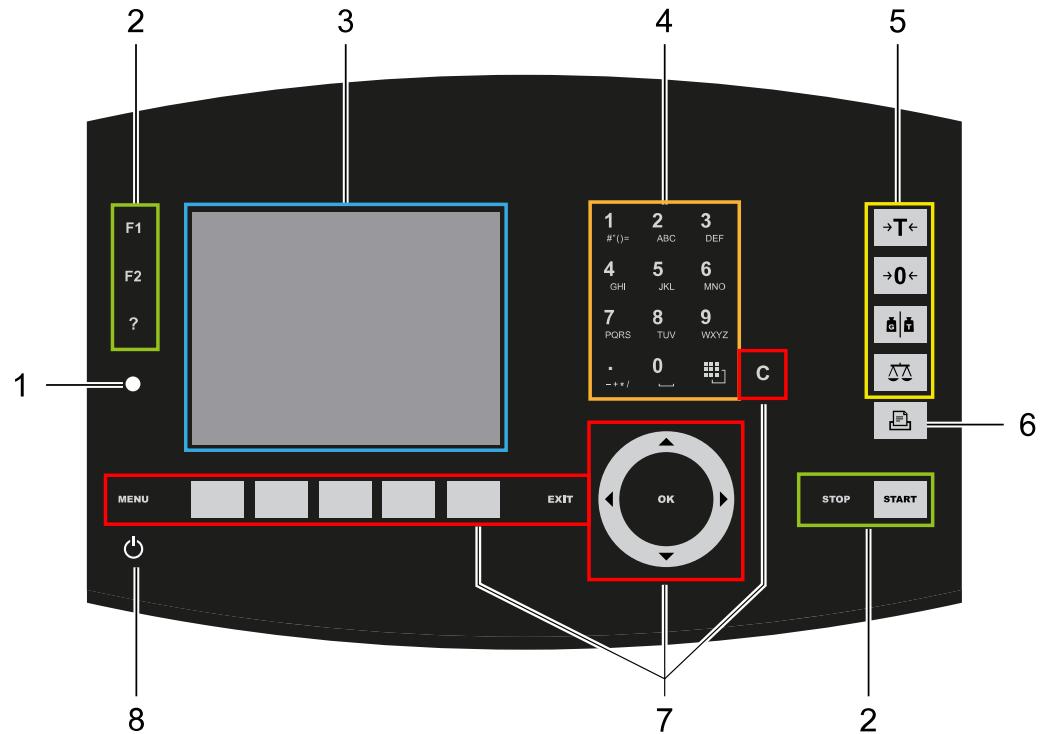

This can be set in the operating menu under [Configuration] - [Applications] - [Check weighing] - [Saved value].

- Current transaction number displayed in the text line (indicating the transactions already added).
- Weighing in up to a total weight, with the totalizing memory content plus the current weight on the scale displayed in the text lines.
- Saves weight values manually or automatically.
- Accurate calculation of total of weight values from two weighing platforms.
- Automatic printout when value saved.
- Automatic taring of container weight.
This can be set in the operating menu under [Configuration] - [Parameters] - [Auto. tare 1st weight].
- Totalizing memory saved in battery-backed memory when the device is switched off.

3 Operating

3.1 Display and operating elements

3.1.1 Overview

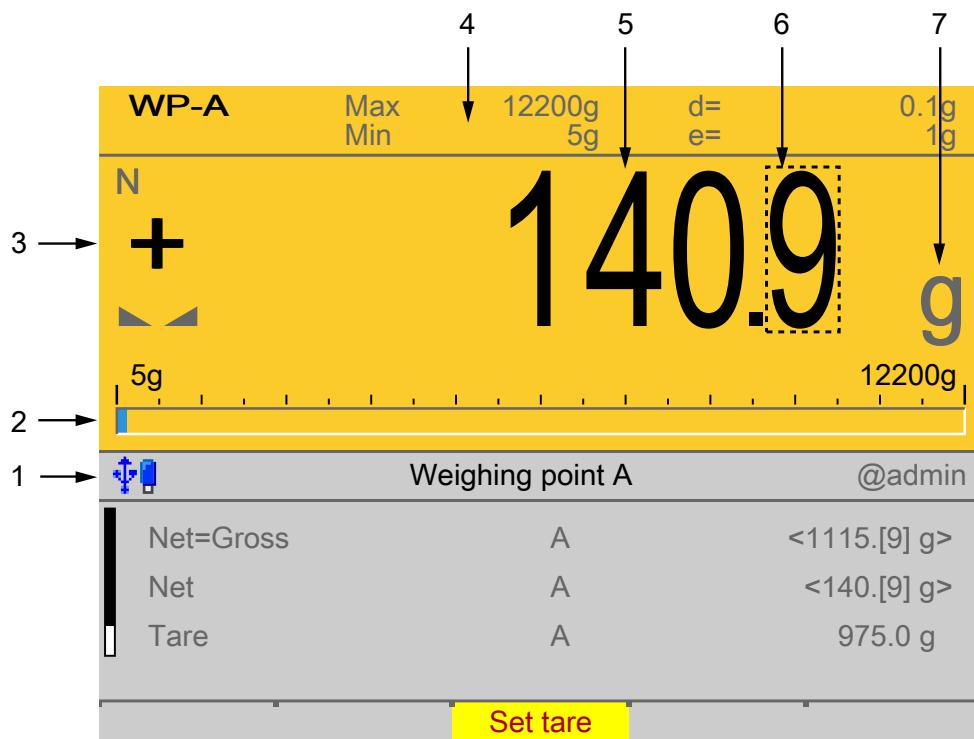

No.	Name
Display elements	
1	LED status display, see Chapter 3.1.3
3	5.7" TFT color display, see Chapter 3.1.2
Operating elements, see Chapter 3.1.4.1	
2	Function keys
4	Alphanumeric keypad
5	Indicator keys
6	Application keys
7	Navigation/menu keys, incl. soft keys
8	On/off button

3.1.2 TFT user interface display

The TFT color graphics display can show weight values of up to 7 digits with decimal point and plus or minus sign. The available mass units are t, kg, g, mg, lb, or oz.

The lb and oz units are not permitted for use in legal metrology in the EU and EEC.

Below the weight display, the currently displayed weight is shown in a bar graph that indicates the percentage of the maximum capacity (Max). 0 is on the left, and 100% on the right.

No.	Description
1	Info line
2	Bar graph
3	Weight type/plus or minus sign/standstill
4	Status display
5	Weight value
6	Border around decimal place
7	Symbols/mass unit

Weight type/plus or minus sign	Description
B	Gross weight
G	Gross weight in NTEP or NSC mode
T	Tare weight
PT	Preset tare, not tared

Weight type/plus or minus sign	Description
No display	- Test value - Gross, not tared
User	Additional weight display, application-dependent
Setup	Additional weight display, application-dependent
Diff	Additional weight display, application-dependent
+	Positive value
-	Negative value
Standstill/zero/batching/monitoring	Description
	Weight value standstill
	The gross weight value is within ±1/4 d of zero
	Batching mode: flashes when batching is "stopped"; rapid flashing indicates "error status"
	Pendo load cells: Plausibility monitoring; the average deviation of the individual load cells is calculated
	Pendo load cells: Temperature monitoring; 1-n load cells above or below permissible temperature
Symbols/mass unit	Description
	Value not permissible in legal metrology (e.g., 10x resolution, deactivated load cell)
R1	Range 1
R2	Range 2
R3	Range 3
WP A	Weighing point A
WP B	Weighing point B
WP C	Weighing point C
WP D	Weighing point D
Max	Maximum capacity (weighing range)
Min	Minimum weight
	Only if W&M is selected: Border around inadmissible decimal place.
t, kg, g, mg, lb, oz	These mass units are available.

Bar graph

Diagram	Description
Bar graph	The result is displayed in the bar graph as a color. <ul style="list-style-type: none"> - Yellow: weight value < lower tolerance limit - Green: weight value is within OK range - Red: weight value > upper tolerance limit
Additional window	There are additional displays: <ul style="list-style-type: none"> - "LL" is shown on the display for weight values < lower tolerance limit. - "HH" is shown on the display for weight values > upper tolerance limit.

Status icons in the info line

Icon	Description
	Remote control via VNC (Virtual Network Computing) is active.
	General warning
	<ul style="list-style-type: none"> - The clock battery is empty. - The standby battery is empty.
	<p>The standby battery is too hot and is not charging. If this does not go away, the ambient temperature must be checked, see PR 5900 installation manual under [Technical data] - [Environmental influences] - [Ambient conditions].</p>
	<ul style="list-style-type: none"> - An unsupported USB device is connected. - The maximum current of $i_{max} = 200$ mA has been exceeded.
	Check newly connected devices.
	USB stick was recognized and is operational.
	Stick is in use and may not be removed.
	Conflict in the network settings of the IP address.
	Interface (CX1) was detected. However, there is no connection to the operator terminal.

3.1.3 LEDs

Operating status	Color	LED status	Description
Normal operation	Off		

Operating status	Color	LED status	Description
System ready (standby)	Red	Continuous illumination	The display is switched off.
Power interruption <5 seconds	Red	Slow flashing	After 5 seconds, the device returns to normal operation.
Power interruption >5 seconds	Red	Fast flashing	The device is running a data backup. Once power is restored, the device returns to normal operation (LED off).
After the data backup, there is still a power interruption.	Off		The device switches off.
	Off		The device initiates a warm start, see PR 5900 operating instructions.

3.1.4 Operating elements

- Operation using the front-panel keys, see Chapter [3.1.4.1](#)
- Operation using the soft keys, see Chapter [3.1.4.2](#)
- Operation using the navigation keys, see Chapter [3.1.4.3](#)
- Operation using the PC keys, see Chapter [3.1.4.4](#)

3.1.4.1 Operation using the front-panel keys

The following table shows the basic meanings of the symbols on the front-panel keys. Depending on the applications, the keys may also have other meanings.

Indicator keys

Key	Description
	Set tare The current gross weight is stored in the tare memory, provided that <ul style="list-style-type: none"> - the weight value is stable. - the device is not in error status. (Function is dependent on configuration)
	Sets gross weight to zero , provided that <ul style="list-style-type: none"> - the weight value is stable. - weight is within zero setting range. (Function is dependent on configuration)
	Display gross/tare weight Pressing the key switches to the next weight (only with tared scale). During calibration, pressing this key displays the weight for 5 seconds with 10x resolution.

Key	Description
	<p>Switching of display between the weighing points:</p> <ul style="list-style-type: none"> - WP-A - WP-B - WP-C - WP-D

Application keys

Key	Description
	Starts an application-specific printout.

Navigation keys

Key	Description
▲	Scroll up in the menu.
▼	Scroll down in the menu.
◀	<ul style="list-style-type: none"> - Cursor to the left - Selection - Exit menu window.
▶	<ul style="list-style-type: none"> - Cursor to the right - Selection - Confirm input/selection.

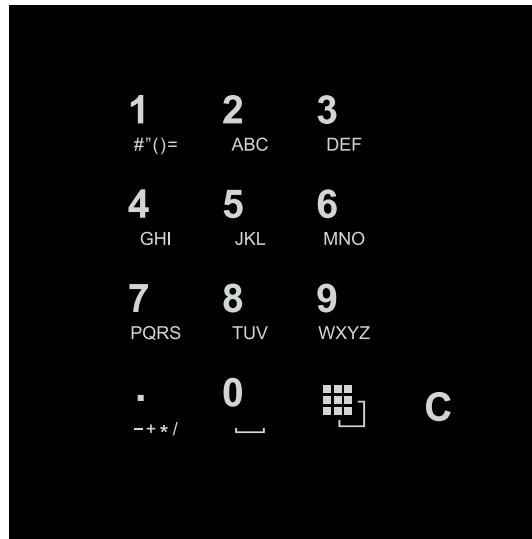

Menu keys

Key	Description
OK	Confirm input/selection.
EXIT	<ul style="list-style-type: none"> - Cancel entry/selection (after a confirmation prompt) without saving the change. - Exit parameters/menu window.
C	Pressing the delete key deletes individual characters (within an entry) or whole strings of characters.
Soft key 1 to 5	Select appropriate menu function, see also Chapter 3.1.4.2 .
MENU	Switch to the operating menu.

Function keys

Key	Description
F1	Assigned to a defined function (see system menu [System setup] - [Operating parameters]).
F2	Assigned to a defined function (see system menu [System setup] - [Operating parameters]).
?	Displays the relevant help window.
	<ul style="list-style-type: none"> - Turns off the display. - Ignores all key presses. - LED is red. <p>Pressing again will switch the display on again.</p>
	No function
	Stops an application-specific function.

Alphanumeric keypad

Toggle key

Pressing switches between the following functions:

- Uppercase letters
- Lowercase letters
- Pinyin
When Chinese has been selected or set under [Operating parameters] - [Input method].
- Hepburn
When Japanese has been selected or set under [Operating parameters] - [Input method].
- Numbers
- Units
Select the unit using the cursor keys ▲/▼ and confirm using the key **OK**.

Note:

It is also possible to select a unit by double-clicking on the shift key.

2

ABC

Input without the character table

Pressing once displays the corresponding first character, e.g., "A", at the cursor position. After pressing twice, "B" is displayed at the cursor position and after pressing three times, "C" is displayed.

Press the cursor keys ▼/▲ to finish entering a character or wait approx. 2 seconds.

If only numeric values are required for input, letters are not enabled.

Press the cursor key ◀ within an entry to return to the previous character.

Press the cursor key ▶ within an entry to select the next character.

Within an entry, pressing the delete key **C** deletes the character to the left of the cursor.

Outside of an input, pressing the delete key **C** deletes the whole string of characters.

Input with the character table

Double-clicking on the key displays the character table.
Only characters authorized for this input are displayed.

Note:

Only possible when entering text, not when entering numbers or weights.
The switching function is turned off.

Procedure:

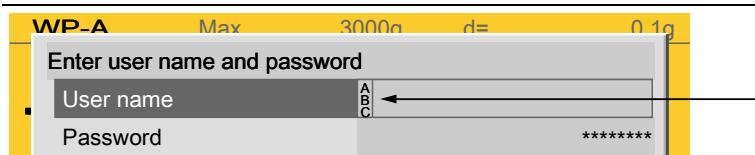

- Highlight the desired character with the cursor.
- The selected character is shown magnified in the field at the top right.
- Press the key **OK** to enter the character in the input field.
- Another double-click on the toggle key and other characters can be input as described previously.

Input field

In principle:

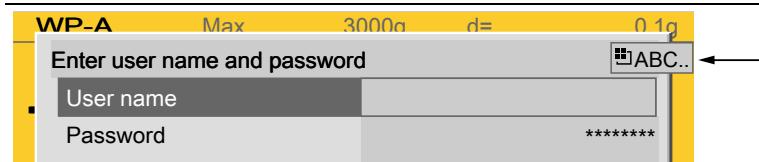

If alphanumeric characters are already present in the input field of the selected line, they will be completely overwritten after immediate entry.

If alphanumeric characters are already present in the input field of the selected line, you can press the cursor key **►** to select the characters to be overwritten and overwrite them.

In front of the input field it is indicated whether numeric and/or alphabetic characters can be entered (see arrow).

Switch to the input field using the cursor key **►**.

The respective options are displayed (see arrow).

Note:

The character table is turned off.

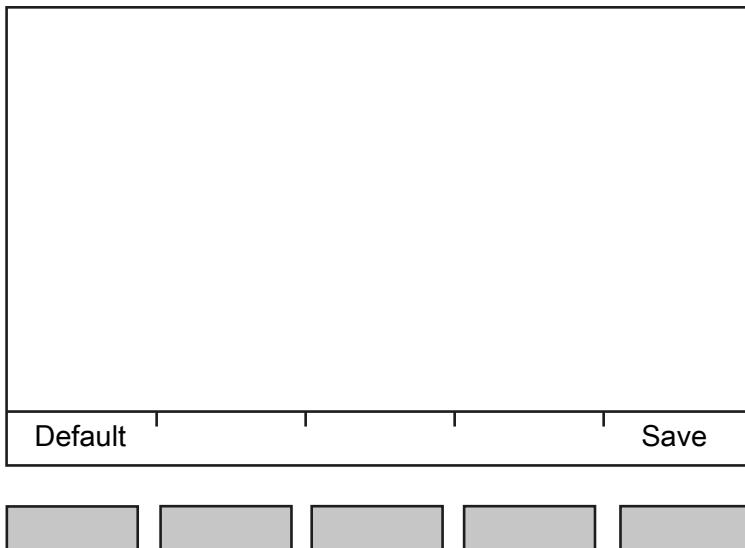

Keyboard shortcuts

Trigger a cold start, see also PR 5900 operating manual.

3.1.4.2 Operation using softkeys

The functions of the five softkeys below the graphic display are indicated in the bottommost text line of the display. Softkey functions shown in gray cannot be selected at the active menu level or with the current access privileges.

In the descriptions of operating sequences which entail the use of softkeys, the softkey function to be selected is shown in square brackets; the softkey symbol is not displayed; example: [Save].

3.1.4.3 Navigation key operation

Menu

The cursor keys, the **OK** and **EXIT** keys are used to navigate through the menus.

Parameters

Use the ▼/▲ cursor keys to select the individual parameters.

Use the **OK** key to confirm the selection.

The required values | texts are entered via the alphanumeric keys.

The **OK** key is used to check the box.

If the list of parameters is long, a vertical bar graph on the left (black and gray) shows which part of the list is displayed.

An existing selection list is indicated by an arrow ► following it.

The parameter is selected using the **OK** key.

3.1.4.4 Operation via PC keys

The device can also be operated using a PC keyboard. The corresponding key assignment is shown in the table below:

PC keyboard	Front keypad
F1	F1
F2	F2
F3	?
F4	MENU
F5...F9	Softkey 1...5
F10	
F11	
F12	
ESC	EXIT
Cursor keys: ↑, ↓, ←, →	▲, ▼, ◀, ▶
Enter key: ↴	OK
Backspace key: ←	C
Numeric keypad	Alphanumeric keypad

4 Setting up the application menu

4.1 Production

Production display of the selected application.

Production

– Counting application / weighing application	Select under [Configuration] - [Parameters] - [Basic application]
– ID	Identification of the weighing, also appears on the printout. Input: 20 alphanumeric characters
– Initialize	This soft key is only displayed when the "Check weighing active" menu item was selected under [Configuration] - [Parameters]. Input: Set point weight, minimum weight and maximum weight.
– Memory	The entered values are saved to the product data memory.
– Weight	Apply the set point values, minimum values, and maximum values entered under "Initialize" as weight values.
– Start	Counting starts with the default setting n = 10 units.

4.2 Databases

Databases

– Product database	Creating records for products, see Chapter 4.2.1 .
– Tare database	Creating records for tare memory, see Chapter 4.2.2 .

4.2.1 Product database

Databases

– Product database

Create data records for products.

Product database

– New/Edit	Edit/Create a new data record.
– Product	Identification (short name) Input: 15 alphanumeric characters
– Product name	Identification (long name) Input: 20 alphanumeric characters
– Reference weight	Enter value.
– Set point weight	Enter value.
– Minimum weight	Enter a value < set point.
– Maximum weight	Enter a value > set point.
– Set point quantity	The value is calculated.
– Min. quantity	The value is calculated.
– Max. quantity	Upper limit of the set point is projected based on the quantity.
– Tare memory	Select tare memory from the database.

<ul style="list-style-type: none"> – Product ID 1...4 – Default – Save 	<p>Additional description for product. Input: max. 20 alphanumeric characters Settings are reset to factory settings. The settings are saved.</p>
---	---

4.2.2 Tare database

Databases <ul style="list-style-type: none"> – Tare database 	<p>Create data records for tare memory.</p>
--	---

Tare database <ul style="list-style-type: none"> – New/Edit – Tare memory – Tare name – Tare value – Default – Weight – Save – Delete – Delete – Print 	<p>Edit/Create a new data record. Identification (short name) Input: 15 alphanumeric characters Identification (long name) Input: 20 alphanumeric characters Enter/Save value. Settings are reset to factory settings. The displayed weight is saved. The settings are saved. Delete data records. Selection: All, Selected, Cancel Delete data records. Selection: All, Selected, Cancel Print data records. Selection: All, Select</p>
---	--

4.3 Configuration

Configuration <ul style="list-style-type: none"> – inputs – Outputs – ModBus-TCP master – Limit values – Applications – Parameters – Print parameters – Printing 	<p>See Chapter 4.3.1. 	<ul style="list-style-type: none"> – Limit values – Weighing point – Limit value 1...2 On – Limit value 1...2 Off – Default – Save 	<p>Weighing point A...D Enter 0...Max (maximum capacity); Adopt unit from the calibration. Enter 0...Max (maximum capacity); Adopt unit from the calibration. Settings are reset to factory settings. The settings are saved.</p>

4.3.5 Applications

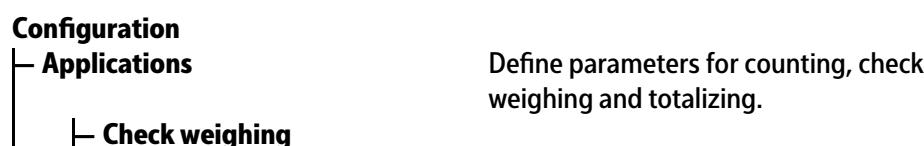

4.3.5.1 Counting

Counting	
Min. weight for initialization	The minimum weight that must be placed on the weighing platform, for example, in order to start an initialization. For a scale interval of, e.g. 1 kg, this results in <ul style="list-style-type: none"> - a minimum weight of 1 kg if "1 step" has been selected. - a minimum weight of 2 kg if "2 steps" has been selected. - a minimum weight of 5 kg if "5 steps" has been selected. - a minimum weight of 10 kg if "10 steps" has been selected. etc. Selection: 1, 2, 5, 10, 20, 50, 100, 200, 500, 1000 steps
Accuracy piece calculation	Define the resolution for calculating the reference weight. Selection: Display accuracy, +1 decimal place, +2 decimal places, With internal resolution
Piece weight optimization	Selection: Off, Automatic
Preset reference quantity	Selection: 5, 10, 20, 50, 100
Scale for reference weight	Selection: Do not change, Weighing point A...D
Default	Settings are reset to factory settings.
Save	The settings are saved.

