

LEVEL MATTERS

Did you know?

If there is a power outage, water does not stop filling wet wells and lift stations. When the power comes back, pumps' "on" setpoints may have been reached or exceeded, but a sudden demand for too much power can wreak havoc. The SITRANS LT500 HydroRanger ensures pumps do not all start at the same time so that pump operation can resume safely. If needed, all enabled data collected prior to the power loss can be retrieved from the micro storage card.

- **Pump start delay:** Delay between starts of multiple pumps with the same setpoint to minimize power surges and risk of power overloads.
- **Power resumption delay:** Delay between starts of multiple pumps due to power returning to the system.