4.3.5.2 Check weighing

Check weighing	
Control range	Define the control range of the weight value. Selection: 30 % ... 170 % , 10 % ... max. weight
Type of control value input	Selection: Set point value, min. value, max. value; set point value, min. % value, max. % value
Automatic printout of results	Selection: Off, On, Only print 'OK' values, Only print 'Not OK' values
LL/HH display	Selection: Off, On
Tare after printout of 'OK' result	Selection: Off, On
Default	Settings are reset to factory settings.
Save	The settings are saved.

4.3.5.3 Totalizing

Configuration	
Applications	Define parameters for counting, check weighing and totalizing.
Totalizing	You can save weight values in totalizing memory manually or automatically.
Totalizing	
Automatic value transfer	Selection: Off, On
Min. weight for auto. transfer	The minimum weight that must be placed on the weighing platform, for example, in order to save to totalizing memory. For a scale interval of, e.g. 1 kg, this results in <ul style="list-style-type: none"> - a minimum weight of 1 kg if "1 step" has been selected. - a minimum weight of 2 kg if "2 steps" has been selected. - a minimum weight of 5 kg if "5 steps" has been selected. - a minimum weight of 10 kg if "10 steps" has been selected. etc. Selection: 1, 2, 5, 10, 20, 50, 100, 200, 500, 1000 steps
Printout after value transfer	Selection: Off, Individual printout
Default	Settings are reset to factory settings.
Save	The settings are saved.

4.3.6 Parameters

Configuration	
Parameters	Define the parameters for the applications.
Parameters	
Basic application	Selection: Counting, Check weighing
Check weighing active	Check the <input checked="" type="checkbox"/> box to activate check weighing for configuration and production.

– Totalizing active	Check the <input checked="" type="checkbox"/> box to activate the totalizing memory.
– Static sum display	Check the <input checked="" type="checkbox"/> box to activate the number of previously weighed and counted products. This is an extra text display during counting.
– Auto. tare 1st weight	Check the <input checked="" type="checkbox"/> box to activate the function.
– Min. wgt. for auto. tar./prin.	The minimum weight that must be placed on the weighing platform, for example, in order to save to totalizing memory. For a scale interval of, e.g. 1 kg, this results in <ul style="list-style-type: none"> - a minimum weight of 1 kg if "1 step" has been selected. - a minimum weight of 2 kg if "2 steps" has been selected. - a minimum weight of 5 kg if "5 steps" has been selected. - a minimum weight of 10 kg if "10 steps" has been selected. etc. Selection: 1, 2, 5, 10, 20, 50, 100, 200, 500, 1000 steps
– Default	Settings are reset to factory settings.
– Save	The settings are saved.

4.3.7 Print parameters

Configuration	
– Print parameters	Configure the printout parameters.
– Printer selection	see Chapter 4.3.7.1
– Printer settings	see Chapter 4.3.7.2
– Print template	see Chapter 4.3.7.3

4.3.7.1 Printer selection

Configuration	
– Print parameters	Configure the printout parameters.

Printer selection	
– Ticket printer	This printer is used for report and label tickets. Selection: No printer, Printer, Printer 1, Printer 2 The printers are assigned to the device under [System setup] - [Connected devices]
– Additional printer	This printer is used for barcode printing, for example. Selection: No printer, Printer, Printer 1, Printer 2 The printers are assigned to the device under [System setup] - [Connected devices]
– Default	Settings are reset to factory settings.
– Save	The settings are saved.

4.3.7.2 Printer settings

Configuration └── Print parameters └── Printer settings	Configure the printout parameters.
Printer settings └── ID1...4 └── Header 1...2 └── Print once during standstill └── Default └── Save	<p>Enter up to four ID codes for identifying results on the printout. Input: max. 20 alphanumeric characters</p> <p>Enter up to two headers to identify the printout. Input: max. 20 alphanumeric characters</p> <p>Check the <input checked="" type="checkbox"/> box to activate the function.</p> <p>Settings are reset to factory settings.</p> <p>The settings are saved.</p>

4.3.7.3 Print template

Configuration └── Print parameters └── Print template	Configure the printout parameters.
Print template └── Printout type └── Number of printouts └── Use NLE └── Line 1...33 └── Default └── Save	<p>Selection: Individual printout, Component print, Total An individual printout is made by pressing the Print key. Component printout is only triggered when the "Automatic printout of results" option was activated under [Applications] - [Check weighing]. The Total option is always triggered when the M keys are pressed during the counting process. This is thus the intermediate result of the counting. Input: 1...99 Check the <input checked="" type="checkbox"/> box to activate printing with NiceLabelExpress. The following selection depends on the basic application selected under [Configuration] - [Parameters]. Selection: Blank, -----, Date/time, Time, Product, Product name, ID1...4, Product ID1...4, Header 1...2, Reference quantity, Reference weight, Set point quantity, Minimum, Min. quantity, Maximum, Max. quantity, Sequence number, Board number, Form feed, Net, Gross, Tare, Quantity (current), Set point (weight), Deviation in %, Deviation (as weight) Settings are reset to factory settings. The settings are saved.</p>

4.3.8 Printing

Configuration

— Printing

Print configuration.

5 Getting started

5.1 Safety instructions

⚠ WARNING

Warning of a hazard area.

- ▶ It is essential that the safety instructions in Chapter 2 of the PR 5900 Installation manual are read before installation and commissioning!

5.2 Switching on the device

The device can be set up as follows:

- Via keys on the front of the device
- Via an external PC keyboard
- Via a notebook/PC using the VNC software (included on the CD)

When the device is powered up, the following is shown on the display and/or notebook/PC:

Checking...	The device is booting up.
Booting...	
Restoring...	
PR 5900	<ul style="list-style-type: none">- The instrument type is displayed, PR 5900- BIOS version- Firmware version- Automatic display test- Weight display
No signal	Error message: no load cells are connected, see also PR 5900 operating instructions.
No values from scale	Error message: no communication with the xBPI scale, see also PR 5900 operating instructions. Error message: unable to read weight values from the ADC (analog-digital converter); see also PR 5900 operating instructions.
Scale not ready	Error message: no load cells or scale connected, see also PR 5900 operating instructions.

The weight display is shown.

Check the date and time after first turning on the device, see PR 5900 operating instructions.

5.3 User login

User management is **not** activated by default.

Activate user management with the menu item [System setup] - [User management], see also PR 5900 operating instructions.

The application rights "Administrator", "Supervisor" and "Operator" are preset and cannot be changed.

The application rights are defined as follows:

Access privilege	Operator	Supervisor	Administrator
Start application	x	x	x
Set ID1...4.	x	x	x
Set tare reset. The current tare value is stored in the tare memory.	x	x	x
Select memory.	x	x	x
Execute [M+]/[M-]/[MR].	x	x	x
Initialize "Counting."	x	x	x
Set reference sample weight [wRef].	x	x	x
Set reference quantity [nRef].	x	x	x
Re-initialize with n pieces	x	x	x
Set control parameters	x	x	
Create product	x	x	
Edit product	x	x	
Delete product	x	x	
Create tare memory	x	x	
Edit tare memory	x	x	

Access privilege	Operator	Supervisor	Administrator
Delete tare memory		X	X
Edit firmware settings			X

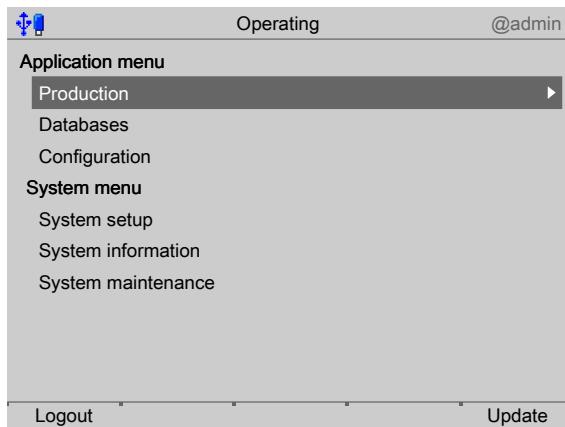

Note:

An authorized user must log in to start or configure the application.

1. Press the [Login] soft key.
2. Enter the password using the keyboard and confirm. If user management is not active, you only need to confirm.
▷ The operating menu is displayed.

The application and system menus are selected here.

3. Select and confirm the desired menu item using the cursor.

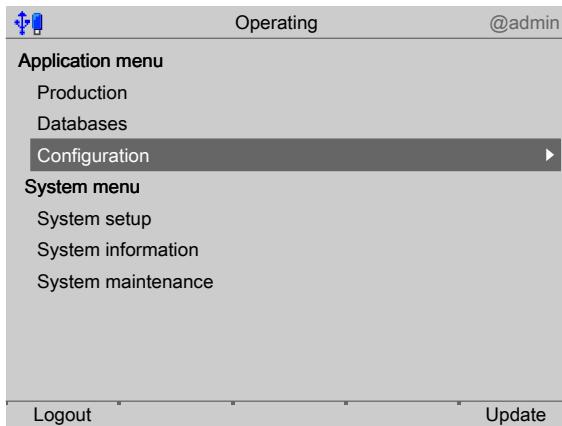

5.4 Configuration

5.4.1 General information

In this menu item, application is configured.

Note:

When user management is active, the configuration can only be performed if a user with application rights "Supervisor" or "Administrator" is logged in.

- Select and confirm [Configuration] using the cursor.

5.4.2 Configuring inputs

This function is required to configure the analog and digital inputs.

- Analog input, see Chapter [5.4.2.1](#)
- Digital inputs, see Chapter [5.4.2.2](#)
- I/O cards test, see Chapter PR 5900 operating instructions.

When changing the I/O card type, the configuration data remains unchanged. Functions for a non-installed scale can be selected, however, they are without effect.

The free and assigned SPM addresses are documented in Chapter [8](#).

If several inputs are assigned to an SPM address, the input with the higher number prevails.

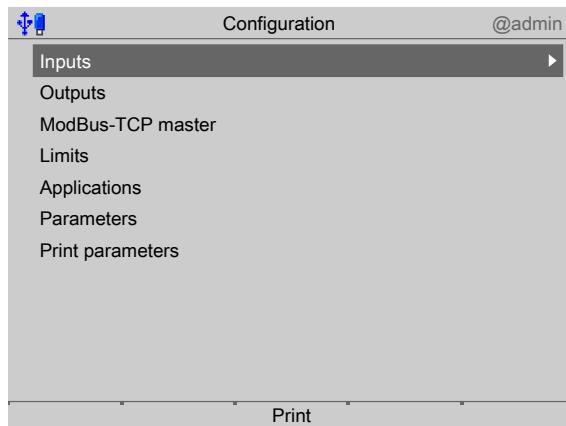

Option-1 = No. 1

Option-2 = No. 2

Built-in = No. 3

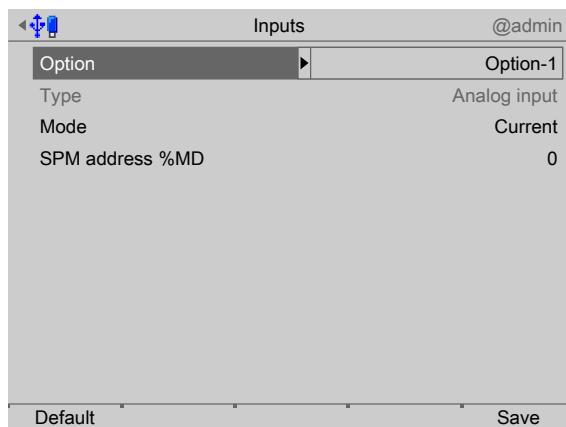

Unused inputs are ignored.

The card type and the available inputs and outputs are detected automatically.

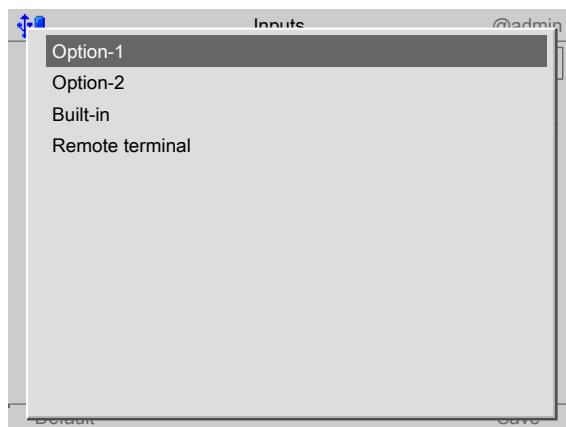

- In the operating menu, select and confirm [Configuration] - [Inputs].

5.4.2.1 Analog input

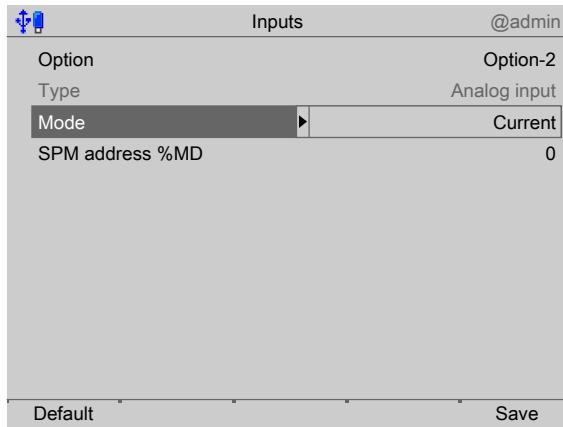

1. Select and confirm [Option] using the cursor.

► A selection window opens.

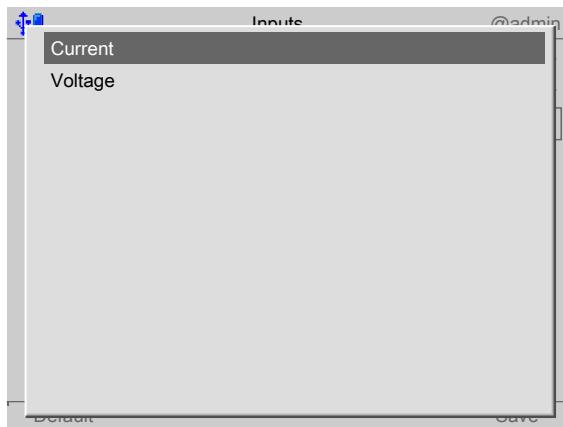

2. Select and confirm the corresponding interface using the cursor.

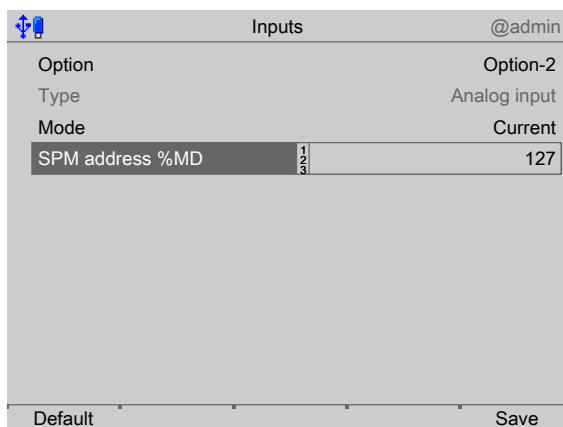

3. Select and confirm [Mode] using the cursor.

▷ A selection window opens.

4. Select and confirm the appropriate input type using the cursor (see also PR 5900 operating instructions).

5. Select [SPM address %MD] using the cursor.
6. Use the keyboard to enter and confirm a free address %MD (see Chapter 8).
7. Press the [Default] soft key to return to the factory settings, if required.
8. Press the [Save] soft key to save the settings.

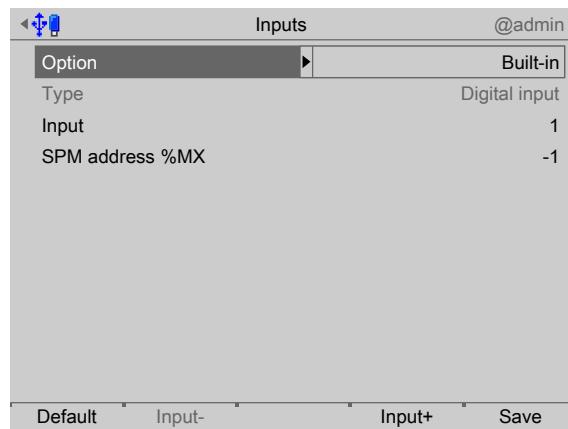

Note:

If the SPM address is equal to 0, the analog value is not written to the SPM.

General:

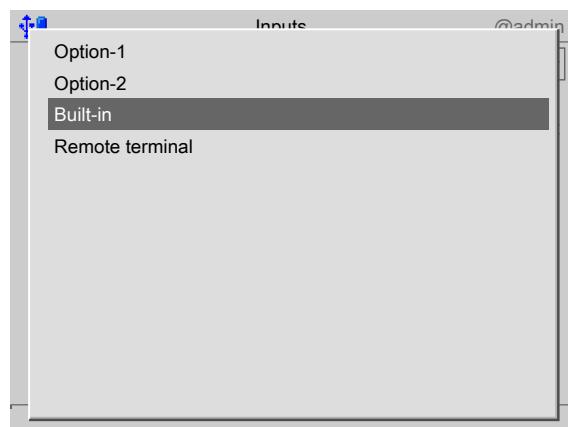

No reserved SPM addresses are overwritten by the analog inputs.

5.4.2.2 Digital inputs

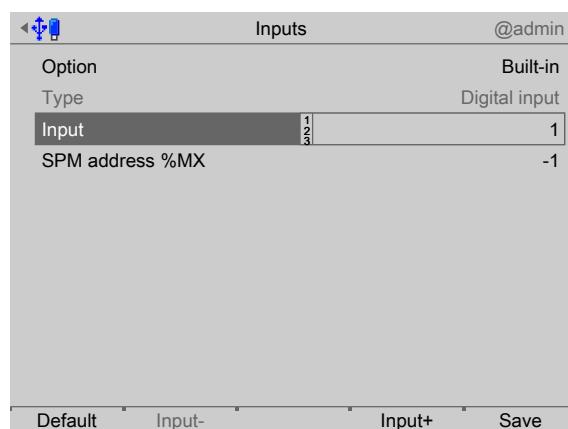

1. Select and confirm [Option] using the cursor.

▷ A selection window opens.

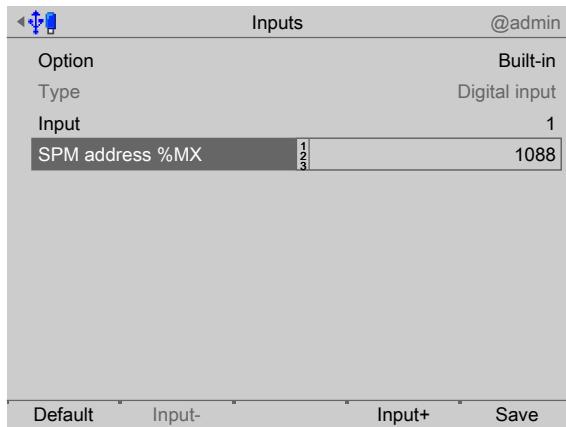

2. Select and confirm the corresponding interface using the cursor.

3. Select [Input] using the cursor.

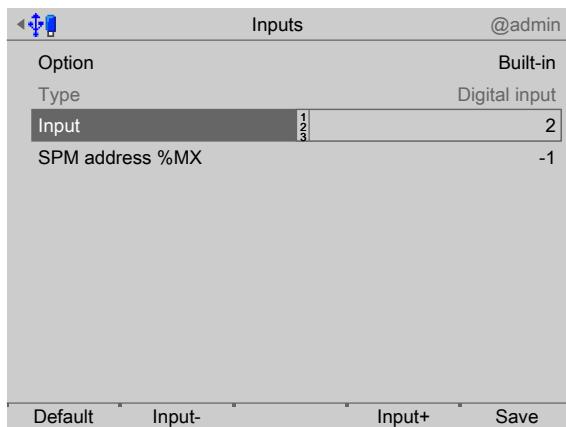

4. Confirm input "1".

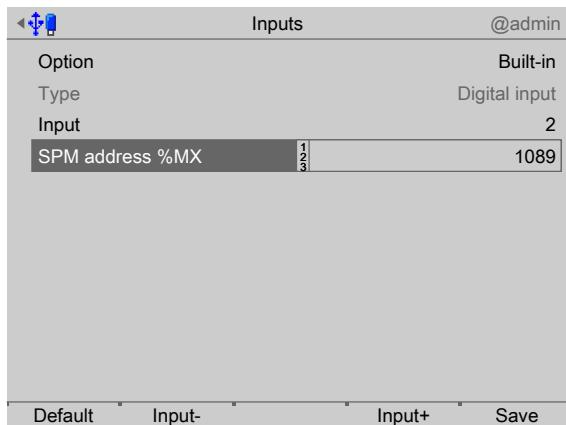

5. Select [SPM address %MX] using the cursor.
6. Use the keyboard to enter and confirm a free address %MX (see also PR 5900 operating instructions).

Note:

A negative address inverts the function.

7. Press the [Input+] soft key to configure the next input.

8. Select [SPM address %MX] using the cursor.

9. Use the keyboard to enter and confirm a free address %MX (see also PR 5900 operating instructions).
10. Configure inputs 3+4 in the same way.
11. Press the [Default] soft key to return to the factory settings, if required.
12. Finally, press the [Save] soft key to save the settings.

Note:

The value of the digital input is not written to the SPM if the address = 0 (inactive).

5.4.2.3 I/O cards test

See PR 5900 operating instructions.

5.4.3 Configuring outputs

This function is required to configure the analog and digital outputs.

- Analog output, see Chapter [5.4.3.1](#).
- Adapting the analog output, see PR 5900 operating instructions.
- Digital inputs, see Chapter [5.4.3.2](#).
- I/O cards test, see PR 5900 operating instructions.

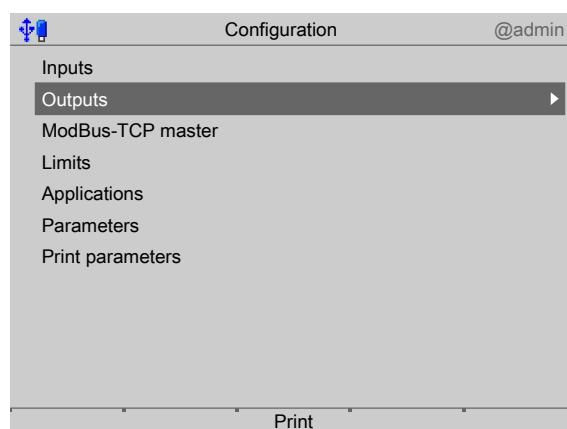

When changing the I/O card type, the configuration data remains unchanged. Functions for a non-installed scale can be selected, however, they are without effect.

The free and assigned SPM addresses are documented in Chapter [8](#).

The assignment of SPM addresses to a scale is only valid if the scale exists.

Non-allocated outputs are switched off.

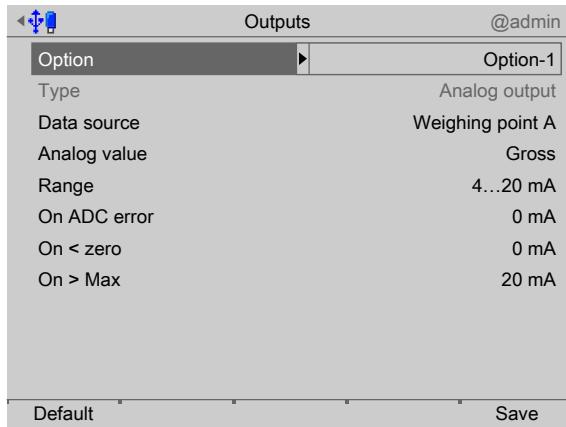

The card type and the available inputs and outputs are detected automatically.

- In the operating menu, select and confirm [Configuration] - [Outputs].

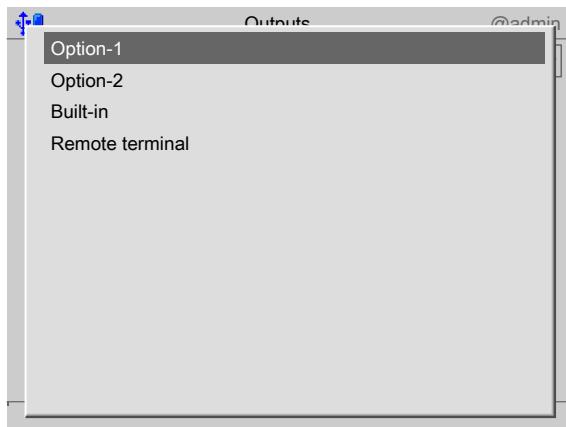

5.4.3.1 Analog output

The weight value of the selected weighing point is transmitted to the output.

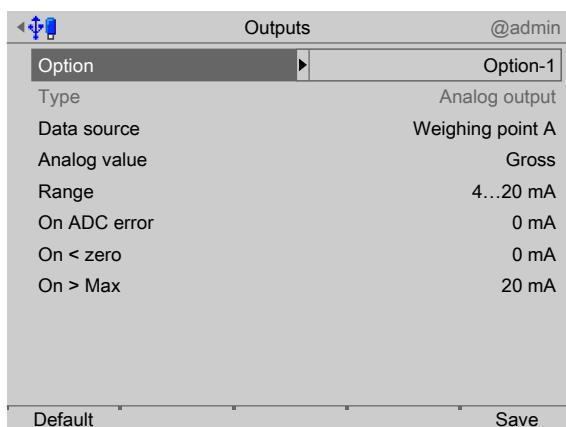

1. Select and confirm [Option] using the cursor.

▷ A selection window opens.

2. Select and confirm the corresponding interface using the cursor.

▷ The factory settings are displayed.

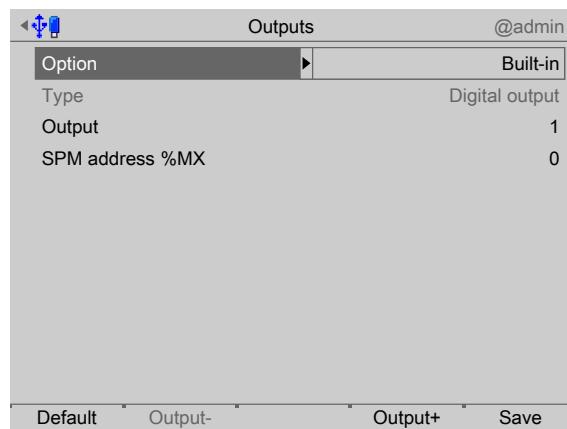

3. Configure the analog output in accordance with the table below.

4. Press the [Default] soft key to return to the factory settings, if required.
5. Press the [Save] soft key to save the settings.

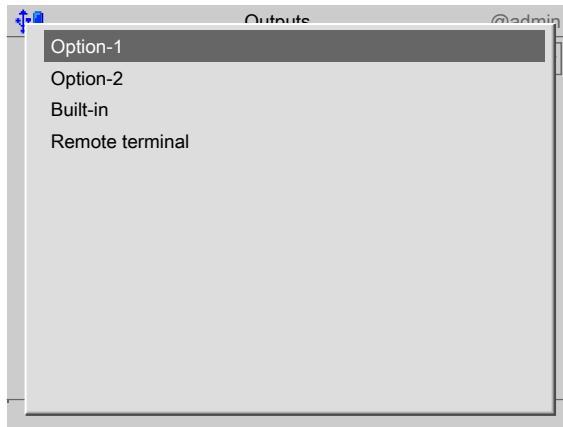

Analog output

Menu item	Selection	Description
[Data source]	Weighing point A...D	Output of the weight values from scales A, B, C or D. 0...Max are converted into 0/4 mA...20 mA.
[Analog value]	Gross	Output of the gross value
	Net/Gross	Output of the net value, if tared; otherwise gross
	Net/0 mA	Output of the net value, if tared; otherwise 0 mA
	Net/4 mA	Output of the net value, if tared; otherwise 4 mA
	Net/20 mA	Output of the net value, if tared; otherwise 20 mA
[Range]	0...20 mA	Output of 0...Max as 0...20 mA
	4...20 mA	Output of 0...Max as 4...20 mA
[On ADC error]	0 mA	Set output to 0 mA.
	4 mA	Set output to 4 mA.
	20 mA	Set output to 20 mA.
	hold	The last output value is held.
[On < zero]	0 mA	Set output to 0 mA.
	4 mA	Set output to 4 mA.
	20 mA	Set output to 20 mA.
	hold	The last output value is held.
	linear	Only for [4...20 mA]: Output goes below 4 mA until the limit is reached.
[On > Max]	0 mA	Set output to 0 mA.
	4 mA	Set output to 4 mA.
	20 mA	Set output to 20 mA.
	hold	The last output value is held.
	linear	Output goes below 20 mA until the limit is reached.

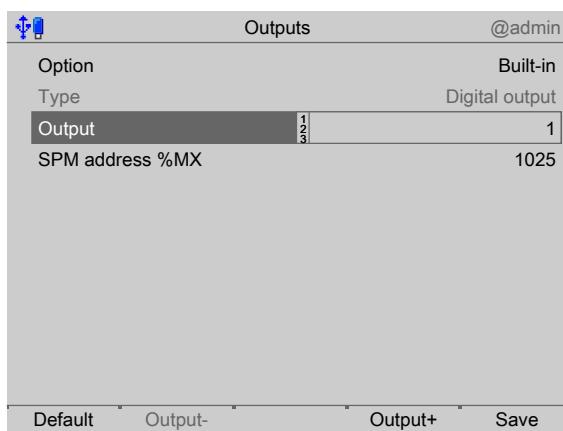

5.4.3.2 Digital outputs

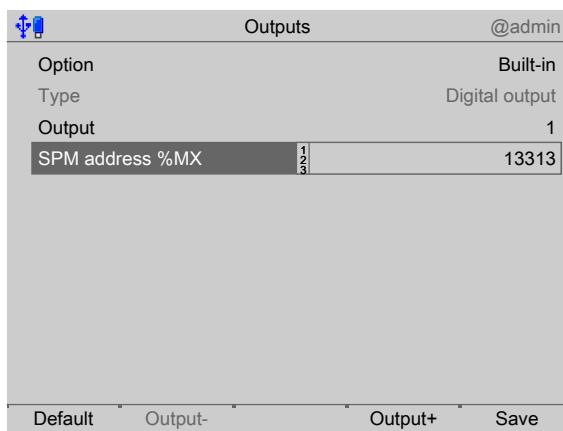

1. Select and confirm [Option] using the cursor.
 ▷ A selection window opens.

2. Select and confirm the corresponding interface using the cursor.

3. Select and confirm [Output] using the cursor.
4. Confirm output "1".

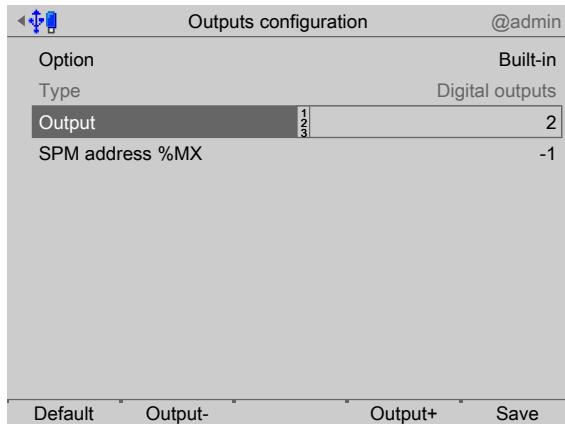

5. Select [SPM address %MX] using the cursor.
6. Using the keypad, enter and confirm a corresponding fixed or free address %MX (see also PR 5900 operating instructions) for the weighing point.

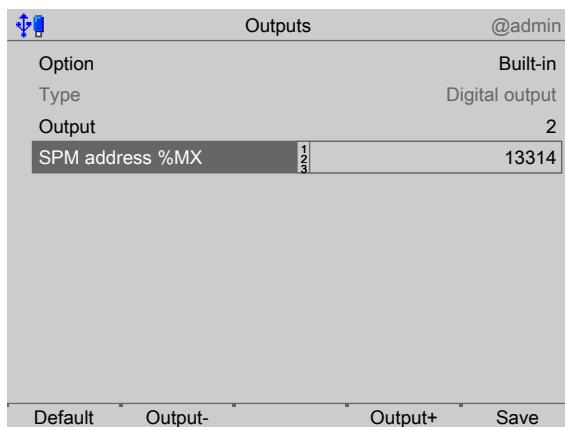

Note:

The SPM address %MX for an **unused** digital output = 0

A negative address inverts the function.

7. Press the [Output+] soft key to configure the next output.

8. Select [SPM address %MX] using the cursor.
9. Using the keypad, enter and confirm a corresponding fixed or free address %MX (see also PR 5900 operating instructions) for the weighing point.
10. Configure outputs 3+4 in the same way.
11. Press the [Default] soft key to return to the factory settings, if required.
12. Finally, press the [Save] soft key to save the settings.

5.4.3.3 I/O cards test

See PR 5900 operating instructions.

5.4.4 Configuring the ModBus TCP master

In this application, the ModBus master supports up to 8 predefined ModBus modules.

- For supported modules, see Chapter [5.4.4.1](#)
- Configuration tool, see Chapter [5.4.4.2](#)
- Device configuration, see Chapter [5.4.4.3](#)

In the operating menu, select and confirm [Configuration] - [ModBus-TCP master].

5.4.4.1 Supported modules

Modules 1 - 4

Modules 1-4 relate in each case to the following module:

Phoenix Contact Inline Block IO (ILB ETH 24 DI16 DIO16-2TX)

They each offer 16 digital inputs and 16 digital outputs.

Modules 5 - 6

Modules 5-6 relate in each case to the following modules:

- Phoenix Contact Inline module (IL ETH BK DI8 DO4 2-TX-PAC)
- Phoenix Contact output module (IB IL 24 DO16-PAC)
- Phoenix Contact output module (IB IL 24 DO16-PAC)

They offer a total of 8 digital inputs and 36 digital outputs.

Modules 7 - 8

Modules 7-8 relate in each case to the following modules:

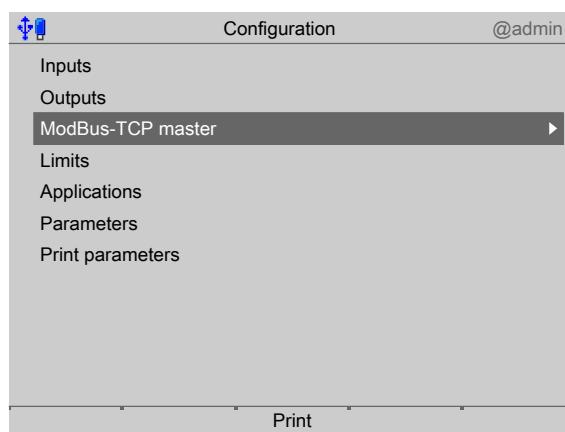

- Phoenix Contact Inline module (IL ETH BK DI8 DO4 2-TX-PAC)
- Phoenix Contact output module (IB IL 24 DO16-PAC)
- Phoenix Contact output module (IB IL 24 DO16-PAC)
- Phoenix Contact power supply (IB IL 24 PWR IN-PAC)
- Phoenix Contact output module (IB IL 24 DO16-PAC)

They offer a total of 8 digital inputs and a total of 52 digital outputs.

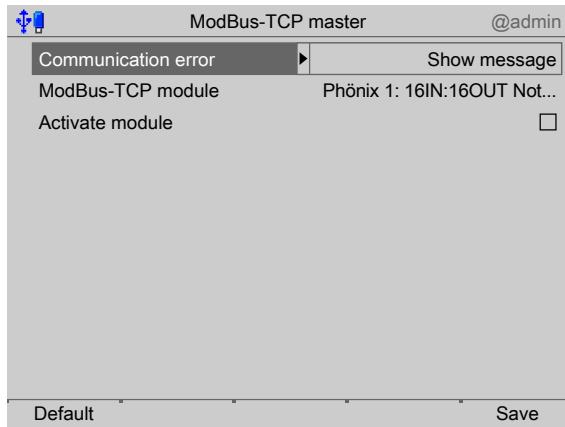

5.4.4.2 Configuration tool

The modules must be configured in terms of hardware according to the Phoenix instructions. In addition, an IP address must be assigned to each terminal. Phoenix provides the "IPAssign.exe" configuration tool for that purpose.

5.4.4.3 Configuration on the device

1. In the operating menu, select and confirm [Configuration] - [ModBus-TCP master].

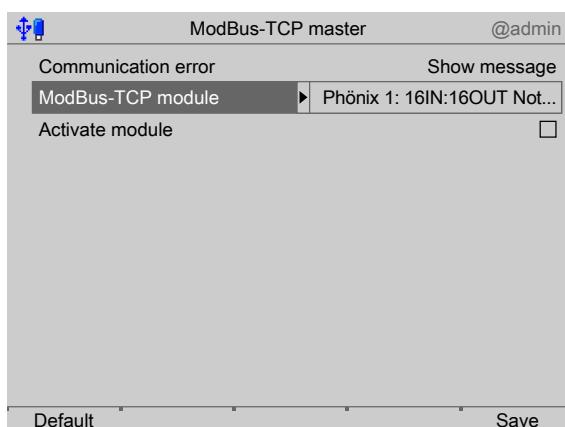

2. Select and confirm [Communication error].

▷ A selection window opens.

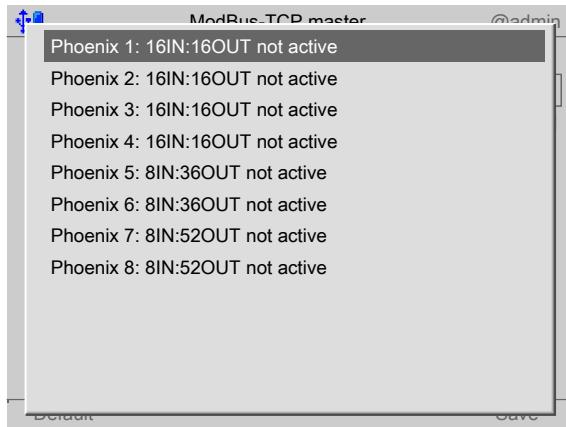

3. Select the appropriate function using the cursor (in this case, "Show message") and confirm.

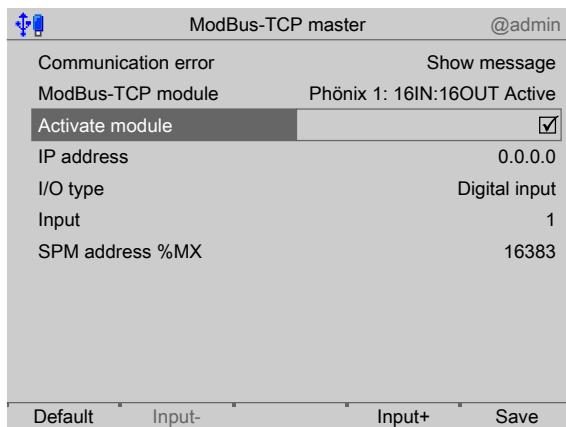

4. Select and confirm [ModBus-TCP Module] using the cursor .

▷ A selection window opens.

5. Select the appropriate function using the cursor (in this case, "Phoenix 1: ...") and confirm.

6. Check the box to activate the module.
7. Select and confirm the individual settings using the cursor.

[IP address]

Selection: speak with the responsible system administrator

[I/O type]

Selection: Digital input, Digital output

[Input/Output]

Selection: Input+/Output+ (higher), Input-/Output- (lower)

[SPM address %MX]

Set: Fixed SPM address, see Chapter 8.

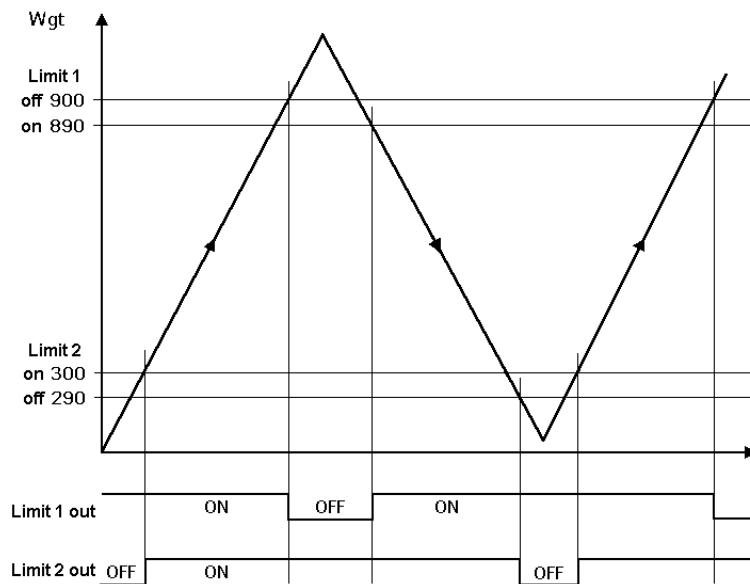

8. Press the [Default] soft key to return to the factory settings, if required.
9. Finally, press the [Save] soft key to save the settings.

5.4.5 Limit values: configuration

Each limit consists of a switch-on and a switch-off point for definition of a hysteresis.

The 3 pairs of values must be entered according to the same principle. The limit values always refer to the gross weight.

For the SPM addresses for the limits, see Chapter 8.

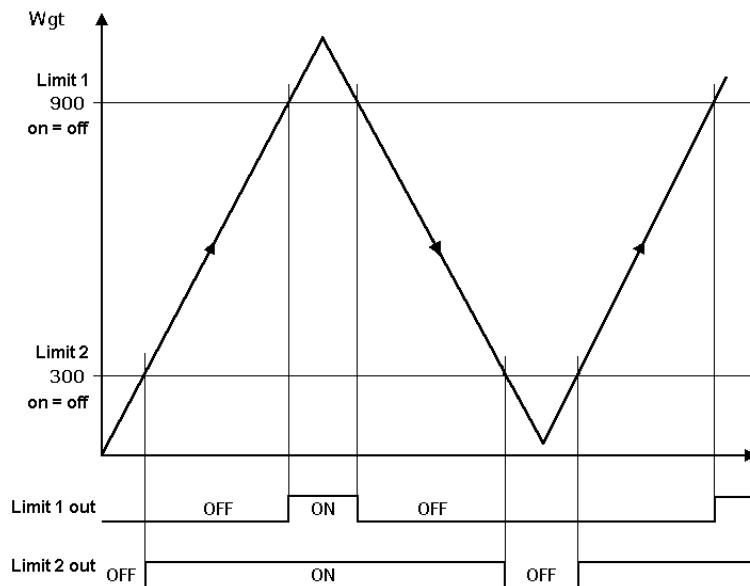

Example 1:

The output signal (Limit 1 out) of limit 1 switches OFF above a weight (Wgt) of 900 g.

The output signal (Limit 2 out) of Limit 2 switches OFF below 290 g.

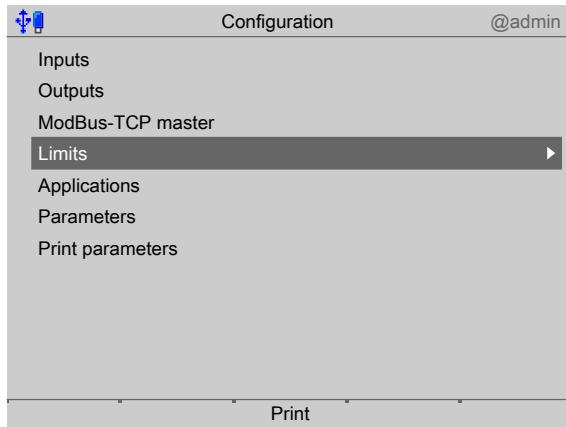

The two limit values have a hysteresis of 10 g.

In the event of a power failure both outputs turn to "off" ("OFF"), thus indicating underfill and overfill simultaneously.

Example 2:

If the Limits 1 and 2 are the same for "On" and "Off" (on = off),

- switches output 1 (Limit 1 out) ON if the weight (Wgt) exceeds the value.
- switches output 2 (Limit 2 out) OFF if the weight falls below the value.

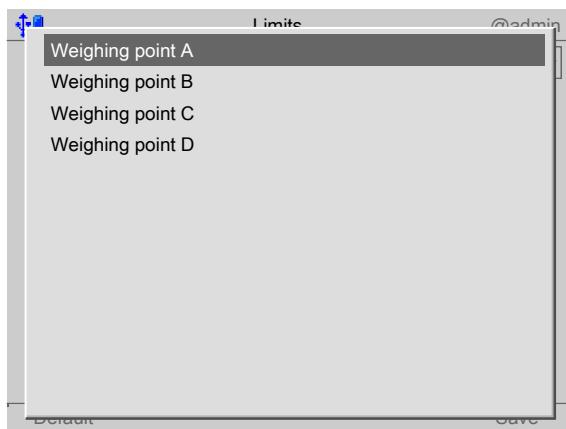

1. Select and confirm [Limits] using the cursor.

Select weighing point

Limits		@admin
Scale	▶	Weighing point A
Limit 1 on		890.0 g
Limit 1 off		900.0 g
Limit 2 on		300.0 g
Limit 2 off		290.0 g

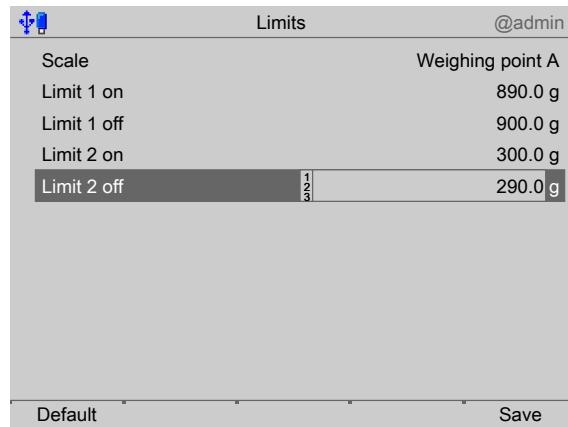

2. Select and confirm [Scale] using the cursor.

▷ A selection window opens.

3. Select and confirm the appropriate weighing point using the cursor.

Set limit values according to example 1

The screenshot shows a configuration menu titled 'Limits' for 'Weighing point A'. It lists four limit configurations:

	Scale	Weighing point A
Limit 1 on		890.0 g
Limit 1 off		900.0 g
Limit 2 on		300.0 g
Limit 2 off	<input type="text" value="1"/>	290.0 g

At the bottom are 'Default' and 'Save' soft keys.

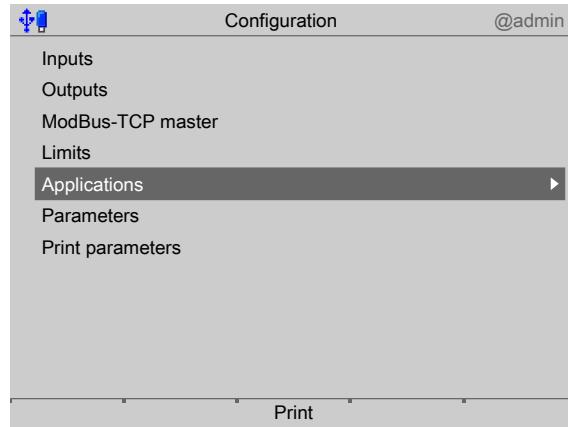

4. Using the cursor, select appropriate lines.
5. Use the keyboard to enter and confirm the desired values (in this case: see example 1).
6. Press the [Default] soft key to return to the factory settings, if required.
7. Finally, press the [Save] soft key to save the settings.

5.4.6 Applications

The following processes are configured in the application menu:

- Configuring the counting process, see Chapter [5.4.6.1](#)
- Configuring the check weighing process, see Chapter [5.4.6.2](#)
- Configuring the totalizing process, see Chapter [5.4.6.3](#)

The application menu is accessed via [Configuration].

The screenshot shows the 'Configuration' menu with the following options:

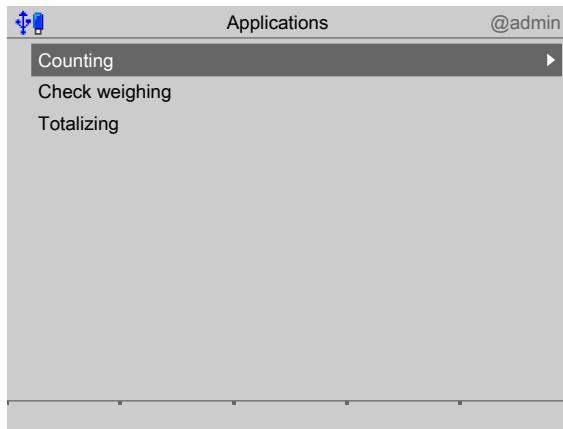

- Inputs
- Outputs
- ModBus-TCP master
- Limits
- Applications** (highlighted with a cursor)
- Parameters
- Print parameters

At the bottom are 'Print' and 'Save' soft keys.

- Select and confirm [Applications] using the cursor.

5.4.6.1 Configuring the counting process

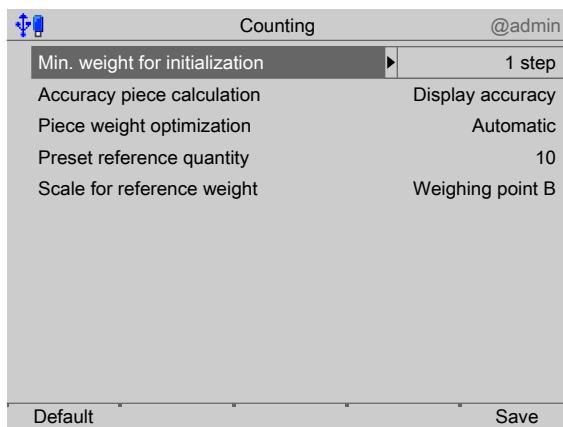

The configuration menu is accessed in the operating menu via [Configuration] - [Applications].

1. Select and confirm [Counting] using the cursor.

Note:

The [Counting] menu item is only displayed when "Counting" has been selected under [Configuration] - [Parameters] - [Basic application].

2. Select and confirm the individual parameters using the cursor.

[Min. weight for initialization]

Selection: 1, 2, 5, 10, 20, 50, 100, 200, 500, 1000 steps

For a scale interval of, e.g. 1 kg, this results in

- a minimum weight of 1 kg if "1 step" has been selected.
 - a minimum weight of 2 kg if "2 steps" has been selected.
 - a minimum weight of 5 kg if "5 steps" has been selected.
 - a minimum weight of 10 kg if "10 steps" has been selected.
- etc.

The minimum weight required for initialization of the weighing platform is configured in this menu.

Once the limit is exceeded by the load, the counting program can begin.

If the load on the platform is too light,

- then the following error message is displayed: "Weight too low."
- The weighing platform is not initialized.
- The preset reference quantity is not saved.

[Accuracy of piece weight calculation]

Selection: [Display accuracy], +1 decimal place, +2 decimal places, With internal resolution

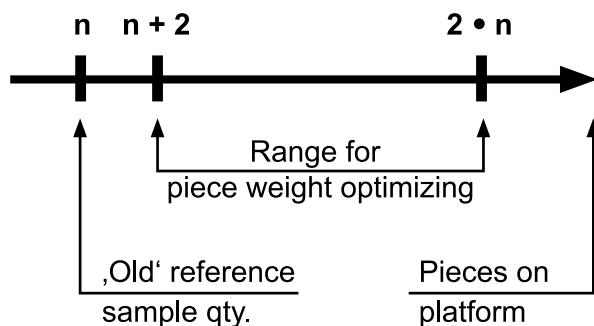

The resolution of the net value for calculating the reference weight is increased

- At "+1 decimal place" by one place (display accuracy times 10).
- At "+2 decimal places" by two places (display accuracy times 100).
- At "With internal resolution" to the maximum available internal resolution.

[Piece weight optimization]

Selection: Off, [Automatic]

Determines whether or not the piece weight is optimized automatically during the counting process.

To automatically carry out piece weight optimization, the following 6 criteria have to be fulfilled:

- Piece weight optimization must be set to "Automatic".
- The current quantity exceeds the original quantity by at least two.
- The new quantity may not exceed twice the original quantity (this limitation does not apply for the first optimization if the piece weight is entered using the keypad or a bar code reader).
- The new quantity must be <1000 pieces.
- The internally calculated quantity (such as 17.24 pcs) differs by less than ± 0.3 pcs from the nearest whole number (in this example: 17).
- The standstill criteria for the scale must be fulfilled. If an optimization is really being carried out, an "Optimizing" window is shown briefly in the display.

When optimization is complete, an "Optimized" window is displayed.

The note (opt) optimized weight value is displayed in the measured value line behind the weight value.

The new reference sample weight and reference quantity are saved.

[Preset reference quantity]

Selection: 5, [10], 20, 50, 100

The number of reference samples are configured in this menu item.

[Scale for reference weight]

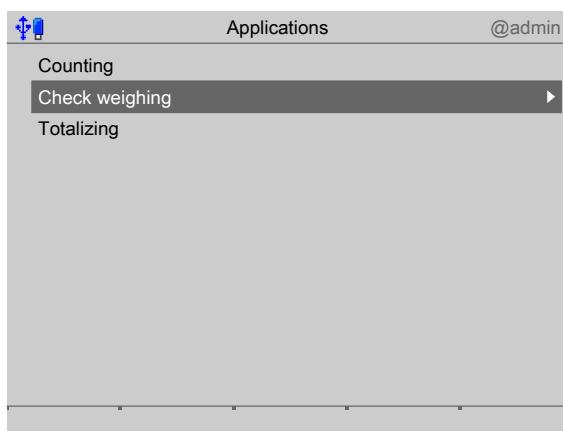

Selection: Do not change, Weighing point A...D

The reference scale is selected in this menu item.

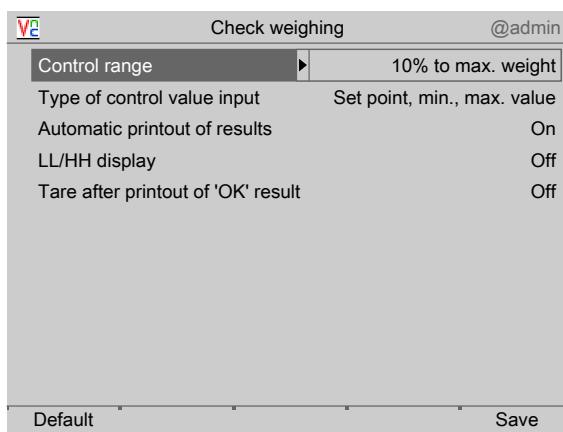

3. Finally, press the [Save] soft key to save the settings.

5.4.6.2 Configuring the check weighing process

The menu is accessed via [Configuration] - [Applications].

1. Select and confirm [Check weighing] using the cursor.

2. Select and confirm the individual parameters using the cursor.

[Control range]

Selection: 30 % to 170 %, 10 % to max. weight

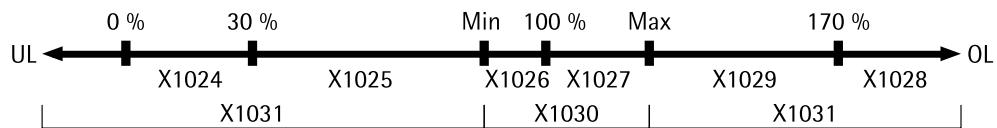

30 % to 170 %:

The control range is defined from 30 % to 170 % of the set point (100 %).

Note:

When selecting this range, the max. weighing capacity (scale end value) must be taken into account, i.e.: 170 % < FSD!

The figure shows an example with SPM addresses of WP A, see Chapter 8.

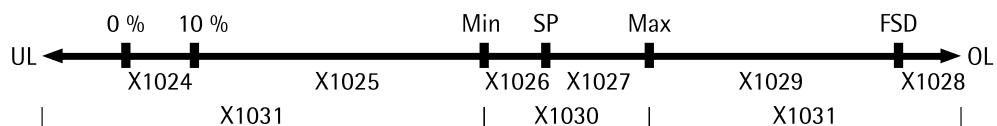

UL = unloaded; OL = overload; Min = minimum value; Max = maximum value

10 % to max. weight:

The control range is defined from 10 % to max. weight (scale end value FSD).

The figure shows an example with SPM addresses of WP A, see Chapter 8.

UL = unloaded; OL = overload; Min = minimum value; SP = set point; Max = maximum value; FSD = scale end value

[Type of control value input]

Selection: Set point, min., max. value; Set point, min., max. value in %

[Automatic printout of results]

Selection: Off, On, Only print 'OK' values, Only print 'Not OK' values

[LL/HH display]

Selection: Off, On

The weight value representation is shown in a display window: "LL" (too low) or "HH" (too high).

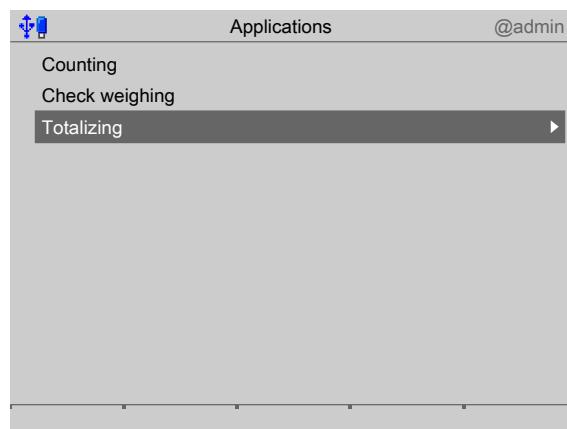

[Tare after printout of 'OK' result]

Selection: Off, On

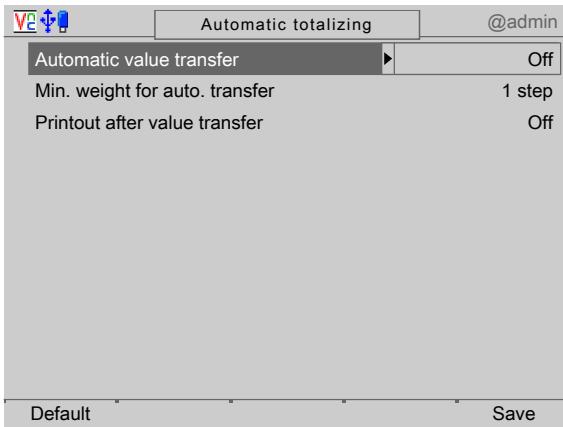

3. Finally, press the [Save] soft key to save the settings.

5.4.6.3 Configuring the totalizing process

The configuration menu is accessed via [Configuration] - [Applications].

1. Select and confirm [Totalizing] using the cursor.

2. Select and confirm the individual parameters using the cursor.

[Automatic value transfer]

Selection: Off, On

Save value manually by pressing the [M+] soft key. The value taken from the active platform (or the quantity) is added to the value already saved in totalizing memory and the transaction counter value is increased by one. When a value is added manually, the program does not check whether the platform has been unloaded since the last time the [M+] soft key was pressed.

Value saved automatically when the weighing platform is stable and the defined minimum load is exceeded. If the defined minimum load (or quantity) is not exceeded, you can save the item manually by pressing the [M+] soft key. Regardless of these settings, the current value cannot be saved automatically unless the platform is unloaded before the next sample is placed on it. The weighing platform is considered to be unloaded when the load is less than 50 % of the minimum load.

[Min. weight for auto. transfer]

Selection: 1, 2, 5, 10, 20, 50, 100, 200, 500, 1000 steps

The minimum weight that must be placed on the weighing platform, for example, in order to save to totalizing memory.

For a scale interval of, e.g. 1 kg, this results in

- a minimum weight of 1 kg if "1 step" has been selected.
- a minimum weight of 2 kg if "2 steps" has been selected.
- a minimum weight of 5 kg if "5 steps" has been selected.
- a minimum weight of 10 kg if "10 steps" has been selected.

etc.

[Printout after value transfer]

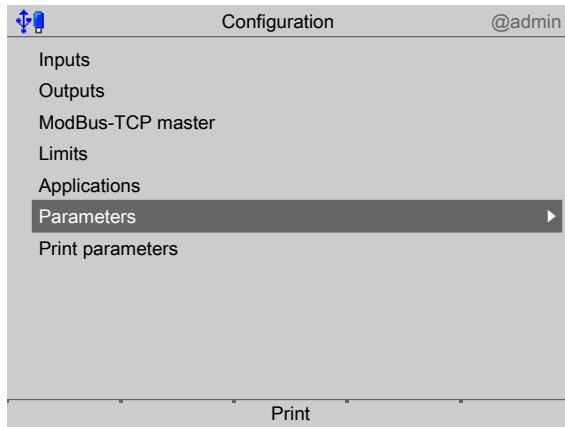

Selection: Off, Individual printout

The weight value representation is shown in a display window: "LL" (too low) or "HH" (too high).

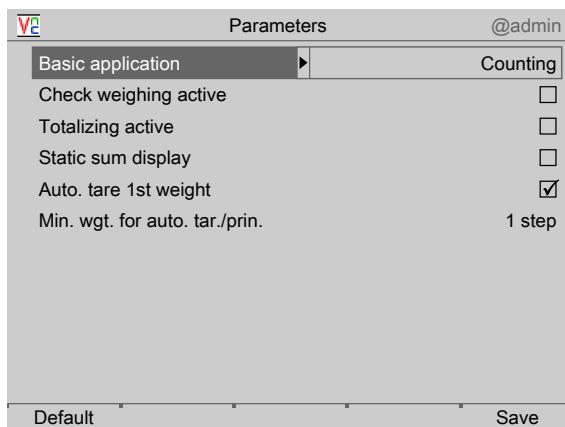

3. Finally, press the [Save] soft key to save the settings.

5.4.7 Parameters

The parameters valid for all applications are configured in this menu item.

1. Use the cursor to select and confirm [Parameters].
- ▷ A selection window opens.

2. Use the cursor to select and confirm the desired parameters.

[Basic application]

Selection: Counting, Check weighing

[Check weighing active]

If "Check weighing" was selected under basic application, then this parameter must be confirmed.

[Totalizing active]

This parameter must be confirmed to use totalizing.

[Static sum display]

This parameter controls the display during counting. When active, the totals (weight and piece) are displayed as text.

[Auto. tare 1st weight]

This parameter must be confirmed to use autotare.

Note:

This function is not supported by all scales.

[Min. wgt. for auto. tar./prin.]

Selection: 1, 2, 5, 10, 20, 50, 100, 200, 500, 1000 steps

The minimum weight that must be placed on the weighing platform, for example, in order to save to totalizing memory.

For a scale interval of, e.g. 1 kg, this results in

- a minimum weight of 1 kg if "1 step" has been selected.
- a minimum weight of 2 kg if "2 steps" has been selected.
- a minimum weight of 5 kg if "5 steps" has been selected.
- a minimum weight of 10 kg if "10 steps" has been selected.

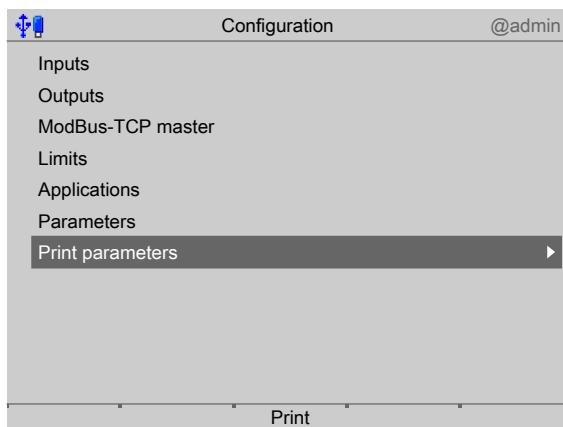

etc.

3. Press the [Default] softkey to return to the factory settings, if required.
4. Finally, press the [Save] softkey to save the settings.

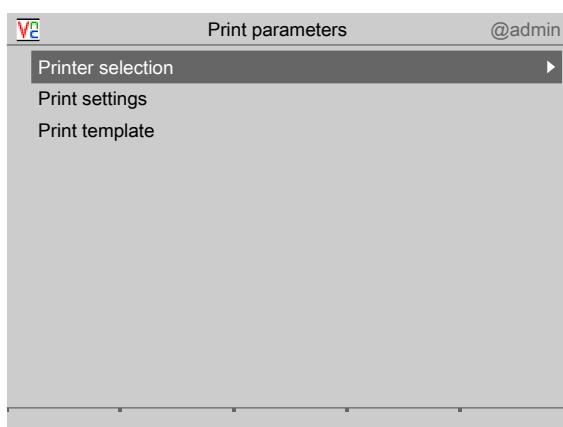

5.4.8 Print parameters

This menu item is used to configure printouts and assign corresponding printers.

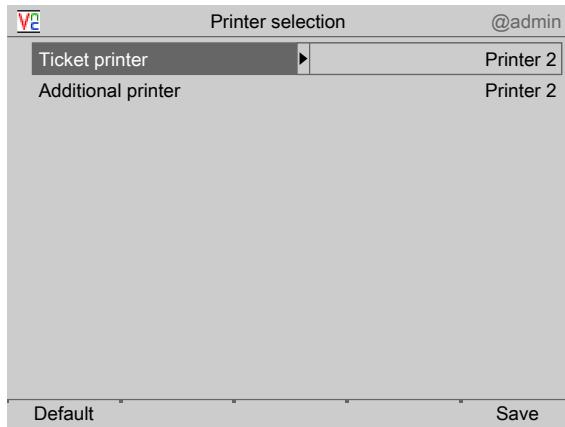

The configuration menu is accessed via [Configuration].

1. Select and confirm [Print parameters] using the cursor.

2. Select and confirm [Printer selection] using the cursor.

3. Select and confirm the appropriate printer.

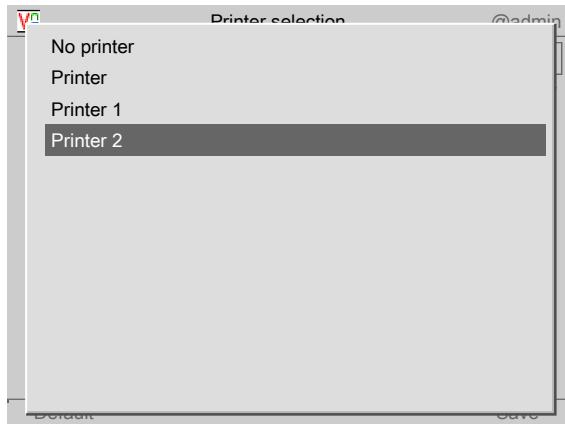

[Ticket printer]

This printer is used for printing all tickets and reports. The print width is limited to 80 characters per line.

[Additional printer]

All tickets and reports are printed on this printer, e.g. from a barcode printer. The print width is limited to 39 characters per line.

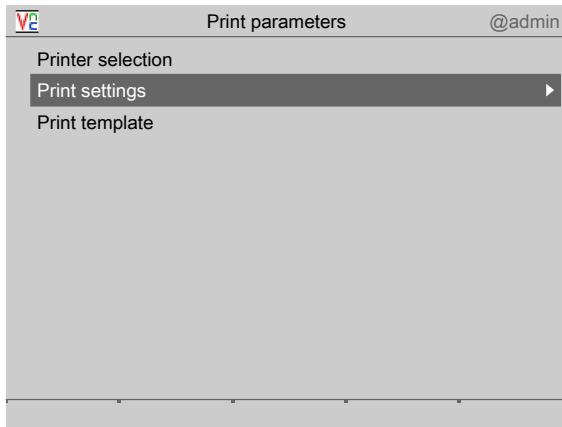

- ▷ A selection window opens.

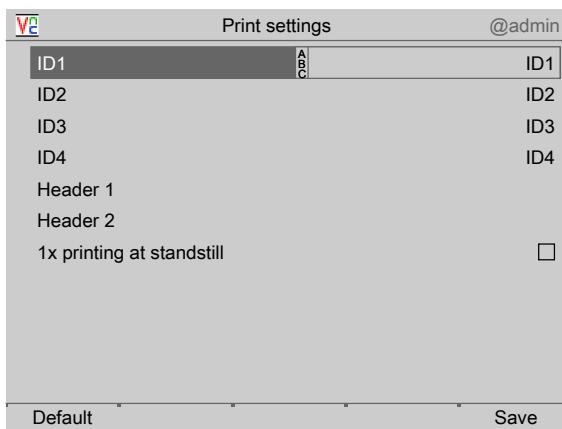

4. Select and confirm the appropriate printer.

This requires previous setup in the system menu under [System setup] - [Connected devices].

5. Finally, press the [Save] soft key to save the settings.

6. Select and confirm [Print settings] using the cursor.

7. Select and confirm the desired parameters using the cursor.

[ID1...4]

Enter up to four ID codes for identifying results on the printout.

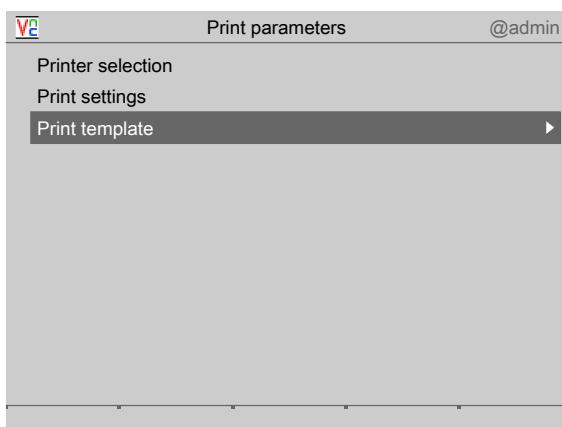

[Header 1...2]

Enter up to two headers to identify the printout.

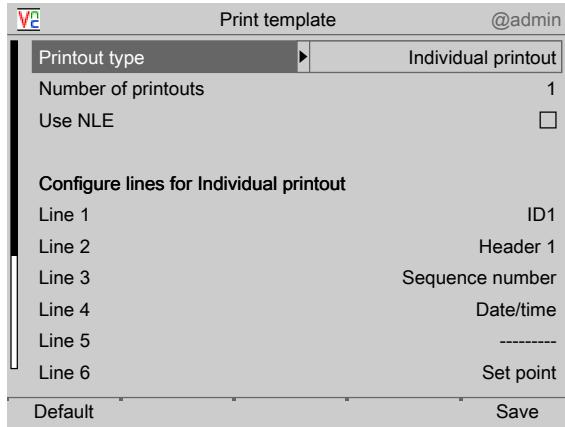

[Print once during standstill]

Check the box to activate the function.

8. Finally, press the [Save] soft key to save the settings.

9. Select and confirm [Print template] using the cursor.

10. Select and confirm the desired parameters using the cursor.

[Printout type]

Selection: Individual printout, Component print, Total

[Number of printouts]

Input: 1...99

[Use NLE]

Check the box to activate printing with NiceLabelExpress.

[Line 1...33]

The following selection depends on the basic application selected under [Configuration] - [Parameters].

Selection: Blank, -----, Date/time, Time, Product, Product name, ID1...4, Product ID1...4, Header 1...2, Reference quantity, Reference weight, Set point quantity, Minimum, Min. quantity, Maximum, Max. quantity, Sequence number, Board number, Form feed, Net, Gross, Tare, Quantity, Set point, Deviation in %, Deviation

11. Finally, press the [Save] soft key to save the settings.

5.5 Switching off the device

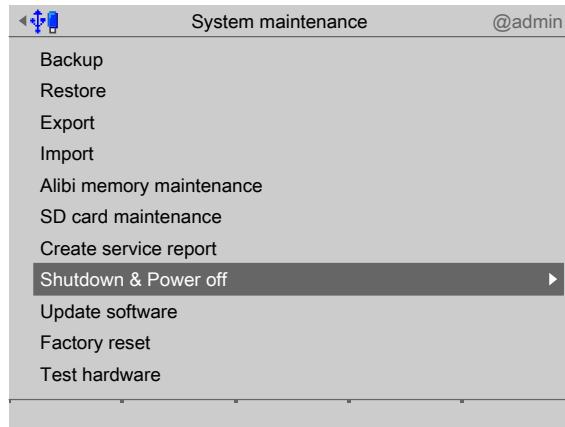

This function is required to disconnect the device from the power immediately, e.g., to install an option card. The rechargeable battery is immediately deactivated.

Note:

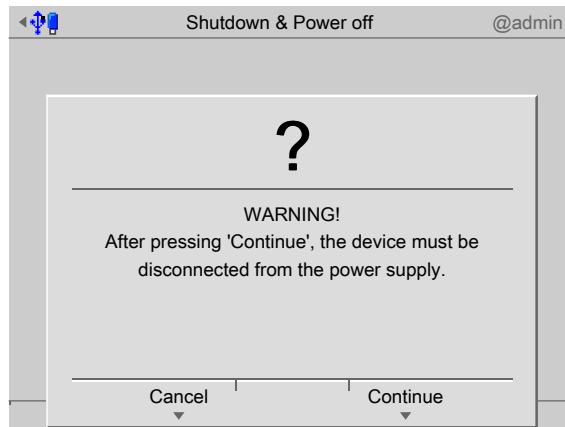

With a menu-driven shutdown, not all the content of the SD-RAM will be saved to a NAND flash memory.

When restarting, a cold start is forced. For example, database entries **no longer** exist.

It is recommended to first make a backup on the SD card and/or export the data to a USB stick; see Chapter PR 5900 operating instructions.

1. In the operating menu, select and confirm [System maintenance] - [Shutdown & Power off].
 - ▷ A prompt window opens.

2. Press the [Next] soft key.
3. Disconnect the power plug.

6 Production

6.1 Counting

6.1.1 Counting with one platform

Tasks

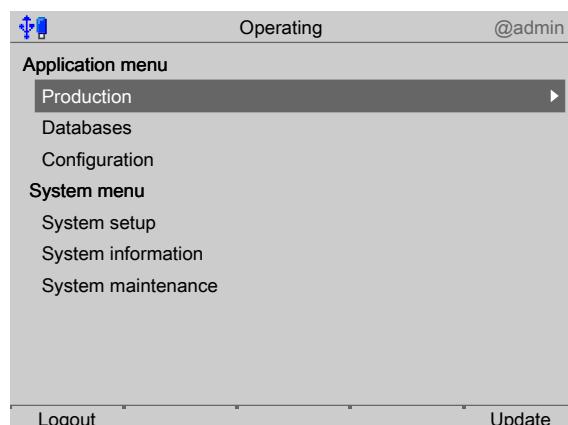

Determining the number of uncounted parts.

Automatic tare function is active, reference quantity = 10.

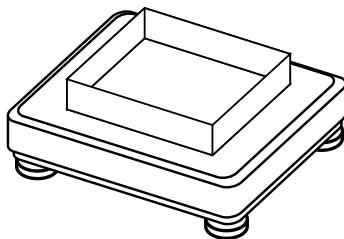

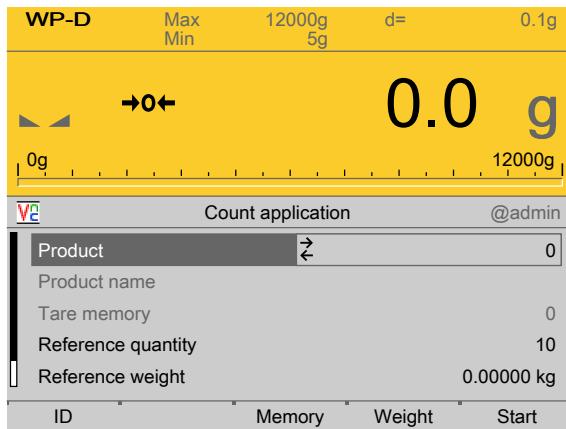

Default Settings

- Select "Counting" under [Configuration] - [Parameters] - [Basic application].
- Activate [Configuration] - [Parameters] - [Auto. tare 1st weight].
- In this example, select "10 steps" under [Configuration] - [Parameters] - [Min. wgt. for auto. tar./prin.].
- In this example, select "Printer 1" under [Configuration] - [Print parameters] - [Printer selection] - [Ticket printer].
- In this example, select "Individual printout" under [Configuration] - [Print parameters] - [Print template] with the corresponding line settings, see Chapter [5.4.8](#).
- For example, select "1 step" under [Configuration] - [Applications] - [Counting] - [Min. weight for initialization].
- Select "Display accuracy" under [Configuration] - [Applications] - [Counting] - [Accuracy of piece weight calculation].
- Select "Automatic" under [Configuration] - [Applications] - [Counting] - [Piece weight optimization].
- Enter "10" under [Configuration] - [Applications] - [Counting] - [Preset reference quantity].
- Select "Do not change" under [Configuration] - [Applications] - [Counting] - [Scale for reference weight].
- Press the [Save] soft key to save the settings.

Procedure

1. Select the [Production] line and confirm.
 - ▷ The product menu appears.

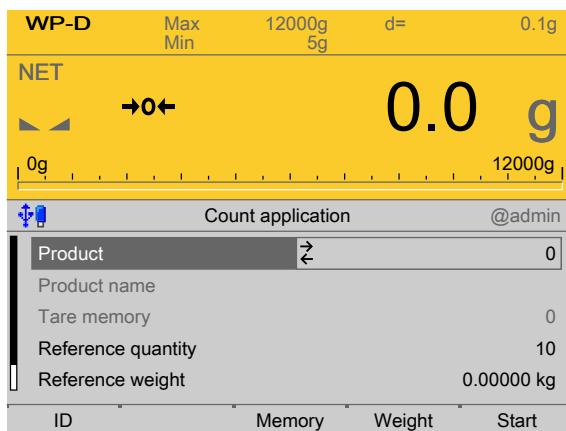

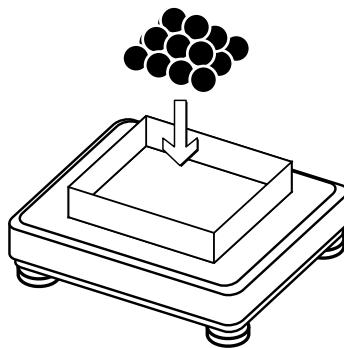

- Place an empty container on the scale.

Note:

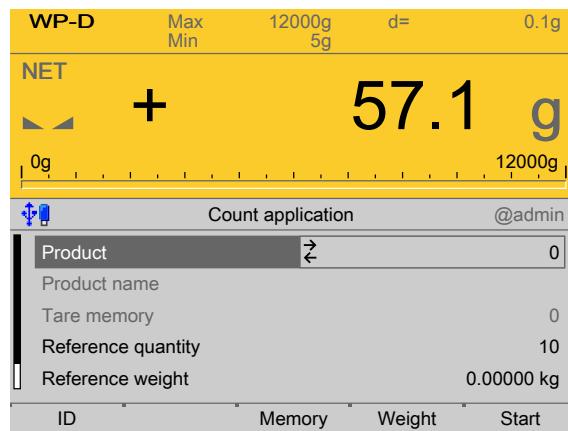

If the automatic tare function was not activated, then you must press the $\rightarrow T \leftarrow$ key to tare the scale.

- The weight display shows the "NET" value type.

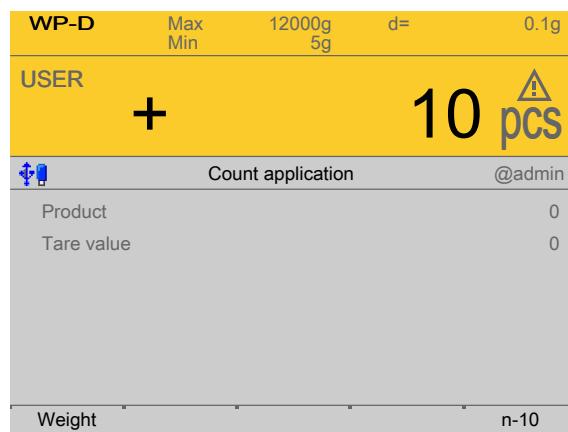

- Place the reference quantity (10 in this example) in the container.

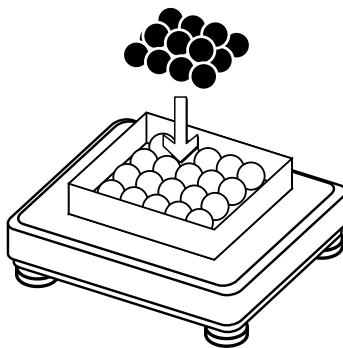

- Press the [Start] soft key to start the calculation.

▷ The quantity is shown on the display.

- If required, press the [Weight] soft key to switch to the weight display.

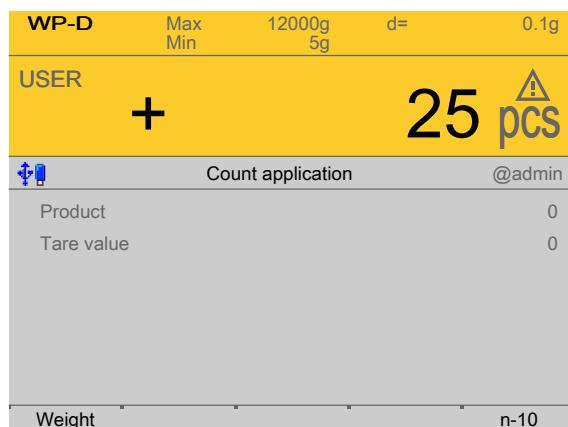

6. Place an unknown number of additional parts in the container.

▷ The quantity is shown on the display.

Note:

"Optimized" is displayed when automatic reference sample optimization has been carried out.

7. Press the key.

▷ The result is printed.

Test phase 1	
Sequence number	35
Date/time	23.02.2015-16:26:51
<hr/>	
Reference quantity	10 pcs
Reference weight	5.71 g
<hr/>	
Gross	221.5 g
Net	171.4 g
Tare database	50.1 g
Quantity	30
<hr/>	

8. Press the **EXIT** key to exit the current counting process.

9. Empty the scale.

6.1.2 Counting with two platforms

- Counting with two platforms of the same type, see Chapter [6.1.2.1](#)
- Counting with one reference platform and one weighing platform, see Chapter [6.1.2.2](#)

6.1.2.1 Counting with two platforms of the same type

Tasks

Determining the number of uncounted parts at weighing point B and D.

Automatic tare function is not active.

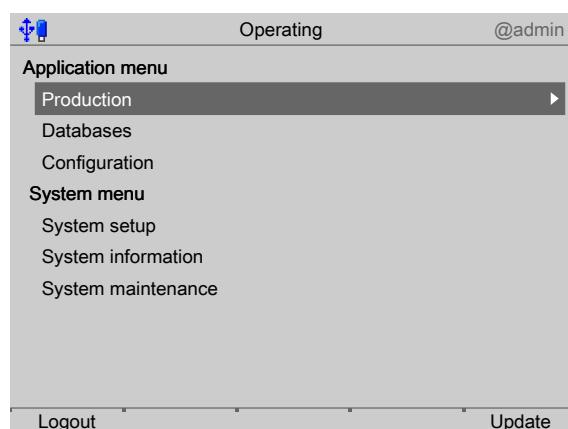

Reference quantity = 5 at weighing point B

Reference quantity = 10 at weighing point D

Default Settings

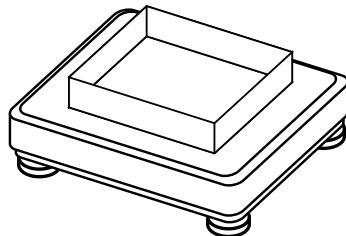

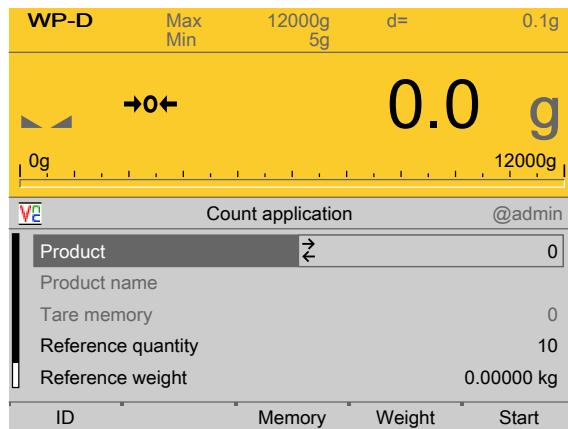

- Select "Counting" under [Configuration] - [Parameters] - [Basic application].
- Deactivate [Configuration] - [Parameters] - [Auto. tare 1st weight].
- In this example, select "10 steps" under [Configuration] - [Parameters] - [Min. wgt. for auto. tar./prin.].
- In this example, select "Printer 1" under [Configuration] - [Print parameters] - [Printer selection] - [Ticket printer].
- In this example, select "Individual printout" under [Configuration] - [Print parameters] - [Print template] with the corresponding line settings, see Chapter [5.4.8](#).
- For example, select "1 step" under [Configuration] - [Applications] - [Counting] - [Min. weight for initialization].
- Select "Display accuracy" under [Configuration] - [Applications] - [Counting] - [Accuracy of piece weight calculation].
- Select "Automatic" under [Configuration] - [Applications] - [Counting] - [Piece weight optimization].
- Enter "5" for weighing point B and "10" for weighing point D under [Configuration] - [Applications] - [Counting] - [Preset reference quantity].
- Select "Do not change" under [Configuration] - [Applications] - [Counting] - [Scale for reference weight].
- Press the [Save] soft key to save the settings.

Procedure

1. Select the [Production] line and confirm.

▷ The product menu appears.

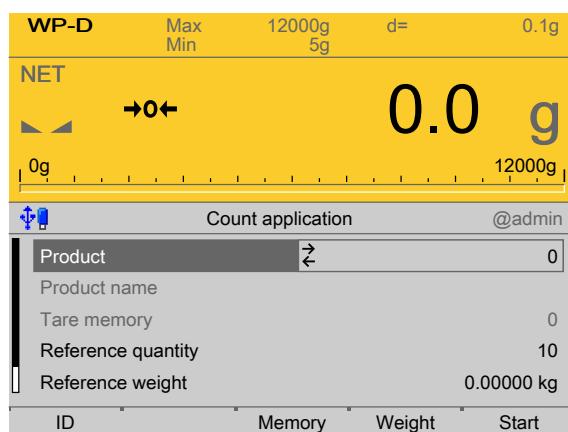

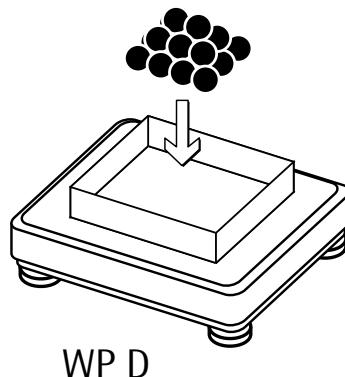

WP D

2. Place an empty container on the scale (WP D in this example).

3. Press the **→T←** key to tare the scale.

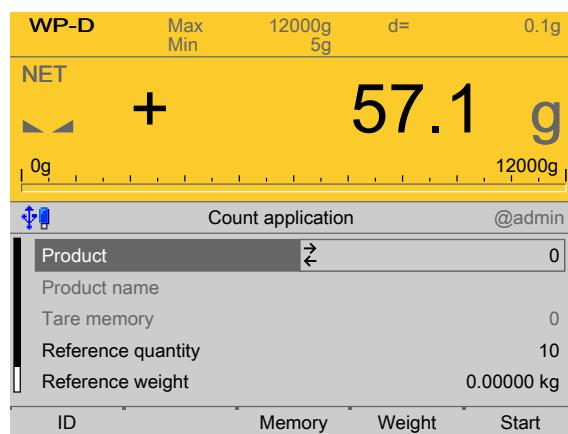

▷ The weight display shows the "NET" value type.

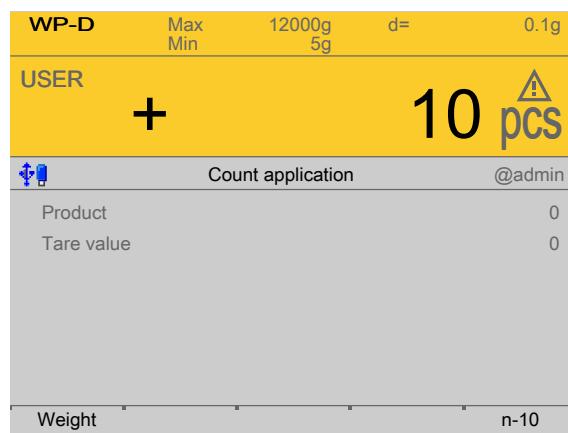

WP D

4. Place the reference quantity (10 in this example) in the container.

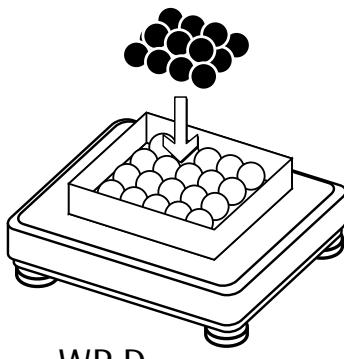

5. Press the [Start] soft key to start the calculation.

▷ The quantity is shown on the display.

6. If required, press the [Weight] soft key to switch to the weight display.

WP D

7. Place an unknown number of additional parts in the container.
 ▷ The quantity is shown on the display.

6.1.2.2 Counting with one reference platform and one weighing platform

Tasks

Determining the number of uncounted parts at weighing point D.

Reference scale at weighing point B

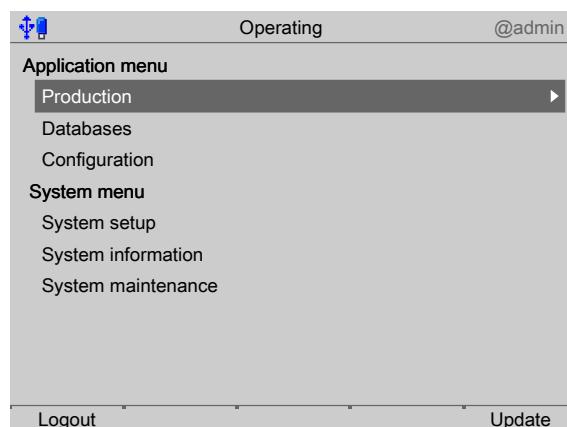

Automatic tare function is not active.

Reference quantity = 10 at weighing point B

Default Settings

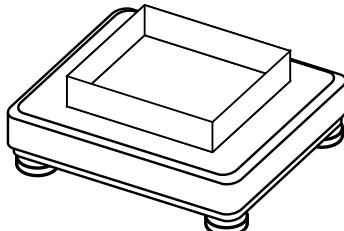

- Select "Counting" under [Configuration] - [Parameters] - [Basic application].
- Deactivate [Configuration] - [Parameters] - [Auto. tare 1st weight].
- In this example, select "10 steps" under [Configuration] - [Parameters] - [Min. wgt. for auto. tar./prin.].
- In this example, select "Printer 1" under [Configuration] - [Print parameters] - [Printer selection] - [Ticket printer].
- In this example, select "Individual printout" under [Configuration] - [Print parameters] - [Print template] with the corresponding line settings, see Chapter [5.4.8](#).
- For example, select "1 step" under [Configuration] - [Applications] - [Counting] - [Min. weight for initialization].
- Select "Display accuracy" under [Configuration] - [Applications] - [Counting] - [Accuracy of piece weight calculation].
- Select "Automatic" under [Configuration] - [Applications] - [Counting] - [Piece weight optimization].
- Enter "10" under [Configuration] - [Applications] - [Counting] - [Preset reference quantity].
- Select "Weighing point B" under [Configuration] - [Applications] - [Counting] - [Scale for reference weight].
- Press the [Save] soft key to save the settings.

Procedure

1. Select the [Production] line and confirm.

14. Press the **EXIT** key to exit the counting application.

6.2 Check weighing

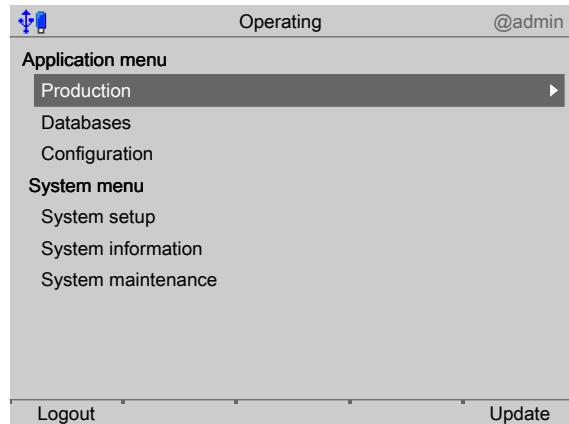

Tasks

Check weighing samples with a set point weight of 1.00 kg and a tolerance range from -10 g to +10 g.

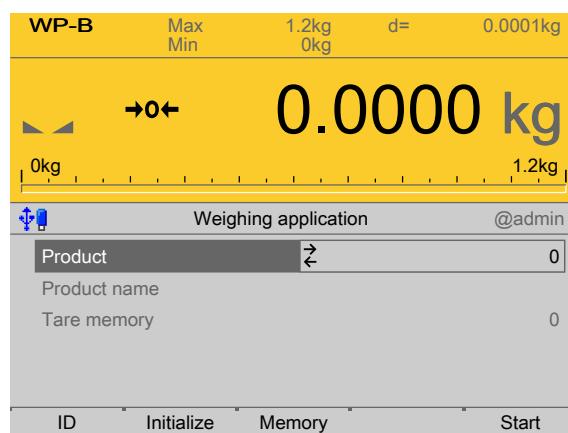

Default Settings

- Select "Check weighing" under [Configuration] - [Parameters] - [Basic application].
- Select "Check weighing active" under [Configuration] - [Parameters].
- In this example, select "10 steps" under [Configuration] - [Parameters] - [Min. wgt. for auto. tar./prin.].
- In this example, select "Printer 1" under [Configuration] - [Print parameters] - [Printer selection] - [Ticket printer].
- In this example, select "Individual printout" under [Configuration] - [Print parameters] - [Print template] with the corresponding line settings, see Chapter 5.4.8.
- Select "10 % to max. weight" under [Configuration] - [Applications] - [Check weighing] - [Control range].
- Select "Set point, min., max. value" under [Configuration] - [Applications] - [Check weighing] - [Type of control value input].
- Select "On" under [Configuration] - [Applications] - [Check weighing] - [Automatic printout of results].
- Select "Off" under [Configuration] - [Applications] - [Check weighing] - [LL/HH display].
- Select "Off" under [Configuration] - [Applications] - [Check weighing] - [Tare after printout of 'OK' result].
- Press the [Save] soft key to save the settings.
- Use the  key to select the corresponding weighing point (weighing point B in this example).

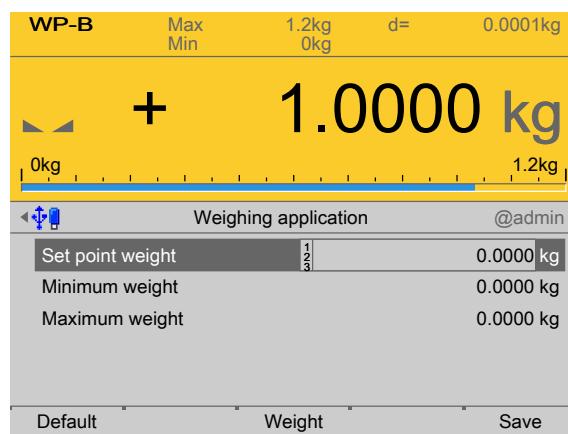

Procedure

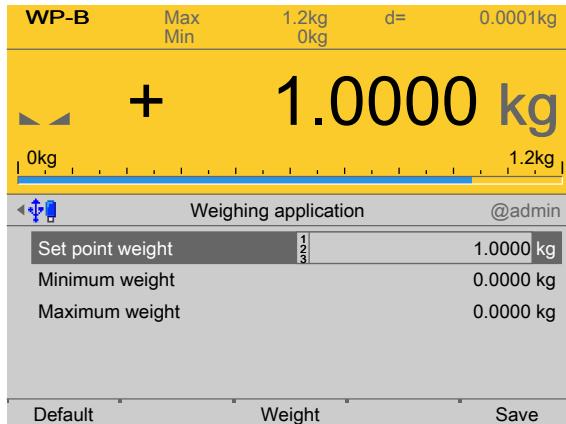

1. Select the [Production] line and confirm.

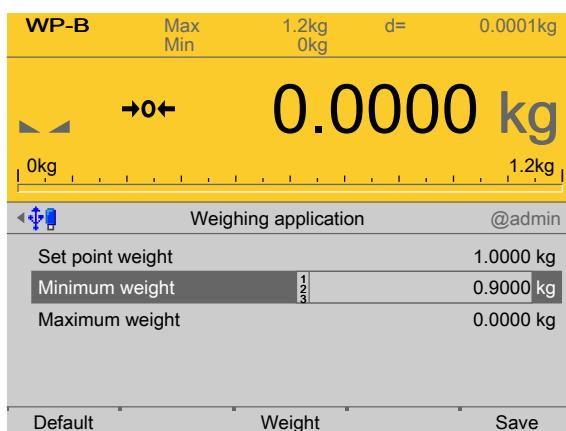

2. Press the $\rightarrow T \leftarrow$ key to tare the weighing point.
3. Press the [Initialize] soft key.

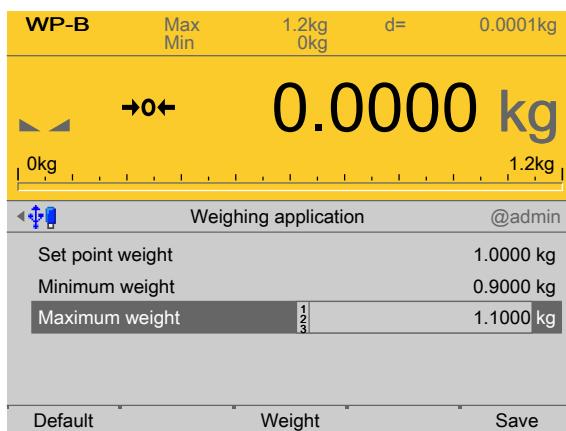

4. Place the set point on the scale (1.00 kg in this example).
5. Press the [Weight] soft key.
▷ The weight value is applied to the set point line.

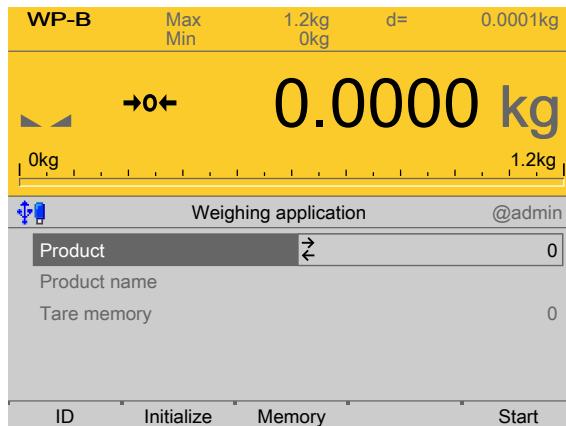

6. Remove the weight from the scale.

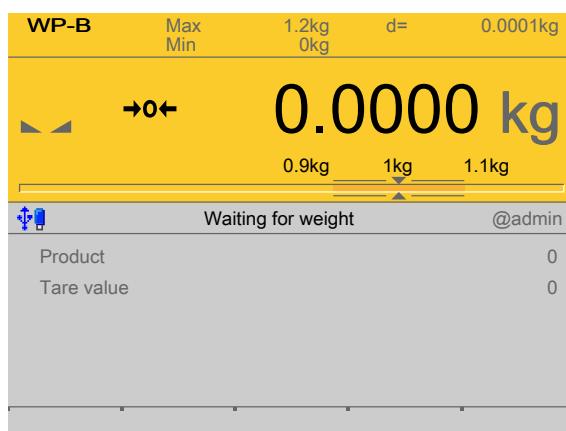

7. Select line 2 and enter the minimum weight of 0.9 kg via the keypad.
8. Press the **OK** key.

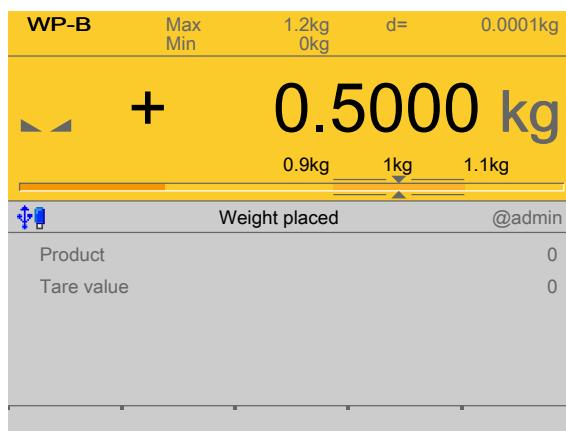

9. Select line 3 and enter the maximum weight of 1.1 kg via the keypad.
10. Press the **OK** key.
11. Press the [Save] soft key to save the entry.

12. Press the [Start] soft key.

13. Place the sample on the scale.

- ▷ The sample has a weight value of 0.5 kg; this means: < Minimum. The bar graph turns yellow.

The result is printed.

Sequence number	26
Date/time	14.01.2015-17:28:38
<hr/>	
Set point	1 kg
Min.	0.9 kg
Max.	1.1 kg
<hr/>	
Gross	0.5000 kg
Net	0.5000 kg

Deviation	-50 %
Deviation	-0.5 kg
<hr/>	

14. Remove the sample and place the next and read the results. Repeat this step as needed.
15. Press the **EXIT** key to exit weighing.

6.3 Totalizing

Tasks

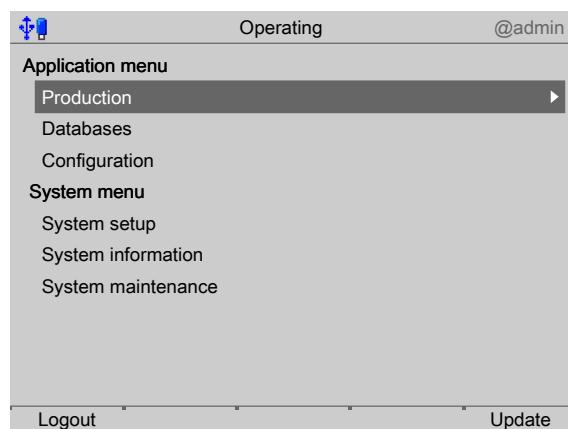

Totalizing weight values.

Automatic tare function is not active.

Default Settings

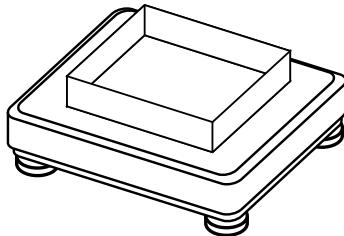

- Select "Counting" under [Configuration] - [Parameters] - [Basic application].
- Select [Configuration] - [Parameters] - [Totalizing active].
- Activate [Configuration] - [Parameters] - [Static sum display].
- Deactivate [Configuration] - [Parameters] - [Auto. tare 1st weight].
- In this example, select "10 steps" under [Configuration] - [Parameters] - [Min. wgt. for auto. tar./prin.].
- In this example, select "Printer 1" under [Configuration] - [Print parameters] - [Printer selection] - [Ticket printer].
- In this example, select "Individual printout" under [Configuration] - [Print parameters] - [Print template] with the corresponding line settings, see Chapter [5.4.8](#).
- Select "Off" under [Configuration] - [Applications] - [Totalizing] - [Automatic value transfer].
- Select "Individual printout" under [Configuration] - [Applications] - [Totalizing] - [Printout after value transfer].
- Press the [Save] soft key to save the settings.

Procedure

1. Select the [Production] line and confirm.
 - ▷ The product menu appears.

Product	0			
Tare value	0			
Weight total	1.1500 kg			
Total quantity	12			
wRef	0.1000 kg			
n=	2			
Piece	M+	MR	M-	n-10

10. Press the [M+] soft key to save the next weight value to the totalizing memory.

▷ The (n = 2) item is printed automatically.

Sequence number	252
Date/time	20.04.2015-11:05:16
<hr/>	
Net	0.1500 kg
Reference quantity	10 pcs
Reference weight	0.1 kg
Quantity	2
Item counter weight	2
Item counter pieces	2

WP-B	Max Min	1.2kg 0kg	d=	0.0001kg
NET + 0.1500 kg				
VC	Totals: *N 1.1500 kg *QNT 12 pcs		min 0 0 kg 12	
wRef	0.1000 kg			
n=	2			
Piece	M+	MR	M-	n-10

11. Press the [MR] soft key to end totalizing.

▷ An information window appears.

12. Press the key.

▷ The configured total data record is printed.

Sequence number	264
Date/time	20.04.2015-12:53:44

Net total	1.15kg
Total quantity	12 pcs
Reference quantity	10 pcs
Reference weight	0.1 kg
Item counter weight	2
Item counter pieces	2

\012	

13. Empty the scale.
14. Press the **EXIT** key to return to the production window.

7 Fieldbus interface

7.1 General notes

The interface is configured under [System settings] - [Fieldbus parameters].

There are two different access protocols.

Scale protocol

8 bytes for simple scale functions: Read weights and states.

The protocol and the functions of the firmware are described in the operating instructions PR 5900.

SPM protocol

This wider interface can be used to access all the data described in the SPM table.

The protocol and the functions of the firmware are described in the operating instructions PR 5900.

8 SPM

8.1 General information

The memory accessible to the user is the SPM (Scratch Pad Memory). This memory is used to store lots of internal data from which weights, statuses and reports can be read and control data can be written.

- System data are defined by the firmware and the respective application.
- The free user range can be used freely, for example, via the configuration of logical links.

The SPM table can be accessed via OPC and ModBus communication and fieldbus with SPM interface.

The SPM table can be accessed via OPC and ModBus communication.

In addition, individual bits are copied back and forth between digital inputs and outputs and the SPM via the I/O configuration.

Note:

If a text is defined e.g. from SPM address B401, this must be defined in the OPC server from SPM address B400 so that the content actually begins at B401.

8.2 Elementary data types

The elementary data types are characterized by their bit width and possible value range. All commands of the data type BOOL are executed with a rising edge.

Data type	Description	Value range
BOOL	bool	0 (FALSE) or 1 (TRUE)
SINT	short integer	-128 to 127
INT	integer	-32768 to 32767
DINT	double integer	-2 ³¹ to 2 ³¹ -1
LINT	long integer	-2 ⁶³ to 2 ⁶³ -1
USINT	unsigned short integer	0 to 255
UINT	unsigned integer	0 to 65535
UDINT	unsigned double integer	0 to 2 ³² -1
ULINT	unsigned long integer	0 to 2 ⁶⁴ -1
REAL	real number	±1.18E-38 bis 3.4E38 (with approx. 7 significant digits)
LREAL	long real number	±1.18E-308 bis 3.4E308 (with approx. 16 significant digits)
TIME	time duration	1 ms to ±2 ⁴⁷ ms
DATE	date (only)	1.1.1900 to 31.12.2099

Data type	Description	Value range
TIME_OF_DAY	time of day (only)	00:00:00.00 to 23:59:59.99
DATE_AND_TIME	Date and time of day	see DATE and TIME_OF_DAY
STRING	variable-long character string	max. 255 characters (ISO)
WSTRING	variable-long wide character string	max. 255 characters (Unicode)
BYTE	bit-sequence 8	...
WORD	bit-sequence 16	...
DWORD	bit-sequence 32	...
LWORD	bit-sequence 64	...

8.3 Addressing

The SPM table can be addressed via different counts. Bit addressing is used to count the individual bits (MX). Byte addressing is used to count individual bytes (MB), whereby, e.g. bits MX0...MX7 are identical to byte MBO.

Accordingly, addresses ML20, MD40-41, MW80-83, MB160-167 and MX1280-1343 contain the same data (see Chapter [8.11](#)).

Code	Data type	Address example
%ML	LWORD	L21
%MD	DINT	D42...43
%MW	WORD	W84...87
%MB	BYTE	B168...175
%MX	BOOL (bit)	X1344...1407

8.4 System data weighing point A

SPM address	Data type	R/W	Function
X0...X3	BOOL	R	Internal digital input 1...4
X8...11	BOOL	R	Internal digital output 1...4
X16...17	BOOL	R	Output limit 1...2

SPM address	Data type	R/W	Function
B4	BYTE	R	Indicator status
X32	BOOL	R	ADC error
X33	BOOL	R	> Max (FSD = Full Scale Deflection)
X34	BOOL	R	> Max + permitted range (OVL)
X35	BOOL	R	< zero
X36	BOOL	R	Zero $\pm\frac{1}{4}$ d
X37	BOOL	R	Within the zero set range (ZSR)
X38	BOOL	R	The weight is stable
X39	BOOL	R	Weight < zero or > Max (FSD = Full Scale Deflection)
B5	BYTE	R	ADC status
X40	BOOL	R	Measuring signal negative (error 7)
X41	BOOL	R	Measuring signal >36 mV (error 3)
X42	BOOL	R	Internal arithmetic error; CAL data are perhaps faulty (error 1)
X43	BOOL	R	No or too low sense voltage (error 6)
X44	BOOL	R	No communication with xBPI scale (error 9)
B6	BYTE	R	Command status
X48	BOOL	R	Command error
X49	BOOL	R	Command active
X50	BOOL	R	Network failure signal
B7	BYTE	R	Active status
X56	BOOL	R	Test mode active
X57	BOOL	R	Calibration active
X58	BOOL	R	Instrument is tared
X59	BOOL	R	Pendo only: parameter [Unbalanced check deviation]
X60	BOOL	R	Pendo only: operation with a simulated load cell
X112	BOOL	W	Zero device.
X113	BOOL	W	Tare device
X114	BOOL	W	Reset the tare of the device
X115	BOOL	W	Start the test mode
X116	BOOL	W	Finish the test mode
X117	BOOL	W	Reset the power fail signal
X118	BOOL	W	Set fixed tare weight D31 as tare
X119	BOOL	W	Store the current gross weight in the preset tare memory (D31)
X121	BOOL	W	Reset error B19 = 0.
B16	SINT	R	Exponent Number of decimal places Example: 1.23 is displayed Exponent: 2
B17	SINT	R	Weight unit 1 = mg, 2 = g, 3 = kg, 4 = t, 5 = lb, 9 = oz
B18	SINT	R	Verification interval (for multi-interval/multi-range = d1 or e1)
B19	BYTE	R	Last weighing point error, see PR 5900 operating instructions.

SPM address	Data type	R/W	Function
B20	BYTE	R	Higher byte of product code (0x59)
B21	BYTE	R	Lower byte of product code (0x00)
B22	BYTE	R	Major part of version number (1.0)
B23	BYTE	R	Minor part of version number (1.0)
B31	BYTE	R	ADC status
D6	UDINT	R	Serial number (board number)
W14	INT	R	Counter will be increased for every measured value.
D8	DINT	R	Current gross weight
D9	DINT	R	Current net weight
D10	DINT	R	Current tare weight
D14	DINT	R	Max weight (FSD = Full Scale Deflection)
D15	DINT	R	Min weight
D23	DINT	R	Activity counter, test of communication with device
D24	DINT	R	Limit 1 on
D25	DINT	R	Limit 1 off
D26	DINT	R	Limit 2 on
D27	DINT	R	Limit 2 off
D31	DINT	R/W	Preset tare memory (X118, X119)
B128 X1024	BYTE BOOL	R	Control status, see Chapter 5.4.6.2 Weight < lower limit: 0.1*set point OR Weight < 0.3*Set point: controlled via the parameter under [Configuration] - [Applications] - [Check weighing] - [Control range]
X1025	BOOL	R	Weight < min. value AND \geq lower limit
X1026	BOOL	R	Weight \geq min. value AND weight < set point
X1027	BOOL	R	Weight \geq set point \leq max. value
X1028	BOOL	R	Weight > max. value AND \geq upper limit
X1029	BOOL	R	Weight < upper limit: FSD (Full Scale Deflection) OR 1,7*Set point: controlled via the parameter under [Configuration] - [Applications] - [Check weighing] - [Control range]
X1030	BOOL	R	Weight within the tolerance range (green = good)
X1031	BOOL	R	Weight outside of the tolerance range (red = bad)

SPM address	Data type	R/W	Function
B129	BYTE		Control status and standstill
X1032	BOOL	R	X1024 AND standstill
X1033	BOOL	R	X1025 AND standstill
X1034	BOOL	R	X1026 AND standstill
X1035	BOOL	R	X1027 AND standstill
X1036	BOOL	R	X1028 AND standstill
X1037	BOOL	R	X1029 AND standstill
X1038	BOOL	R	X1030 AND standstill
X1039	BOOL	R	X1031 AND standstill
D34	DINT	R	Reference quantity
D35	DINT	R	Reference weight
D36	DINT	R	Current quantity
D37	DINT	R	Preset tare value
L19	LWORD	R	Weight total
L20	LWORD	R	Total quantity

Note:

Freely assignable SPM addresses D42...D49, see Chapter [8.11](#).

Note:

The system variables (e.g. ST_WGT_A) for communication via OPC are described in operating instructions PR 1792 (Chapter 4 + 5).

8.5 System data weighing point B

SPM address	Data type	R/W	Function
X4096...4099	BOOL	R	Internal digital input 1...4
X4104...4107	BOOL	R	Internal digital output 1...4
X4112...4113	BOOL	R	Output limit 1...2
B516	BYTE	R	Indicator status
X4128	BOOL	R	ADC error
X4129	BOOL	R	> Max (FSD = Full Scale Deflection)
X4130	BOOL	R	> Max + permitted range (OVL)
X4131	BOOL	R	< zero
X4132	BOOL	R	Zero $\pm \frac{1}{4}$ d
X4133	BOOL	R	Within the zero set range (ZSR)
X4134	BOOL	R	The weight is stable
X4135	BOOL	R	Weight < zero or > Max (FSD = Full Scale Deflection)

SPM address	Data type	R/W	Function
B517	BYTE	R	ADC status
X4136	BOOL	R	Measuring signal negative (error 7)
X4137	BOOL	R	Measuring signal >36 mV (error 3)
X4138	BOOL	R	Internal arithmetic error; CAL data are perhaps faulty (error 1)
X4139	BOOL	R	No or too low sense voltage (error 6)
X4140	BOOL	R	No communication with xBPI scale (error 9)
B518	BYTE	R	Command status
X4144	BOOL	R	Command error
X4145	BOOL	R	Command active
X4146	BOOL	R	Network failure signal
B519	BYTE	R	Active status
X4152	BOOL	R	Test mode active
X4153	BOOL	R	Calibration active
X4154	BOOL	R	Instrument is tared
X4155	BOOL	R	Pendo only: parameter [Unbalanced check deviation]
X4156	BOOL	R	Pendo only: operation with a simulated load cell
X4208	BOOL	W	Zero device.
X4209	BOOL	W	Tare device
X4210	BOOL	W	Reset the tare of the device
X4211	BOOL	W	Start the test mode
X4212	BOOL	W	Finish the test mode
X4213	BOOL	W	Reset the power fail signal
X4214	BOOL	W	Set fixed tare weight D159 as tare
X4215	BOOL	W	Store the current gross weight in the preset tare memory (D159)
X4217	BOOL	W	Reset error B531 = 0.
B528	SINT	R	Exponent Number of decimal places Example: 1.23 is displayed Exponent: 2
B529	SINT	R	Weight unit 1 = mg, 2 = g, 3 = kg, 4 = t, 5 = lb, 9 = oz
B530	SINT	R	Verification interval (for multi-interval/multi-range = d1 or e1)
B531	BYTE	R	Last weighing point error, see PR 5900 operating instructions.
B532	BYTE	R	Higher byte of product code (0x59)
B533	BYTE	R	Lower byte of product code (0x00)
B534	BYTE	R	Major part of version number (1.0)
B535	BYTE	R	Minor part of version number (1.0)
B543	BYTE	R	ADC status
D134	UDINT	R	Serial number (board number)

SPM address	Data type	R/W	Function
W270	INT	R	Counter will be increased for every measured value.
D136	DINT	R	Current gross weight
D137	DINT	R	Current net weight
D138	DINT	R	Current tare weight
D142	DINT	R	Max weight (FSD = Full Scale Deflection)
D143	DINT	R	Min weight
D151	DINT	R	Activity counter, test of communication with device
D152	DINT	R	Limit 1 on
D153	DINT	R	Limit 1 off
D154	DINT	R	Limit 2 on
D155	DINT	R	Limit 2 off
D159	DINT	R/W	Preset tare memory (X4214, X4215)
B640	BYTE		Control status, see Chapter 5.4.6.2
X5120	BOOL	R	Weight < lower limit: 0.1*Set point OR Weight < 0.3*Set point: controlled via the parameter under [Configuration] - [Applications] - [Check weighing] - [Control range]
X5121	BOOL	R	Weight < min. value AND \geq lower limit
X5122	BOOL	R	Weight \geq min. value AND weight < set point
X5123	BOOL	R	Weight \geq set point \leq max. value
X5124	BOOL	R	Weight > max. value AND \geq upper limit
X5125	BOOL	R	Weight < upper limit: FSD (Full Scale Deflection) OR 1,7*Set point: controlled via the parameter under [Configuration] - [Applications] - [Check weighing] - [Control range]
X5126	BOOL	R	Weight within the tolerance range (green = good)
X5127	BOOL	R	Weight outside of the tolerance range (red = bad)
B641	BYTE		Control status and standstill

D407	DINT	R	Activity counter, test of communication with device
D408	DINT	R	Limit 1 on
D409	DINT	R	Limit 1 off
D410	DINT	R	Limit 2 on
D411	DINT	R	Limit 2 off
D415	DINT	R/W	Preset tare memory (X12406, X12407)

SPM address	Data type	R/W	Function
B1664	BYTE		Control status, see Chapter 5.4.6.2
X13312	BOOL	R	Weight < lower limit: 0.1*Set point OR Weight < 0.3*Set point: controlled via the parameter under [Configuration] - [Applications] - [Check weighing] - [Control range]
X13313	BOOL	R	Weight < min. value AND \geq lower limit
X13314	BOOL	R	Weight \geq min. value AND weight < set point
X13315	BOOL	R	Weight \geq set point \leq max. value
X13316	BOOL	R	Weight > max. value AND \geq upper limit
X13317	BOOL	R	Weight < upper limit: FSD (Full Scale Deflection) OR 1,7*Set point: controlled via the parameter under [Configuration] - [Applications] - [Check weighing] - [Control range]
X13318	BOOL	R	Weight within the tolerance range (green = good)
X13319	BOOL	R	Weight outside of the tolerance range (red = bad)
B1665	BYTE		Control status and standstill
X13320	BOOL	R	X13312 AND standstill
X13321	BOOL	R	X13313 AND standstill
X13322	BOOL	R	X13314 AND standstill
X13323	BOOL	R	X13315 AND standstill
X13324	BOOL	R	X13316 AND standstill
X13325	BOOL	R	X13317 AND standstill
X13326	BOOL	R	X13318 AND standstill
X13327	BOOL	R	X13319 AND standstill
D418	DINT	R	Reference quantity
D419	DINT	R	Reference weight
D420	DINT	R	Current quantity
D421	DINT	R	Preset tare value
L211	LWORD	R	Weight total
L212	LWORD	R	Total quantity

Note:

Freely assignable SPM addresses D426...D433, see Chapter 8.11.

Note:

The system variables (e.g. ST_WGT_A) for communication via OPC are described in operating instructions PR 1792 (Chapter 4 + 5).

8.8 Digital and analog inputs and outputs

SPM address	Data type	R/W	Function
D512	DINT	R	Digital input 1 (option-1)
D513	DINT	R	Digital input 2 (option-2)
D514	DINT	R	Digital input 3 (built-in)
D516	DINT	R/W	Digital output 1 (option-1)
D517	DINT	R/W	Digital output 2 (option-2)
D518	DINT	R/W	Digital output 3 (built-in)
D520	DINT	R	Analog input 1 (option-1)
D521	DINT	R	Analog input 2 (option-2)
D523	DINT	R/W	Analog output 1 (option-1)
D524	DINT	R/W	Analog output 2 (option-2)

8.9 ModBus TCP modules

8.10 Common SPM addresses

SPM address	Data type	R/W	Function
B2560	BYTE	R	System status
X20480	BOOL	R	The application is ready.
X20482	BOOL	R	All batching processes have been stopped.
X20484	BOOL	R	A tolerance alarm was triggered at a weighing point.
X20487	BOOL	R	If a ModBus module is configured and the connection is disconnected, then the error bit is set.

9 Databases

9.1 General information

The Count application provides a database with several tables:

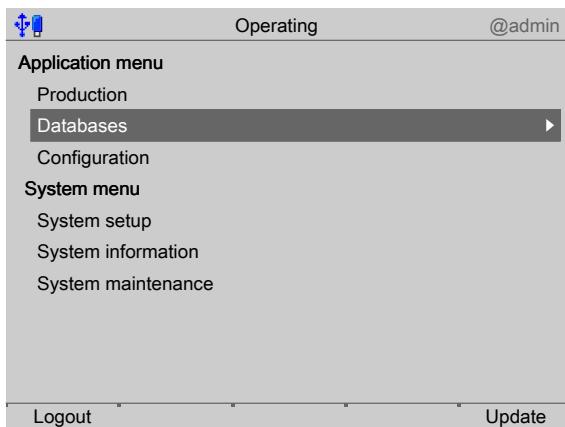

- Product table, see Chapter [9.2](#)
- Tare table, see Chapter [9.3](#)

Product entries and tare entries can be made here. If a product has been created, an available tare entry can be allocated to it. The program has a search function. For example, if the first letter of a stored product is entered, the corresponding memories are activated. The program continues to search as additional characters are entered (e.g., SCR for "screw"). Product/tare memory "0" is a working memory that is always available.

The master data of products can be expanded by so-called "identifiers." These are included on any printouts that are generated.

Note:

When user management is active, database entries can only be made if the "Supervisor" or "Administrator" is logged in.

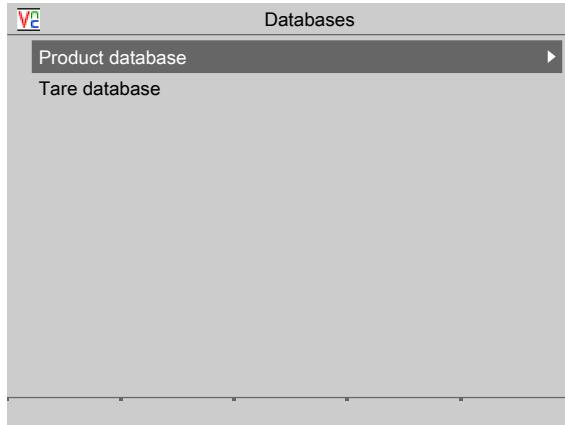

- Select and confirm [Databases] using the cursor.

9.2 Product database

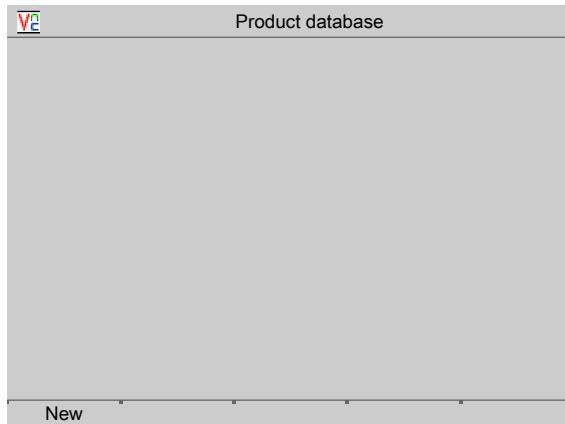

The database manages the products in the product table.

New entries can be added in the menu, available entries can be edited and deleted.

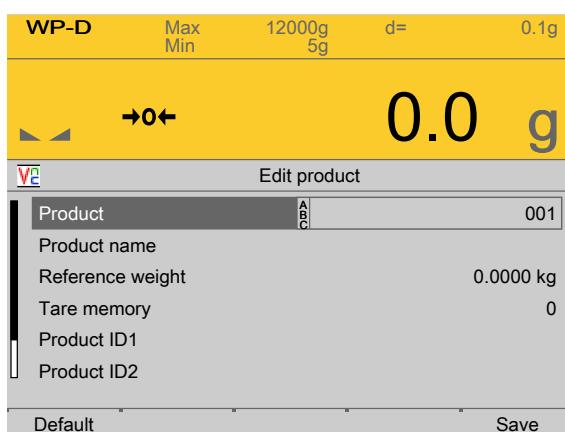

- Select and confirm [Product database] using the cursor.

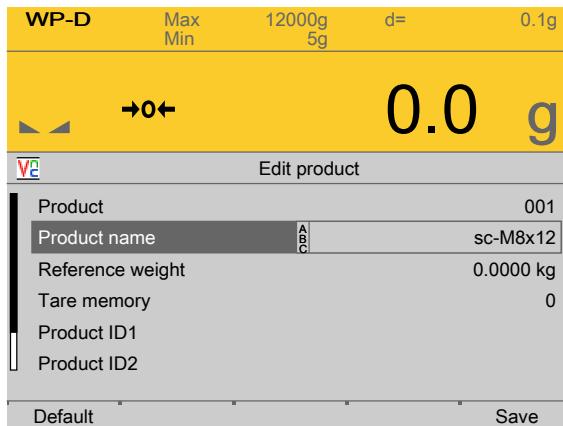

9.2.1 Create product

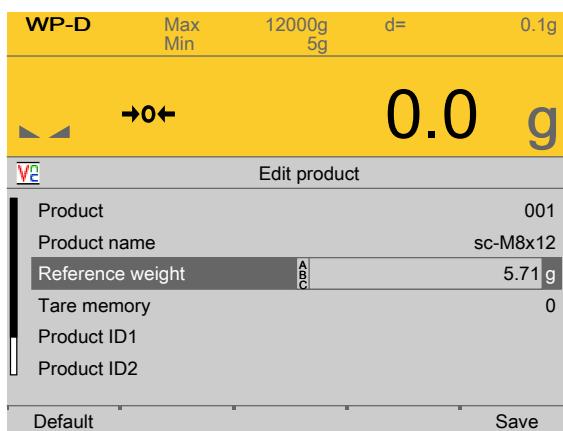

1. Press the [New] soft key to create a new product.

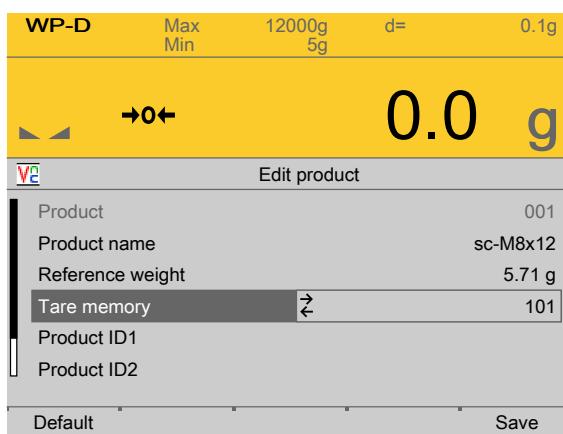

2. Confirm the first line with the ► cursor key.
3. Enter a short name using the keypad (max. 15 characters) and confirm with the **OK** button.

4. Select the second line using the cursor and confirm using the ► cursor key.
5. Enter a long name using the keypad (max. 20 characters) and confirm with the **OK** button.

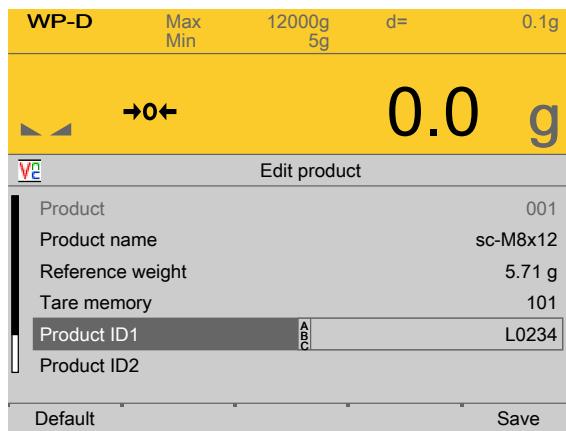

6. Select the third line using the cursor and confirm using the ► cursor key.
7. The reference weight is known: enter the weight using the keypad and confirm with the **OK** button.
8. The reference weight is not known: place the item to be weighed on the scale, press the [Weight] soft key and confirm with the **OK** button.
▷ The reference weight is displayed and added to the database.
9. Unload the scale.

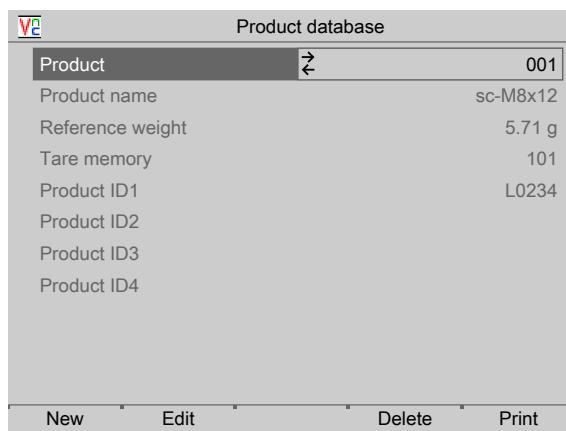

10. Select the fourth line using the cursor and confirm using the ► cursor key.

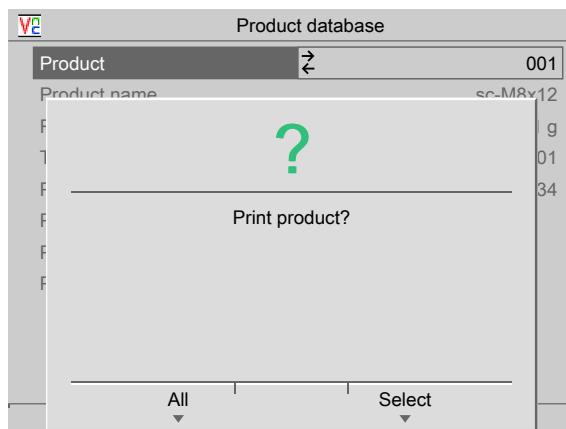

11. Select the tare from the tare database and confirm with the **OK** button.

12. If required, select the fifth line using the cursor and confirm using the **►** cursor key.
 13. Enter an additional entry using the keypad (max. 20 characters) and confirm with the **OK** button.
 14. Press the [Save] soft key to save the entry.

15. Press the [Print] soft key to print product data.

16. Press the corresponding soft key to finally print the product data.

```

Product database 19.02.2015 11:31:00
-----
Product 001
Product name sc-M8x12
Reference weight 5.71 g
Tare memory 101
Product ID 1 L0234
Product ID 2
Product ID 3
Product ID 4
-----
```

9.2.2 Edit product

Product database			
Product	001		
Product name	sc-M8x12		
Reference weight	5.71 g		
Tare memory	101		
Product ID1	L0234		
Product ID2			
Product ID3			
Product ID4			

New Edit Delete Print

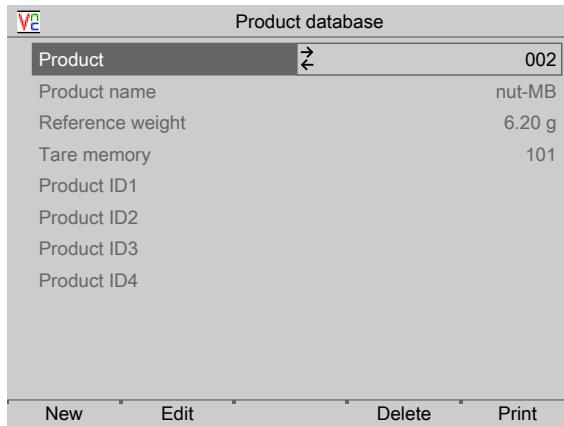

1. Press the [Edit] soft key to edit the selected product.

WP-D	Max Min	12000g 5g	d=	0.1g
→← 0.0 g				
Edit product				
Product	001			
Product name	sc-M8x12			
Reference weight	5.71 g			
Tare memory	101			
Product ID1	L0234			
Product ID2				

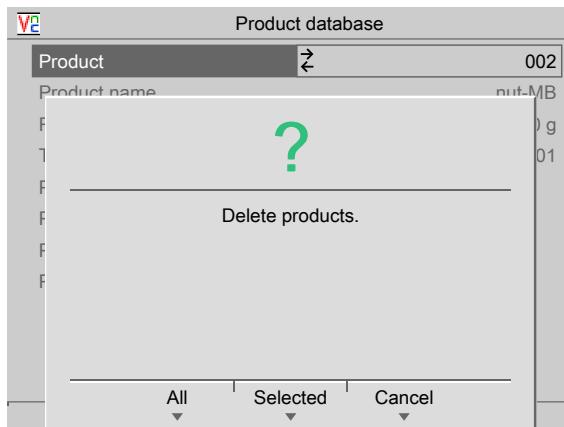

Default Save

2. Change the product as required, see also Chapter [9.2.1](#).
3. Press the [Save] soft key to save the entry.

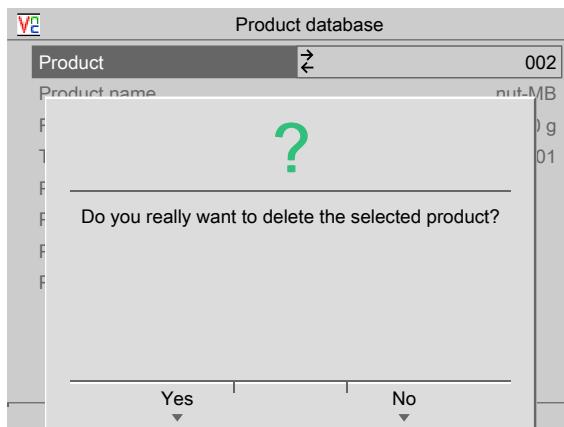

9.2.3 Delete product

1. Press the [Delete] soft key to delete the selected product.

2. For example, press the [Selected] soft key.

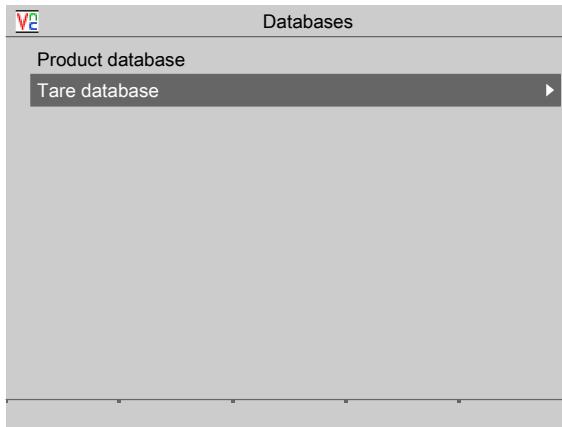

3. Press the [Yes] soft key to finally delete the selected product.

9.3 Tare database

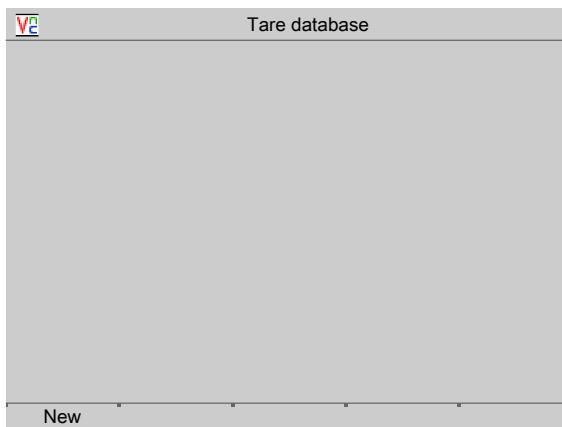

The database manages the preset tare values in the tare memory.

New entries can be added in the menu, available entries can be edited and deleted.

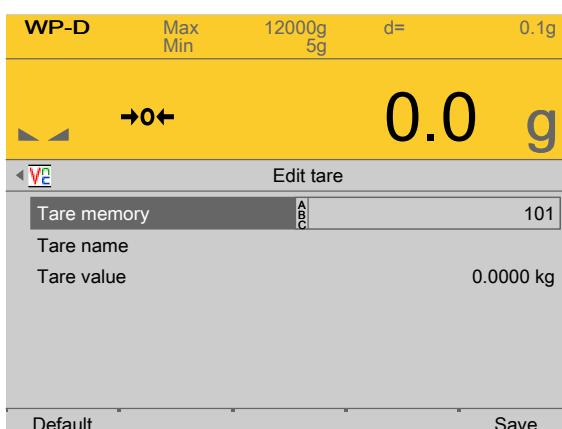

- Select and confirm [Tare database] using the cursor.

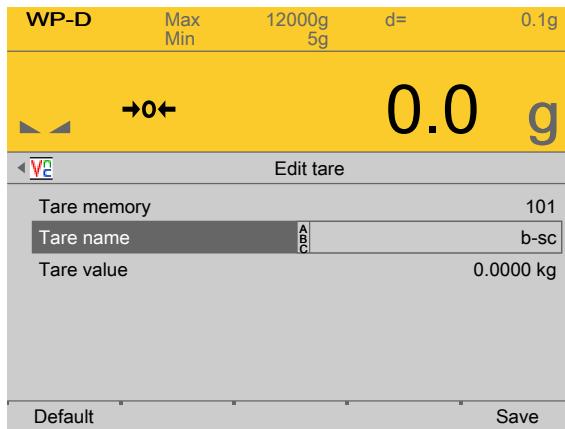

9.3.1 Create tare memory

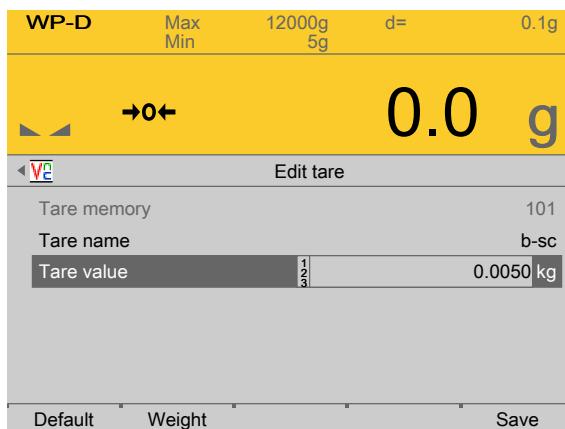

1. Press the [New] soft key to create a new tare memory.

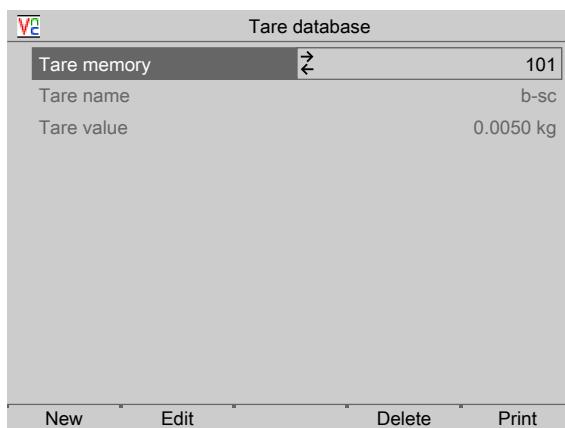

2. Confirm the first line with the ► cursor key.
3. Enter a short name using the keypad (max. 15 characters) and confirm with the OK button.

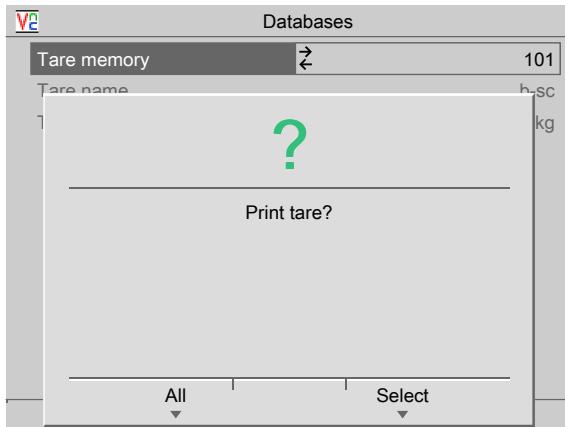

4. Select the second line using the cursor and confirm using the ► cursor key.
5. Enter a long name using the keypad (max. 20 characters) and confirm with the **OK** button.

6. Select the third line using the cursor and confirm using the ► cursor key.
7. The container weight is known: enter the weight using the keypad and confirm with the **OK** button.
8. The container weight is not known: place the container on the scale and press the [Weight] soft key and confirm with the **OK** button.
▷ The container weight (tare weight) is displayed and added to the database.
9. Unload the scale.

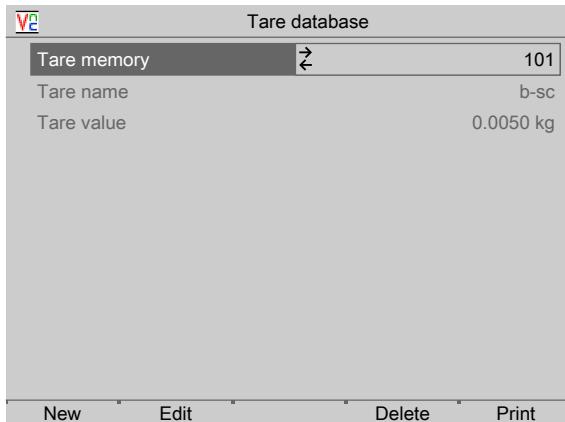

10. Press the [Print] soft key to print tare data.

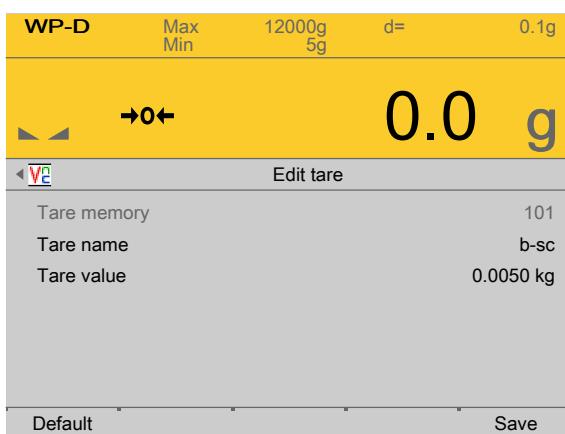

11. Press the corresponding soft key to finally print the tare data.

```
Tara database      19.02.2015 16:01:04
-----
Tara memory          101
Tara name           b-sc
Tara value          0.0050 kg
-----
```

9.3.2 Edit tare memory

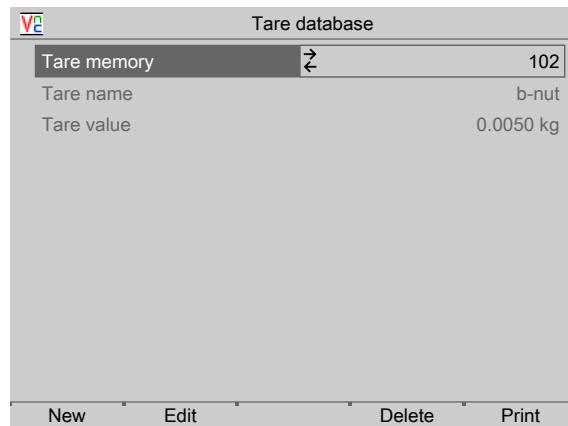

1. Press the [Edit] soft key to edit the selected tare memory.

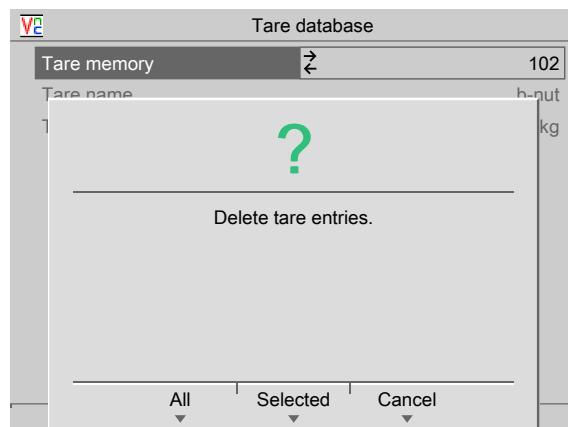

2. Change the tare memory as required, see also [9.3.1](#).
3. Press the [Save] soft key to save the entry.

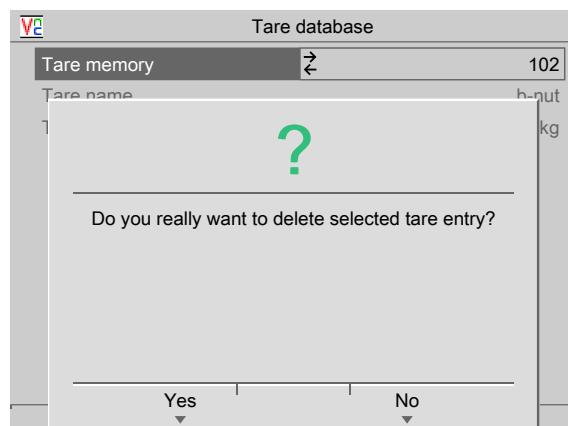

9.3.3 Delete tare memory

1. Press the [Delete] soft key to delete the selected tare memory.

2. For example, press the [Selected] soft key.

3. Press the [Yes] soft key to finally delete the selected tare memory.

10 Printouts

10.1 General notes

The following printouts are available in PR 5900 using the Count application:

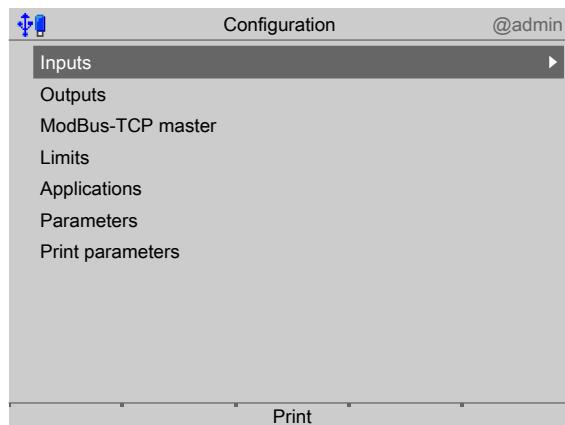

- Device configuration data, see PR 5900 operating instructions
- Count configuration data, see Chapter [10.2](#)

10.2 Count-Configuration data

The option is available to print out the Count configuration data. The configuration data is output to the printer configured in the [System setup] - [Connected devices] system menu under "General Devices" (see PR 5900 operating instructions).

The print width is limited to 39 characters per line. This means a ticket printer can also be used. When printing the first line, the program checks whether printing is possible. In the event of a printer failure during printing, a time-out of approximately 3 s is active for each print line.

The printout cannot be changed using "NiceLabelExpress." The printout reflects the current data status.

► Press the [Print] soft key or the button to print out the configuration.

10.3 Tickets

10.3.1 General notes

The configuration for tickets is performed in the [Configuration] - [Print parameters] - [Print template] operating menu, see Chapter [5.4.8](#).

To start printing, the application must be started.

A printout can be initiated by the following signals:

- Press the key.
- Activate the "Automatic printout of results" option.
- Press the M keys during the counting process.

10.3.2 Tickets and labels without NLE (NiceLabelExpress)

Example:

```

Test phase 1
Sequence number           35
Date/time                 23.02.2015-16:26:51
-----
Reference quantity        10 pcs
Reference weight          5.71 g

Gross                     221.5 g
Net                       171.4 g
Tare database              50.1 g
Quantity                  30
-----
```

10.3.3 Tickets and labels with NLE (NiceLabelExpress)

Tickets can be printed directly or using NLE. The names of the NLE files are:

- Individual printout: single.lbl
- Component print: mplus.lbl
- Total: msub.lbl

To create a user-defined ticket, the "NiceLabelExpress" program is required. All variable contents (e.g., weights) and invariable texts (e.g., "sequence number") for these tickets are transmitted to the ticket using variables. In many cases this enables the user to create language adjustments for NLE with "PoEdit". In this case, "NiceLabelExpress" does not need to be called up. A fixed structure of variables from the application is provided for "NiceLabelExpress."

If an NLE file is loaded into the device, it will always be printed using NiceLabelExpress if "Use NLE" has been activated.

Default variables

Variables for NLE	Data formats	Description Parameter content	Indivi- dual printout	Compo- nent print	Total
NowDate	STR10	Current date	X	X	X
NowTime	STR10	Current time	X	X	X
HTime	STR6	Heading for time	X	X	X
ProdNo	STR20	Product number	X	X	X
ProdNam	STR20	Product name	X	X	X
TareNam	STR20	Tare memory name	X	X	
HID1	STR20	Heading for ID1	X	X	X
ID1	STR20	Identifier ID1	X	X	X

Variables for NLE	Data formats	Description Parameter content	Indivi- dual printout	Compo- nent print	Total
HID2	STR20	Heading for ID2	X	X	X
ID2	STR20	Identifier ID2	X	X	X
HID3	STR20	Heading for ID3	X	X	X
ID3	STR20	Identifier ID3	X	X	X
